State of Australian  
University Research  
Volume 1 ERA National Report

# MINISTER'S FOREWORD

I am pleased to present the *State of Australian University Research 2015–16: Volume 1 ERA National Report (ERA 2015)*, a comprehensive assessment, by discipline, of the quality of research conducted in Australia's higher education institutions.

In Australia, and around the world, high quality research is driving innovation that saves lives, answers social and environmental imperatives, improves economic productivity and growth, and creates the jobs of the future. The Australian Government will invest \$9.7 billion in 2015–16 into research across education, industry, health, defence, environment and agriculture that will help ensure the Australia of the future is agile, creative and innovative, and able to compete with the best in the world.

ERA 2015's internationally benchmarked data shows that Australia's research effort, conducted in universities across the nation and in every broad discipline group, continues to perform well—above world standard.

It also showcases the rich research diversity, strength and excellence across the spectrum of Australian universities.

With ERA 2015, Australia now has longitudinal data on our research effort since 2003 — an invaluable resource for universities, industry and other users of research, and policymakers.

This will be used to help map progress in meeting the Australian Government's Science and Research Priorities, and corresponding Practical Research Challenges.

ERA is also a quality assurance mechanism for Australia's universities, which reported \$9.9 billion in research income between 2011 and 2013.

Encouraging stronger incentives for research–industry collaboration and better translating research into commercial outcomes — as promoted by the Government's Boosting the Commercial Returns from Research strategy — is a high priority so as to maximise the economic and social outcomes of Australia's high-quality research.

I congratulate the Australian Research Council and all of the universities that contributed to ERA 2015 for their commitment to Australian research investment, performance, and discovery.

A handwritten signature in blue ink, which reads "Simon Birmingham". The signature is fluid and cursive.

**Senator the Hon Simon Birmingham**  
**Minister for Education and Training**

# CEO'S FOREWORD

This is the inaugural *State of Australian University Research 2015–16*.

In the past, the ARC has released the ERA results through an ERA National Report and Volume 1 of this *State of Australian University Research 2015–16* continues that tradition. It comprehensively details the quality of Australian university research benchmarked against world standards.

With three rounds of ERA now complete, this unique dataset covers all Australian university research outputs, staffing and activity from 2003 to 2013, and research income and research application data from 2006 to 2013.

Over the coming year the ARC will produce additional volumes based on analyses of this longitudinal data, which will provide further insights into the state of Australian university research. Volume 2 will be released in April 2016.

ERA is the primary mechanism to assure Government of its research investment in Australian universities.

ERA 2015 results clearly demonstrate that Australian universities are diverse and that much of their research meets world standard or better.

This report identifies the excellence in research across a broad range of universities and the outstanding performances in areas of specialisation. Overall the quality of Australian university research continues to improve.

The data also shows solid growth of the sector from the previous ERA round. For ERA 2015 data for over 430,000 unique research outputs and 67,000 researchers was collected from the 41 participating universities. There were 2,460 units of evaluation assessed, including 1,802 four-digit and 658 two-digit disciplines.

ERA would not be possible without the support the ARC receives from the sector. In addition to sector-wide consultations to help refine the ERA 2015 process and the work of all universities during the submission stages, there were 155 Research Evaluation Committee members and about 1,300 peer reviewers from Australia and overseas appointed to conduct the evaluations.

This strong sector engagement maintains the confidence that ERA is the most rigorous and effective measure of research quality in Australia's universities. I would like to take this opportunity to thank all those involved at various stages of the ERA process and in particular the ARC ERA staff.

I strongly encourage universities, industry and other research users to make use of the valuable information that ERA provides.

A handwritten signature in black ink, appearing to read 'Aidan Byrne'.

**Professor Aidan Byrne**

**Chief Executive Officer**

*Australian Research Council*

# GUIDE TO THE REPORT

The *State of Australian University Research 2015–16: Volume 1 ERA National Report* presents a comprehensive assessment by discipline of the quality of research activity conducted in Australia's higher education institutions. This volume provides information on the discipline-specific research activity of each eligible Australian higher education institution (see **Appendix 1: Eligible Institutions**), and the contribution of each discipline to the national landscape.

The *ERA National Report* is divided into six sections which are listed below:

- › The **Introduction** provides an overview of the ERA framework and methodology
- › **Section 1: ERA 2015 National Overview** provides a national summary of world standard research performance, a summary of all data submitted for the purposes of the ERA evaluation, some comparative data for ERA 2010, ERA 2012 and ERA 2015, and some preliminary analysis of the ERA 2015 submission data
- › **Section 2: Overview by Two-Digit Fields of Research (FoR) Code** provides a summary of two-digit FoR codes for the suite of indicators presented in ERA
- › **Section 3: Results by Fields of Research (FoR) Code** provides a summary of evaluation outcomes and data for each FoR code, including key volume and activity information and ERA rating outcomes
- › **Section 4: National Profiles by Fields of Research Code** provides a detailed breakdown of ERA data by two- and four-digit FoR codes
- › **Section 5: ERA 2015 Institution Report** provides the ERA ratings for each assessable Unit of Evaluation (UoE) for each of the 41 institutions eligible for ERA.

# Introduction

In 2015, the Australian Research Council (ARC) conducted the third full Excellence in Research for Australia (ERA) evaluation. The evaluation collected data regarding the quality of research activity undertaken at all eligible higher education research institutions<sup>1</sup> within the ERA 2015 reference period. These data were then evaluated by eight Research Evaluation Committees (RECs), established at a discipline cluster level, and comprised of distinguished and internationally-recognised researchers with expertise in research evaluation.<sup>2</sup>

This National Report provides an overview of the data collected and the outcomes of the ERA 2015 evaluation process.

## Objectives of ERA

ERA aims to identify and promote excellence across the full spectrum of research activity, including both discovery and applied research, within Australian higher education institutions.

The objectives of ERA are to:

1. establish an evaluation framework that gives government, industry, business and the wider community assurance of the excellence of research conducted in Australia's higher education institutions
2. provide a national stocktake of discipline-level areas of research strength and areas where there is opportunity for development in Australia's higher education institutions
3. identify excellence across the full spectrum of research performance
4. identify emerging research areas and opportunities for further development
5. allow for comparisons of Australia's research nationally and internationally for all discipline areas.

## Use of Information from ERA

ERA provides Government, universities, industry, and prospective students with valuable information about research performance in Australian universities. For example, ERA data and outcomes:

- › inform a range of advice to Government across the various portfolios of Government
- › assist universities with strategic planning
- › inform funding allocations for Sustainable Research Excellence in Universities (SRE) block grants
- › specifically inform the development of research policy in Government and the wider sector, including:
  - › Research Engagement for Australia: Measuring Research Engagement between Universities and End Users (Australian Academy of Technological Sciences and Engineering)
  - › Mapping Australia's Science and Research Priorities (Department of Industry and Science)
  - › Mapping the Humanities, Arts and Social Sciences in Australia (Australian Academy of the Humanities)
  - › Development of the Defence Trade Controls Act (Department of Defence)
  - › Draft National Strategy for International Education (Department of Education and Training).

<sup>1</sup> See **Appendix 1** for a list of eligible institutions.

<sup>2</sup> A list of ERA 2015 REC members is available at: [arc.gov.au/era-2015-research-evaluation-committee-rec-members](http://arc.gov.au/era-2015-research-evaluation-committee-rec-members)

## Definition of Research

For the purposes of ERA, research is defined as the creation of new knowledge and/or the use of existing knowledge in a new and creative way so as to generate new concepts, methodologies, inventions and understandings. This could include synthesis and analysis of previous research to the extent that it is new and creative.

Institutions must ensure that all research outputs submitted to ERA meet this definition of research. Outputs that do not meet this definition may be excluded from submissions during the ERA submission process or, where they are not excluded from submissions, their inclusion may adversely affect the quality rating assigned by RECs during the evaluation process.

## Fields of Research (FoR) Codes

For the purposes of ERA, disciplines are defined as two- and four-digit Fields of Research (FoRs) codes as identified in the *Australia and New Zealand Standard Research Classification (ANZSRC) 2008* released by the Australian Bureau of Statistics and Statistics New Zealand. The ANZSRC provides 22 two-digit FoR codes, 157 four-digit FoR codes, and an extensive range of six-digit codes.

The FoR codes as used in ERA 2015 are listed in **Appendix 2**. ERA undertakes evaluation at both the two- and four-digit FoR code level. Institutions submitted data to ERA at the four-digit level and these were aggregated to form the two- and four-digit Units of Evaluation (UoEs).

The two-digit FoR code is the highest level of the ANZSRC hierarchy; it relates to a broad discipline field, for example, Physical Sciences (02) or History and Archaeology (21). A two-digit FoR code consists of a collection of related four-digit FoR codes.

The four-digit FoR code is the second level of the ANZSRC hierarchy and relates to a specific discipline field of a two-digit FoR code. For example, Astronomical and Space Sciences (0201) or Archaeology (2101).

## ERA 2015 Reference Periods

Data for the following reference periods was collected for ERA 2015:

Data Type	Reference Period	Years
Research Outputs	1 January 2008 – 31 December 2013	6
Research Income	1 January 2011 – 31 December 2013	3
Applied Measures	1 January 2011 – 31 December 2013	3
Esteem Measures	1 January 2011 – 31 December 2013	3
Staff Eligibility Period	As at 31 March 2014	Census Date

## ERA 2015 Evaluation Process

Evaluation of data submitted for ERA 2015 was undertaken by eight Research Evaluation Committees (RECs),<sup>3</sup> broadly representative of eight discipline clusters. The ERA 2015 Research Evaluation Committees were comprised of 155 individual distinguished and internationally recognised researchers from Australia and overseas, with expertise in their fields and in research evaluation.

Further details concerning the ERA 2015 Evaluation process, including moderation and conflict of interest procedures, can be found in the *ERA 2015 Evaluation Handbook*.<sup>4</sup>

## ERA 2015 Discipline Clusters

The ERA 2015 evaluation collected data and undertook evaluations across eight discipline clusters. Discipline clusters are a construct developed primarily to assist in balancing workload across the various FoR codes. The discipline clusters for ERA 2015 are:

- › Biological and Biotechnological Sciences (BB)
- › Humanities and Creative Arts (HCA)
- › Economics and Commerce (EC)
- › Education and Human Society (EHS)
- › Engineering and Environmental Sciences (EE)
- › Mathematical, Information and Computing Sciences (MIC)
- › Medical and Health Sciences (MHS)
- › Physical, Chemical and Earth Sciences (PCE).

See **Appendix 2** for a full list of FoR codes and their discipline cluster for ERA 2015 purposes.

## ERA 2015 Indicators

ERA is based on the principle of expert review informed by indicators. The ERA 2015 evaluations undertaken by RECs were informed by four broad categories of indicators:

### 1. Indicators of research quality

Research quality was considered on the basis of a publishing profile, citation analysis, ERA peer review, and peer reviewed Australian and international research income

### 2. Indicators of research activity

Research activity is considered on the basis of research outputs, research income and other research items within the context of the profile of eligible researchers

<sup>3</sup> See [arc.gov.au/era-2015-research-evaluation-committee-rec-members](http://arc.gov.au/era-2015-research-evaluation-committee-rec-members) for a list of REC members.

<sup>4</sup> The ERA 2015 Evaluation Handbook is available from: [arc.gov.au/excellence-research-australia](http://arc.gov.au/excellence-research-australia)

### 3. Indicators of research application

Research application is considered on the basis of research commercialisation income, patents, Plant Breeder's Rights, registered designs, and National Health and Medical Research Council (NHMRC) Endorsed Guidelines. Some other measures, such as publishing behaviour and some other categories of research income, can also provide information about research application

### 4. Indicators of recognition

Research recognition was considered on the basis of a range of esteem measures.

More detailed information about each of the ERA indicators is available in the *ERA 2015 Evaluation Handbook*.

The ERA indicators are underpinned by the ERA Indicator Principles. The ERA Indicator Principles were developed by the ARC in accordance with international best practice and informed by the ERA Indicator Development Group with analytical testing of data from the Australian higher education sector.

The ERA indicator suite was developed to align with the research behaviours of each discipline. For this reason, there are differences in the selection of indicators. The indicators that apply to each discipline (as defined by two- or four-digit FoRs) are shown in the *ERA 2015 Discipline Matrix*.<sup>5</sup>

## Unit of Evaluation

The Unit of Evaluation for ERA is the research discipline for each institution as defined by FoR codes.

Evaluations occurred at the two- and four-digit FoR code levels for UoEs that met the low volume threshold. UoEs do not correspond to named disciplines, departments or research groups within an institution.

National-level profiles of disciplines aggregated across institutions at the two- and four-digit FoR code level include information from all submitting institutions, including from those which did not meet the low volume threshold and were therefore not assessed.

## Low Volume Threshold

Two- and four-digit UoEs were only assessed where there was a meaningful level of data to be evaluated. An institution is only evaluated in ERA in a two- or four-digit discipline if the number of research outputs submitted reaches the low volume threshold.

For disciplines where citation analysis was used, the low volume threshold was 50 apportioned indexed journal articles. No evaluation was conducted for the FoR at a given institution if the submitted number of apportioned indexed journal articles over the six-year research outputs reference period was fewer than 50 in any two- or four-digit FoR.

For disciplines where peer review was used, the low volume threshold was 50 apportioned weighted outputs. For these disciplines, books were given an effective weighting of 5:1 compared with other research outputs. Books were weighted only for the purposes of determining the low volume threshold; in every other instance they were regarded as a single research output. Portfolios of works were counted as one output for the purposes of determining the low volume threshold. No evaluation was conducted for an FoR at a given institution where, over the six-year research outputs reference period, there were less than the equivalent of 50 apportioned weighted research outputs submitted.

<sup>5</sup> The *ERA 2015 Discipline Matrix* is available at: [arc.gov.au/era-2015-submission-documents](http://arc.gov.au/era-2015-submission-documents)

For some FoRs at some institutions, there was insufficient research volume to undertake a valid analysis at the four-digit FoR level, but sufficient research volume at the two-digit FoR level. In these instances, evaluation took place at the two-digit FoR level only.

Where the low volume threshold was not met, the UoE for a given institution was automatically treated as 'not assessed due to low volume', and is reported as 'n/a'. This means that data submitted on research outputs, research income, applied measures and esteem measures for the relevant two- or four-digit FoR for that institution was collected but not evaluated under ERA 2015. The institution, therefore, was not considered as research active for that discipline for the purposes of ERA 2015. However, the data submitted still contributed to the construction of the ERA benchmarks and all ERA data was aggregated for national-level reporting irrespective of whether any FoRs within a specific institution met the low volume threshold.

## ERA Rating Scale

ERA utilises a five-point rating scale. The rating scale is broadly consistent with the approach taken in research evaluation processes in other countries to allow for international comparison.

Rating	Descriptor
5	The Unit of Evaluation profile is characterised by evidence of outstanding performance <b>well above world standard</b> presented by the suite of indicators used for evaluation.
4	The Unit of Evaluation profile is characterised by evidence of performance <b>above world standard</b> presented by the suite of indicators used for evaluation.
3	The Unit of Evaluation profile is characterised by evidence of average performance <b>at world standard</b> presented by the suite of indicators used for evaluation.
2	The Unit of Evaluation profile is characterised by evidence of performance <b>below world standard</b> presented by the suite of indicators used for evaluation.
1	The Unit of Evaluation profile is characterised by evidence of performance <b>well below world standard</b> presented by the suite of indicators used for evaluation.
n/a	Not assessed due to low volume. The number of research outputs does not meet the volume threshold standard for evaluation in ERA.

## Notes on the Rating Scale

- › 'World Standard' refers to a quality standard. It does not refer to the nature or geographical scope of particular subjects, or to the locus of research nor its place of dissemination.
- › Each point within the rating scale represents a quality 'band'. For example, one UoE might be rated highly within the '4' band and another rated lower within the same band, but the rating for both will be a '4'. Only whole ratings are given (not 4.2, 4.5 etc).
- › The 'banding' of quality ratings assists RECs in determining a final rating. If, for example, a Unit of Evaluation has a preliminary rating at the top margin of the '4' band based on the assessment of the quality of the research outputs, other indicators (e.g. income or esteem measures) may be sufficient to raise the rating into the '5' band. The lack of such indicators will not, however, be used to lower a rating.
- › The ERA evaluation measures research quality, not scale or productivity. Volume information is presented to the RECs for the purposes of providing context to the research.
- › The methodology and rating scale allow for UoEs with different volumes of output to achieve the same rating. So, for example, a UoE with a small number of outputs can achieve a rating of 5 where the UoE meets the standard for that rating point, similar to a UoE with a large number of outputs.
- › Each UoE is assessed against the absolute standards of the rating scale, not against other UoEs. One of the key objectives of ERA is to identify excellence across the full spectrum of research performance.
- › RECs exercise their knowledge, judgment and expertise to reach a single rating for each UoE. In reaching a rating, RECs take account of all of the supporting evidence which is submitted for the UoE. RECs do not make comment about the contributions of individual researchers.
- › The rating for each UoE reflects the REC's expert and informed view of the characteristics of the UoE as a whole. In all cases the quality judgments relate to all of the evidence, including the entire indicator suite, and the ERA rating scale. In order to achieve a rating at a particular point on the scale, the majority of the output from the UoE will normally be expected to meet the standard for that rating point. Experience has demonstrated that there is normally a variety of quality within a UoE.

Further details concerning the ERA evaluation process can be found in the *ERA 2015 Evaluation Handbook*.

# Additional Reporting for ERA 2015

## Gender Data

Institutions were required to submit gender data for each eligible researcher. Gender data was used for aggregate reporting and analysis purposes only. This data was not made available to peer reviewers or Research Evaluation Committees (RECs) and did not form part of the evaluation process.

## Open Access

Institutions were required to state whether a research output is available in an open access repository. Open access data was used for aggregate reporting and analysis purposes only. This data was not made available to peer reviewers or Research Evaluation Committees (RECs) and did not form part of the evaluation process.

For the purpose of ERA 2015, an open access repository is as per the ARC's Open Access Policy.

See: [arc.gov.au/arc-open-access-policy](http://arc.gov.au/arc-open-access-policy).

## New Category of Non-Traditional Research Outputs

There is a new category of non-traditional research outputs for ERA 2015, entitled 'research report for an external body'. It consists of four subcategories of reports: Public Sector; Industry; Not-For-Profit; and Other.

Non-traditional research outputs (NTROs) only apply to some disciplines. The exception is the NTRO category 'research reports for an external body' which applies to all disciplines. However, for citation disciplines, while 'research reports for an external body' form part of the publishing profile they do not form part of the citation analysis information. In addition, 'research reports for an external body' submitted within citation fields of research will not be eligible for peer review.

Further detail on the changes to the submission guidelines for ERA 2015 can be found in the *ERA 2015 Submission Guidelines*.

## Key ERA 2015 Documents

There are several documents that provide more detailed information about various aspects of the ERA 2015 evaluation. These include:<sup>6</sup>

- › *ERA 2015 Submission Guidelines* — provide guidance to institutions about ERA 2015 submission rules and components
- › *ERA 2015 Discipline Matrix* — shows the indicators that apply to each FoR code
- › *ERA 2015 Evaluation Handbook* — provides detailed information about the ERA 2015 indicators, evaluation approach and process
- › the *ERA 2015 Submission Journal List, Submission Conference List and Submission Publisher List* (copies of these lists were supplied to participating universities in July 2014).

Further information about ERA is available on the ARC website at: [arc.gov.au/era-2015](http://arc.gov.au/era-2015)

<sup>6</sup> ERA 2015 key documents are available at: [arc.gov.au/excellence-research-australia](http://arc.gov.au/excellence-research-australia)

# Use of the ERA National Report

The *ERA National Report* presents data submitted as part of a comprehensive assessment by discipline of the research quality and research activity within Australia's higher education institutions.

## Coverage

ERA retrospectively evaluates the quality of research conducted within the specific reference periods (as shown previously). As the ERA 2015 research outputs reference period ended on 31 December 2013, research quality may have changed since that time.

## Comparison across Data Items

Each UoE is assessed against the ERA rating scale. As no comparisons are made between UoEs, ERA ratings cannot be used as a ranking device. Further, as each ERA rating point might include a range of performances, and the gap between rating points is not defined, it is not appropriate to average ratings even within disciplines.

ERA has been designed to provide flexibility for, and recognition of, discipline-specific research behaviours at both the two- and four-digit FoR levels rather than comparison between disciplines or disciplinary clusters. ERA evaluations are conducted by discipline experts interpreting the indicators for each UoE in the context of their own expert knowledge of the discipline. Different indicators apply to each discipline, as outlined in the *ERA 2015 Discipline Matrix*. For this reason it is not appropriate to make productivity statements about or comparisons between disciplines.

Where possible the data presented in this report is de-duplicated. This does not represent the exact data submitted to ERA 2015 for the purposes of evaluation (which potentially contained duplicate data submitted by multiple institutions).

**Please note: numbers are generally rounded to one decimal place in tables throughout this report and income is rounded to whole dollars. Totals may be different to the sum of parts due to rounding.**

**Section 1** provides a national summary of research performance, a summary of all data submitted for the ERA 2015 evaluation, a snapshot of comparative data for ERA 2010, ERA 2012 and ERA 2015, and some preliminary analyses of selected ERA 2015 submission data.

## Research Quality

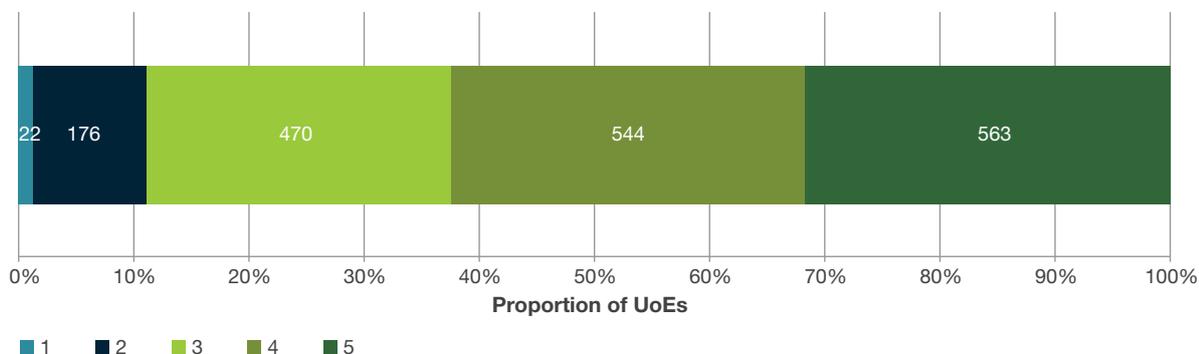

This sub-section presents the research quality results from ERA 2015. It summarises the ratings results for all four-digit Units of Evaluation (UoEs), then presents a number of analyses that highlight areas of research excellence in Australia's eligible institutions. It then shows the results of the two-digit evaluations. The final four charts display the full array of results at the four-digit level—for every assessed UoE and each four-digit FoR code.

### Research quality — four-digit UoEs

Of the 1,775 four-digit UoEs that were rated during ERA 2015, 563 (32 per cent) attracted a rating of 5 (i.e. well above world standard). A further 544 (31 per cent) received a rating of 4—above world standard—while 470 (26 per cent) were rated 3—at world standard. Overall, 62 per cent of four-digit UoEs were rated above or well above world standard.

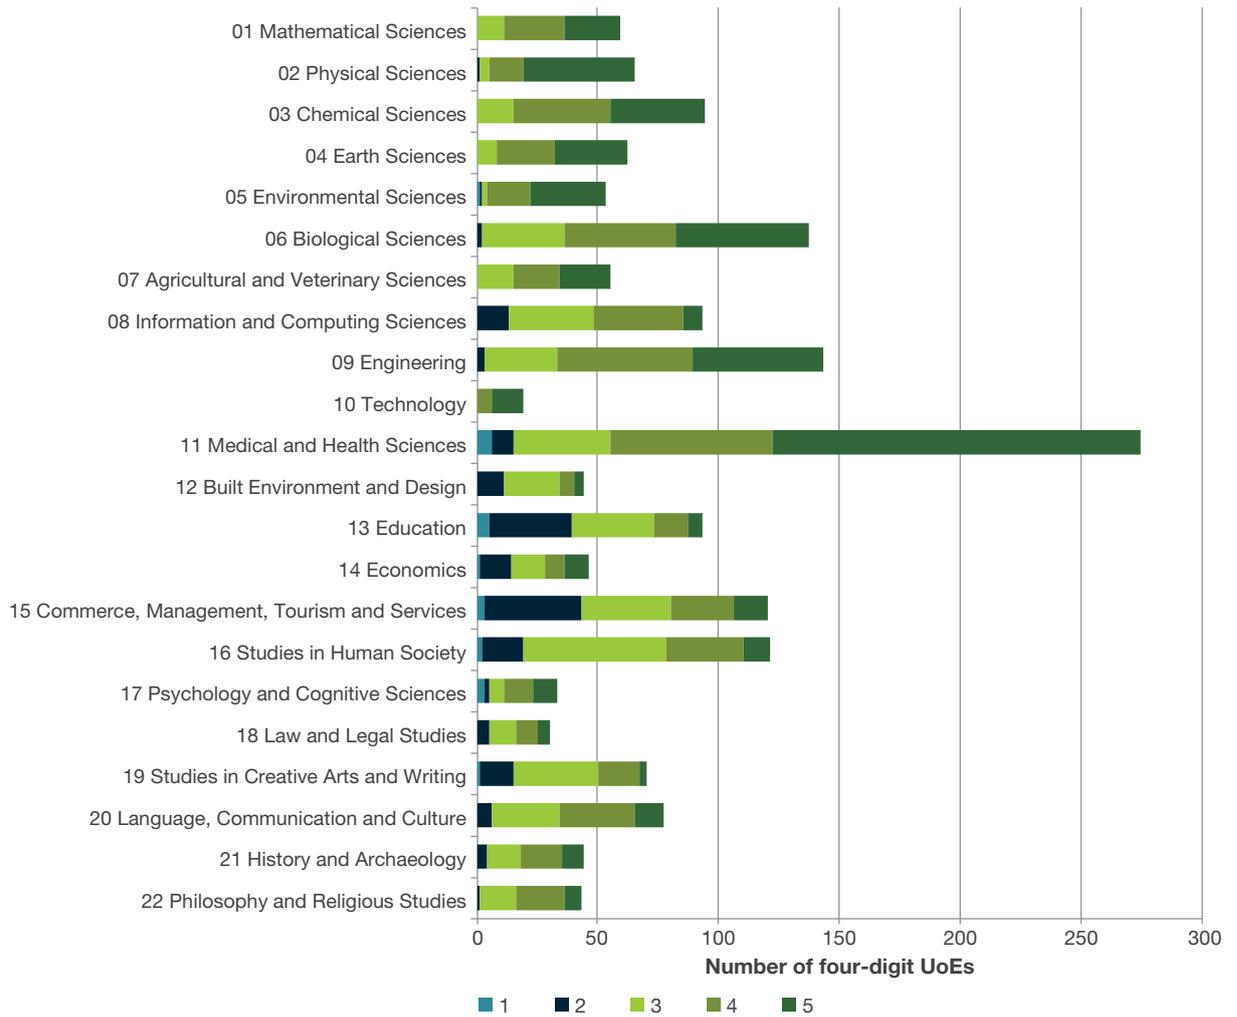

The number of assessed UoEs and the distribution of ratings among these UoEs varied by discipline. In absolute terms, 11 Medical and Health Sciences had the largest number of four-digit UoEs (274). The FoR 10 Technology had the fewest (19), but achieved excellent results: all 19 were rated above or well above world standard.

#### DISTRIBUTION OF RATINGS ACROSS ALL FOUR-DIGIT UOES

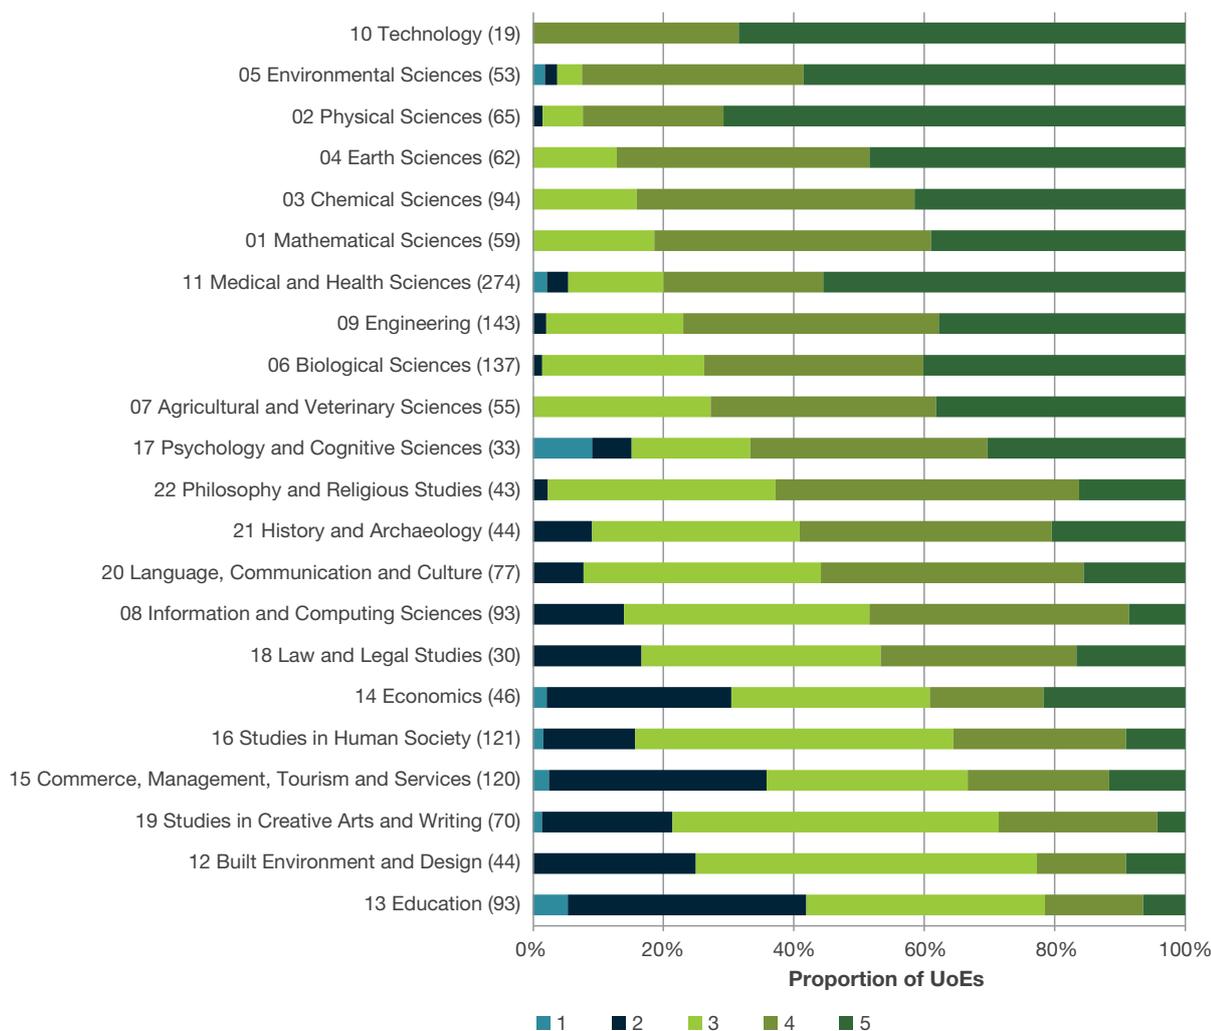

*Note: Numbers in bar chart show the number of four-digit UoEs that received each rating.*

**UOE RATINGS (AGGREGATED FOUR-DIGIT RESULTS, GROUPED BY TWO-DIGIT FOR CODE)**

The following chart shows the percentage distribution of four-digit UoEs, allowing comparisons between disciplines of different sizes. The FoRs 10 Technology, 05 Environmental Sciences and 02 Physical Sciences each had more than 90 per cent of their underlying four-digit UoEs rated as 4 or 5.

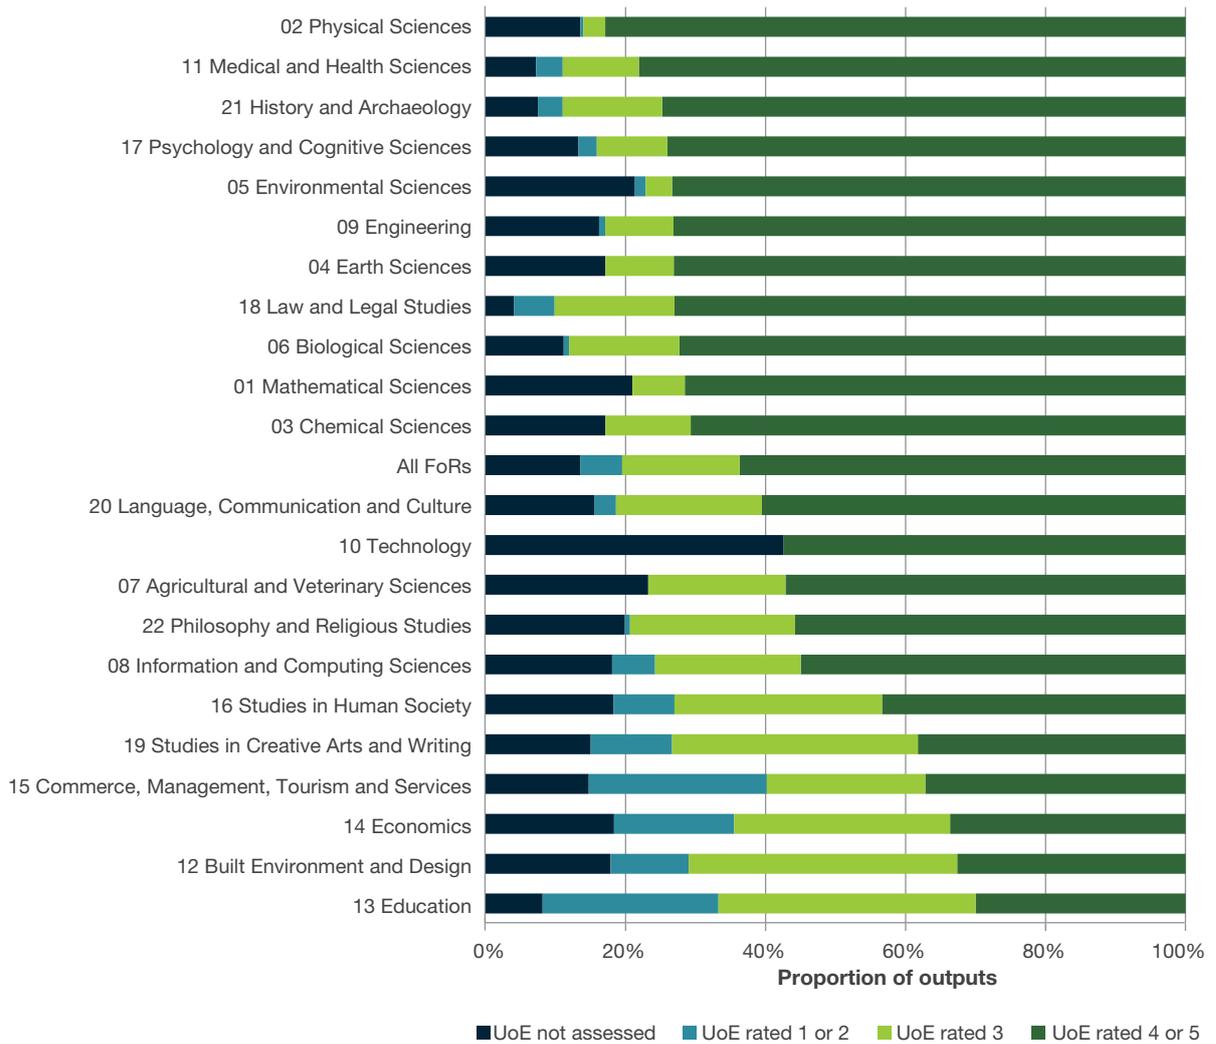

**DISTRIBUTION OF RATINGS FOR FOUR-DIGIT UOES (AGGREGATED FOUR-DIGIT RESULTS, GROUPED BY TWO-DIGIT FOR CODE)**

Notes: FoRs are ordered by the proportion of four-digit UoEs that received a rating of 4 or 5. The numbers in the brackets following the FoR name show the total number of four-digit UoEs that were rated in that two-digit FoR.

Another approach to identifying research excellence across disciplines is to consider the national distribution of all outputs that were submitted for assessment. In doing so, it is important to distinguish between the peer review and the citation disciplines. In peer review disciplines, this refers to all eligible outputs, while in citation disciplines, this refers to indexed journal articles. The figure below shows that nearly two-thirds (64 per cent) of these outputs were in UoEs rated 4 or 5 (above or well above world standard). Eleven two-digit disciplines had at least two-thirds of their outputs contributed to UoEs rated 4 or 5.

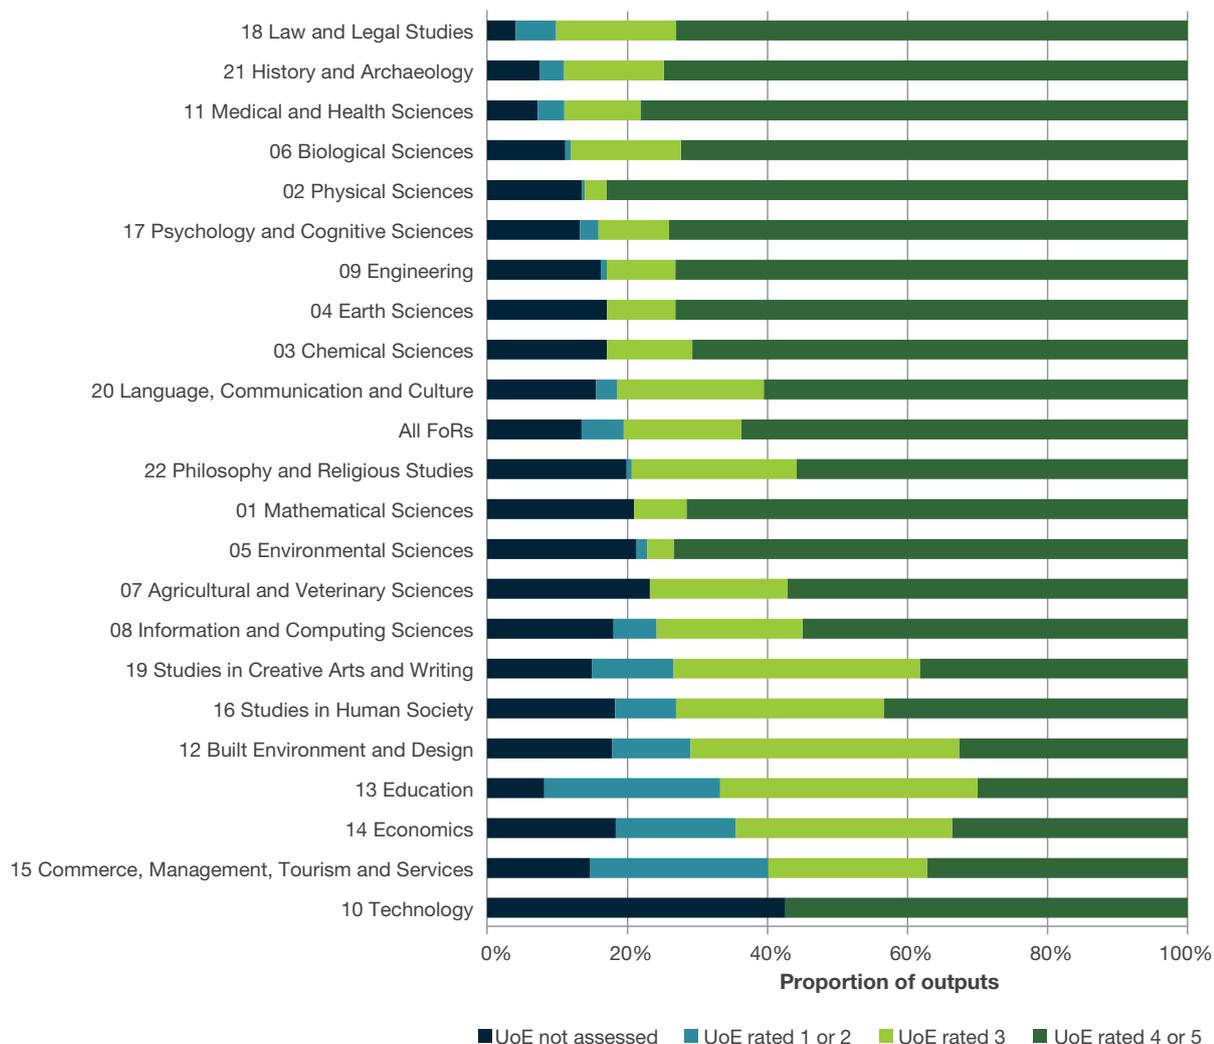

**DISTRIBUTION OF OUTPUTS BY FOUR-DIGIT UOE RATING (AGGREGATED FOUR-DIGIT RESULTS, GROUPED BY TWO-DIGIT FOR CODE)**

Note: FoRs are ordered by the proportion of outputs submitted for UoEs that received a rating of 4 or 5.

The chart below is the same as the previous chart, but disciplines are sorted by the proportion of outputs in UoEs that received a rating of 3, 4 or 5 (rather than just 4 and 5). Overall, just over 80 per cent of these outputs were in UoEs that were rated at or above world standard. Less than a fifth of these outputs were in UoEs that were either not assessed or were submitted by UoEs rated below world standard (1 or 2).

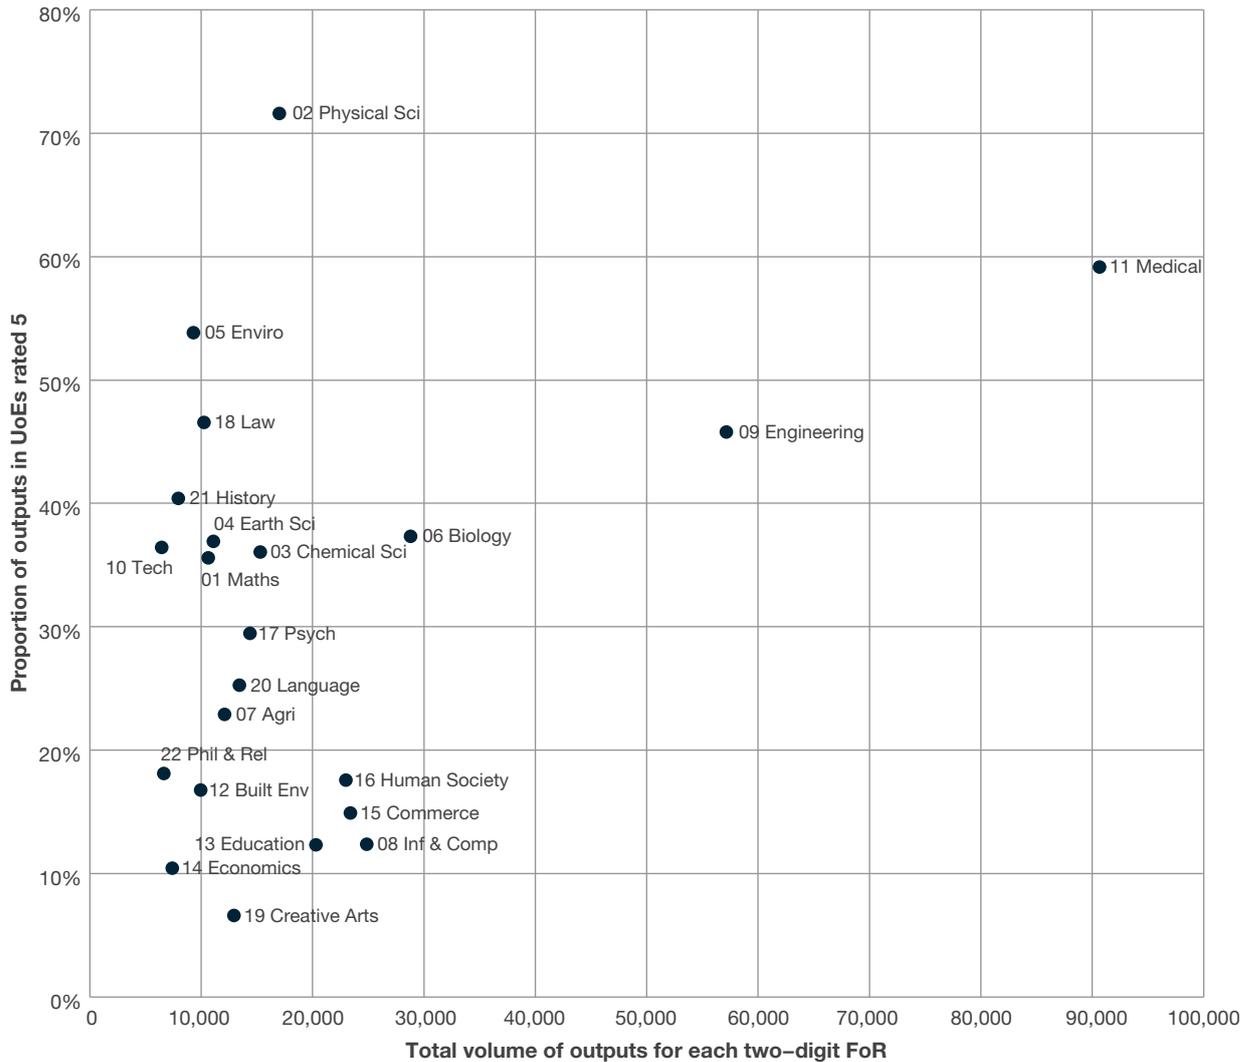

**DISTRIBUTION OF OUTPUTS BY FOUR-DIGIT UOE RATING (AGGREGATED FOUR-DIGIT RESULTS, GROUPED BY TWO-DIGIT FOR CODE)**

Note: FoRs are ordered by the proportion of outputs submitted for UoEs that received a rating of 3, 4 or 5.

The following chart plots disciplines along the vertical axis according to the proportion of their outputs that were submitted by UoEs that received a 5 rating. Results are shown for each two-digit FoR, but each is an aggregation of ratings and volume from the underlying four-digit UoEs. The plot also indicates the scale of the national research effort in each discipline by showing the total volume of outputs for each two-digit FoR (for the six-year reference period, along the horizontal axis).

### PROPORTION OF OUTPUTS IN UOES RATED 'WELL ABOVE WORLD STANDARD' (5) VS. DISCIPLINE VOLUME

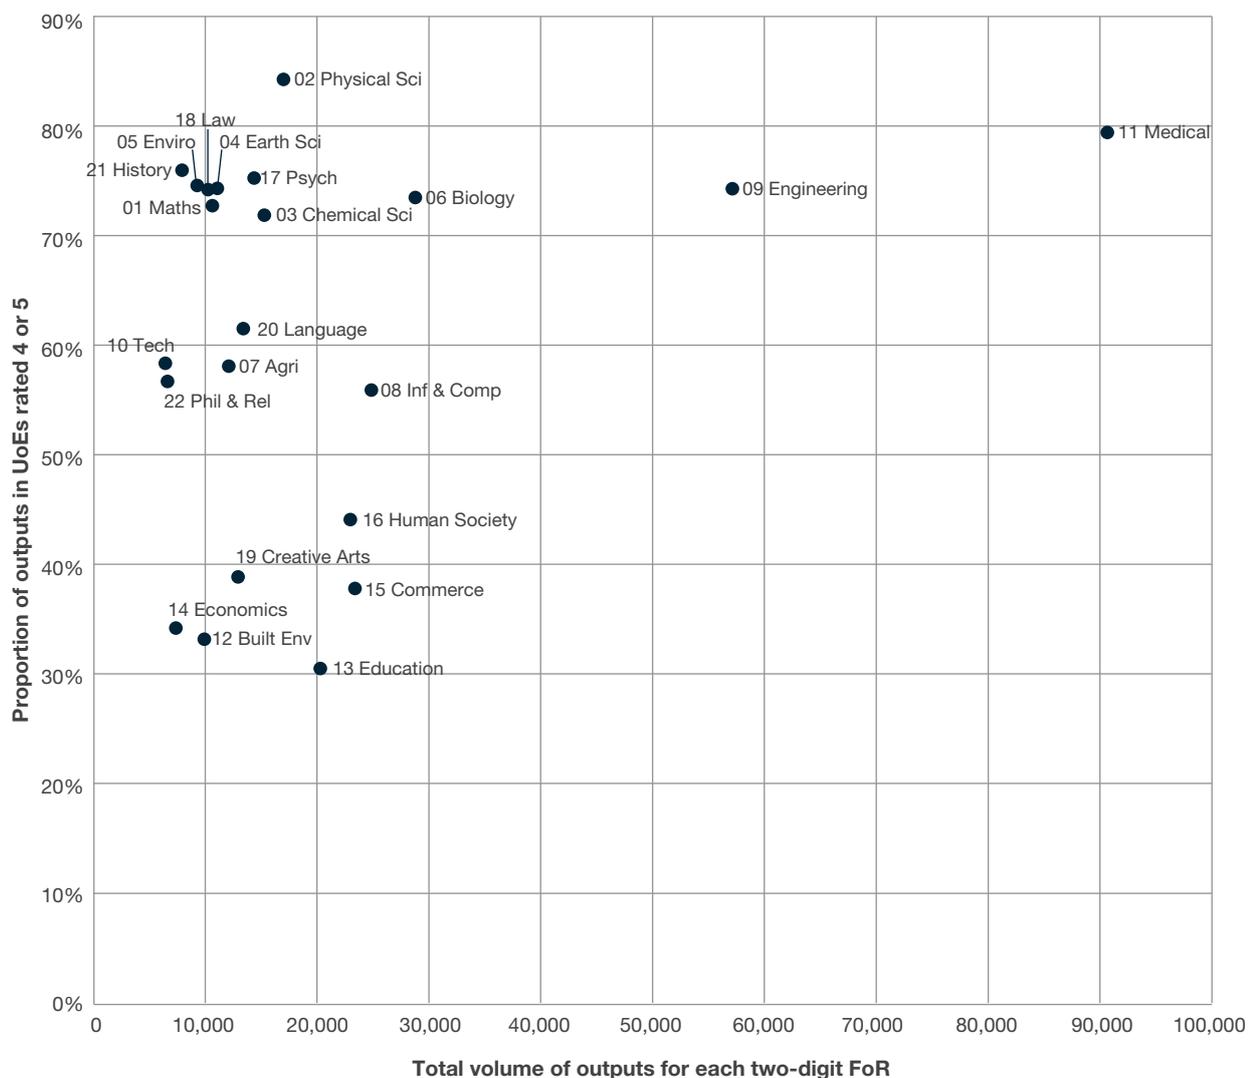

Note: Output volume includes all output types, no weighting is applied.

The following FoR abbreviations have been used: 01 Maths = Mathematical Sciences; 02 Physical Sci = Physical Sciences; 03 Chemical Sci = Chemical Sciences; 04 Earth Sci = Earth Sciences; 05 Enviro = Environmental Sciences; 06 Biology = Biological Sciences; 07 Agri = Agricultural and Veterinary Sciences; 08 Inf & Comp = Information and Computing Sciences; 10 Tech = Technology; 11 Medical = Medical and Health Sciences; 12 Built Env = Built Environment and Design; 15 Commerce = Commerce, Management, Tourism and Services; 16 Human Society = Studies in Human Society; 17 Psych = Psychology and Cognitive Sciences; 18 Law = Law and Legal Studies; 19 Creative Arts = Studies in Creative Arts and Writing; 20 Language = Language, Communication and Culture; 21 History = History and Archaeology; 22 Phil & Rel = Philosophy and Religious Studies.

The next chart is similar to the previous one, except that it plots disciplines along the vertical axis according to the proportion of their outputs that were submitted by UoEs that received a 4 or a 5 rating (not just 5). Again the plot indicates the scale of the national research effort in each discipline by showing the total volume of outputs for each two-digit FoR (along the horizontal axis).

**PROPORTION OF OUTPUTS IN UOES RATED ‘ABOVE WORLD STANDARD’ OR ‘WELL ABOVE WORLD STANDARD’ (4 OR 5) VS. DISCIPLINE VOLUME**

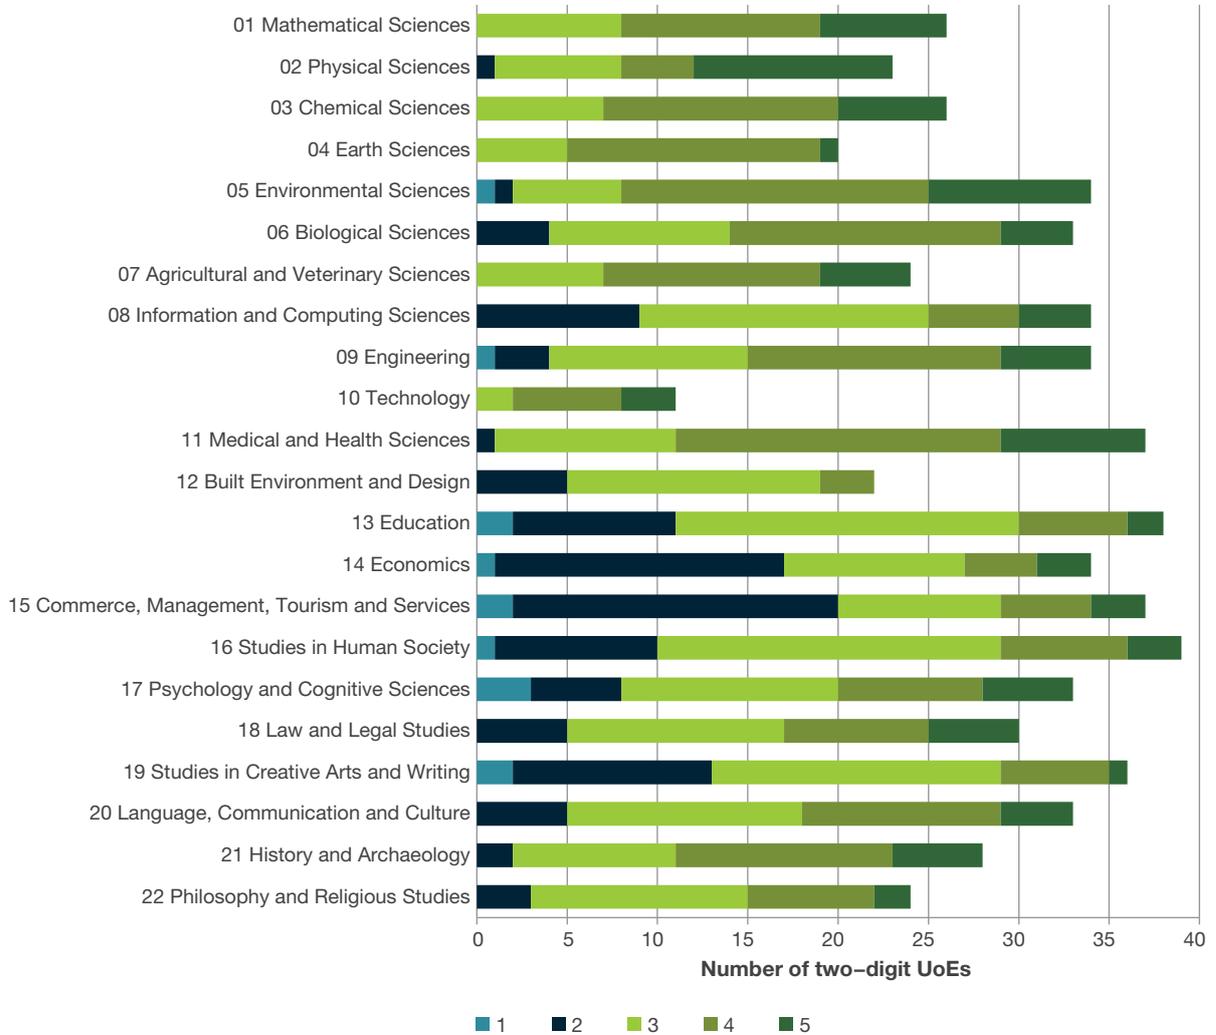

Note: Output volume includes all output types, no weighting is applied.

The following FoR abbreviations have been used: 01 Maths = Mathematical Sciences; 02 Physical Sci = Physical Sciences; 03 Chemical Sci = Chemical Sciences; 04 Earth Sci = Earth Sciences; 05 Enviro = Environmental Sciences; 06 Biology = Biological Sciences; 07 Agri = Agricultural and Veterinary Sciences; 08 Inf & Comp = Information and Computing Sciences; 10 Tech = Technology; 11 Medical = Medical and Health Sciences; 12 Built Env = Built Environment and Design; 15 Commerce = Commerce, Management, Tourism and Services; 16 Human Society = Studies in Human Society; 17 Psych = Psychology and Cognitive Sciences; 18 Law = Law and Legal Studies; 19 Creative Arts = Studies in Creative Arts and Writing; 20 Language = Language, Communication and Culture; 21 History = History and Archaeology; 22 Phil & Rel = Philosophy and Religious Studies.

## Two-digit UoEs – all results

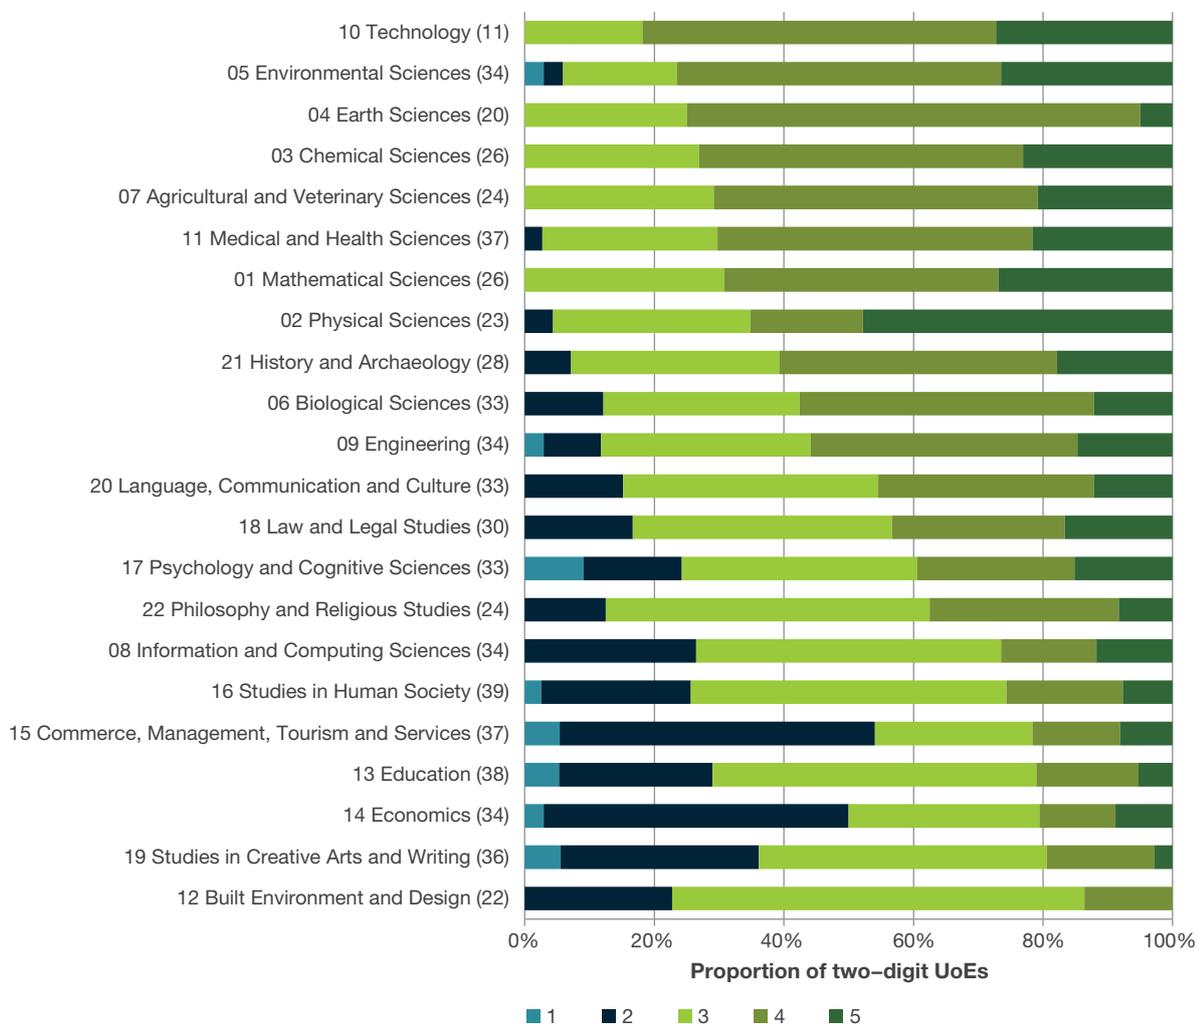

Of the 656 two-digit Units of Evaluation (UoEs) that were rated during ERA 2015, 96 attracted a rating of 5 (well above world standard) and 206 received a rating of 4 (above world standard). This is a total of 302 two-digit UoEs rated above or well above world standard.

### UOE RATINGS (TWO-DIGIT UOES)

Ratings among two-digit UoEs are also presented as a percentage distribution in the following chart, allowing comparisons between disciplines of different sizes. FoRs 10 Technology, 05 Environmental Sciences and 04 Earth Sciences each had 75 per cent or more of their two-digit UoEs rated as 4 or 5.

**DISTRIBUTION OF UOE RATINGS AMONG TWO-DIGIT FOR CODES**

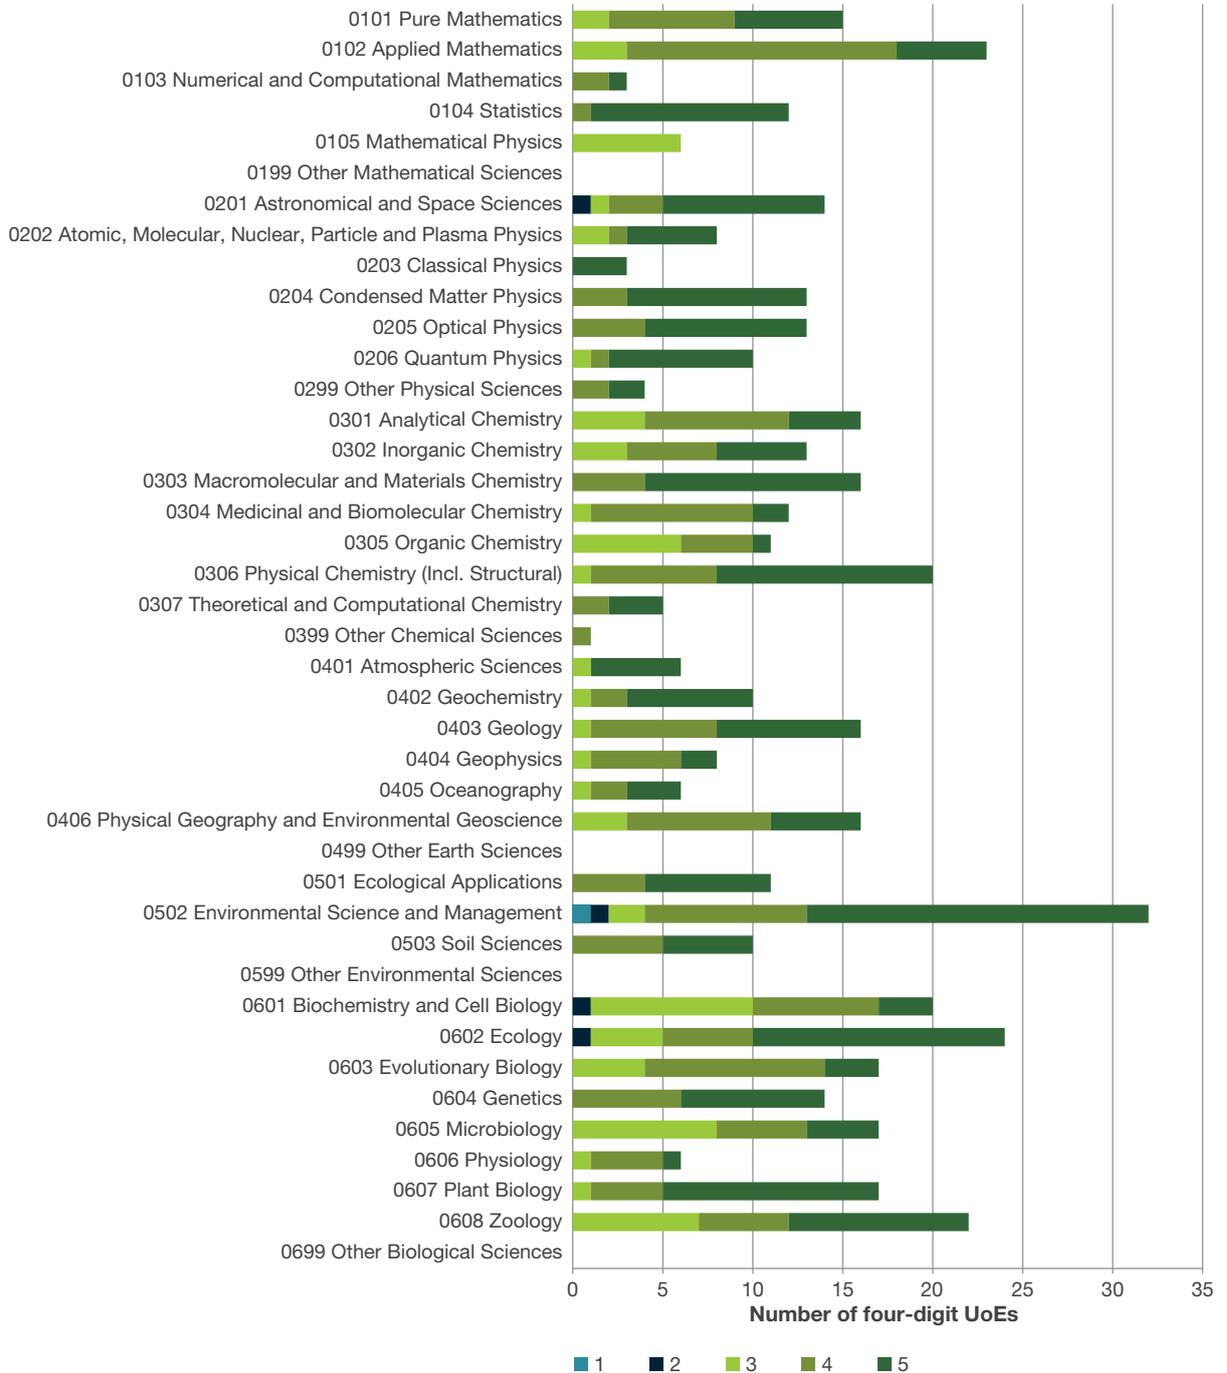

Notes: FoRs are ordered by the proportion of two-digit UoEs that received a rating of 4 or 5. The numbers in the brackets following the FoR name show the total number of two-digit UoEs that were rated in that FoR.

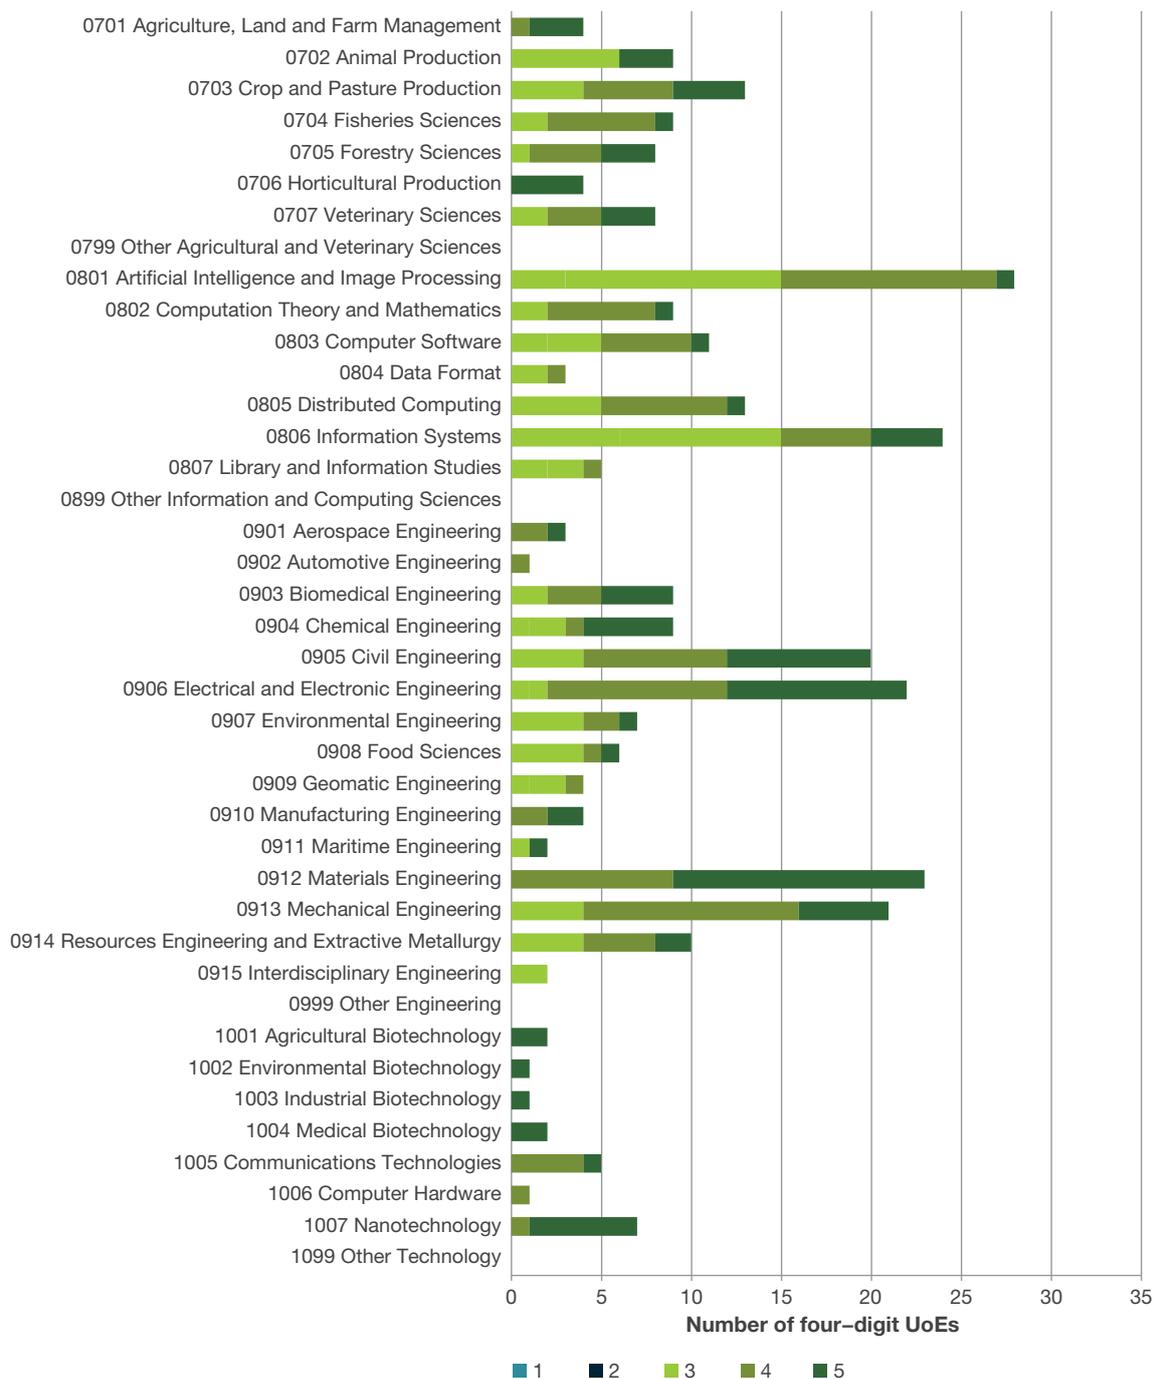

## Four-digit UoEs – all results

The following charts present a full tally of UoE ratings for every four-digit FoR code. For ease of presentation, the 157 four-digit FoR codes are split across four charts.

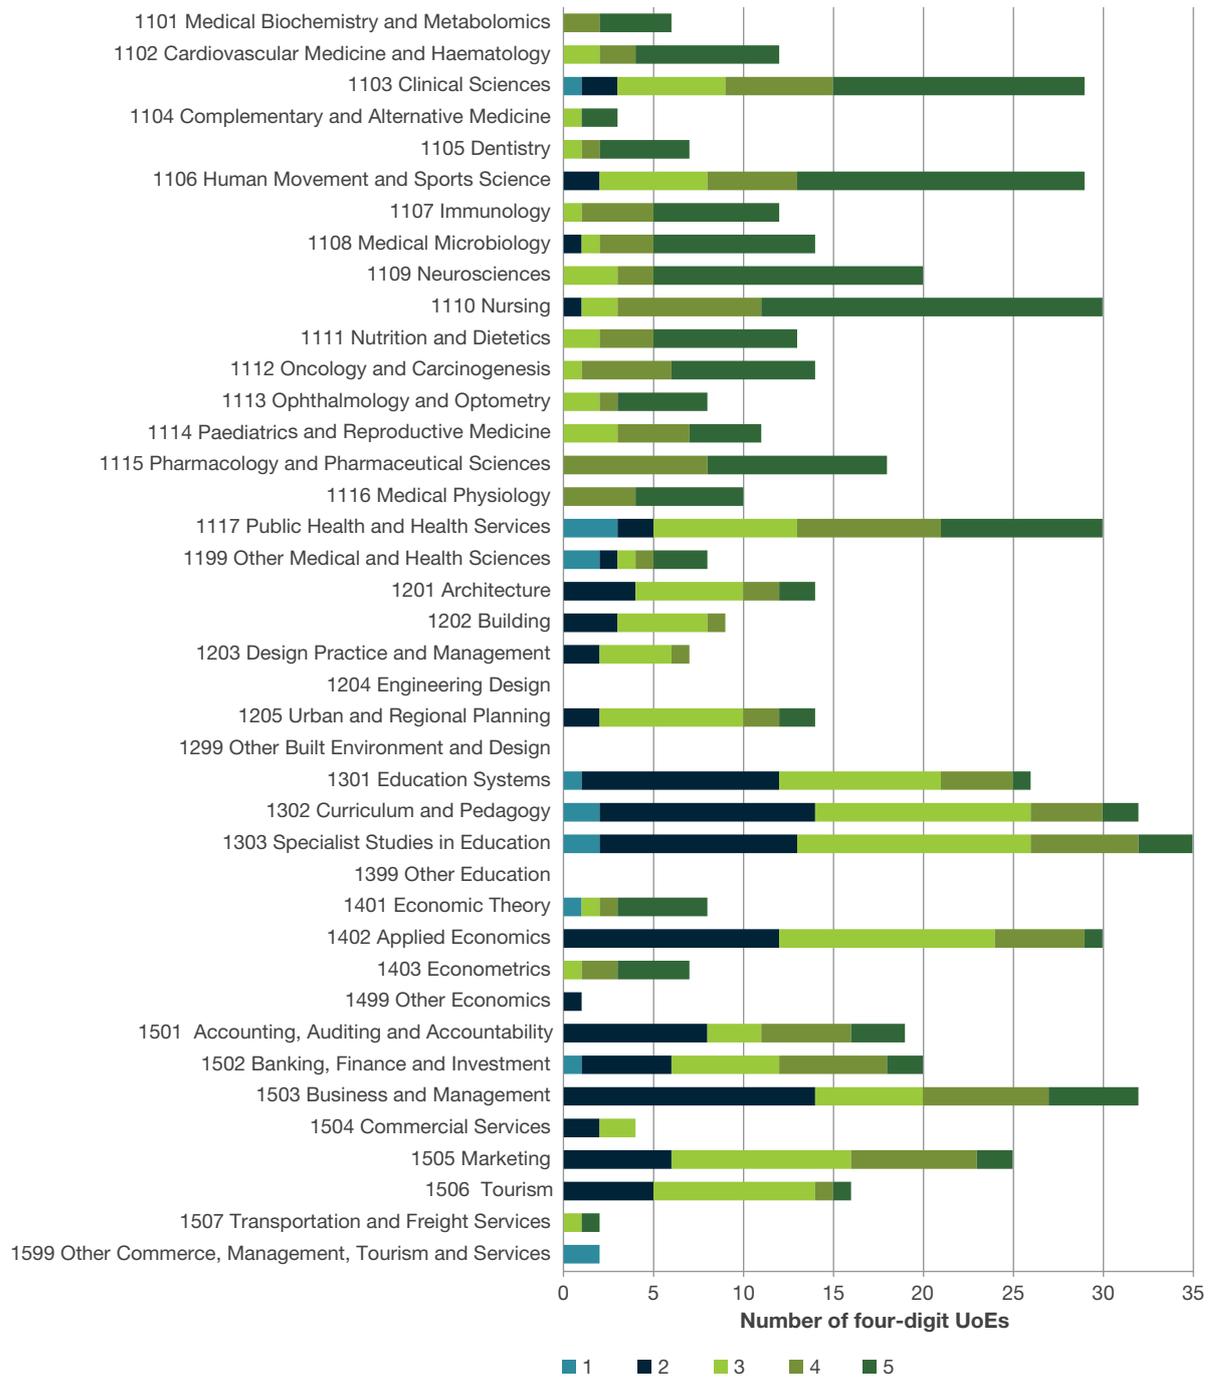

### UOE RATING COUNT BY FOUR-DIGIT FOR (FORS 0101 THROUGH 0699)

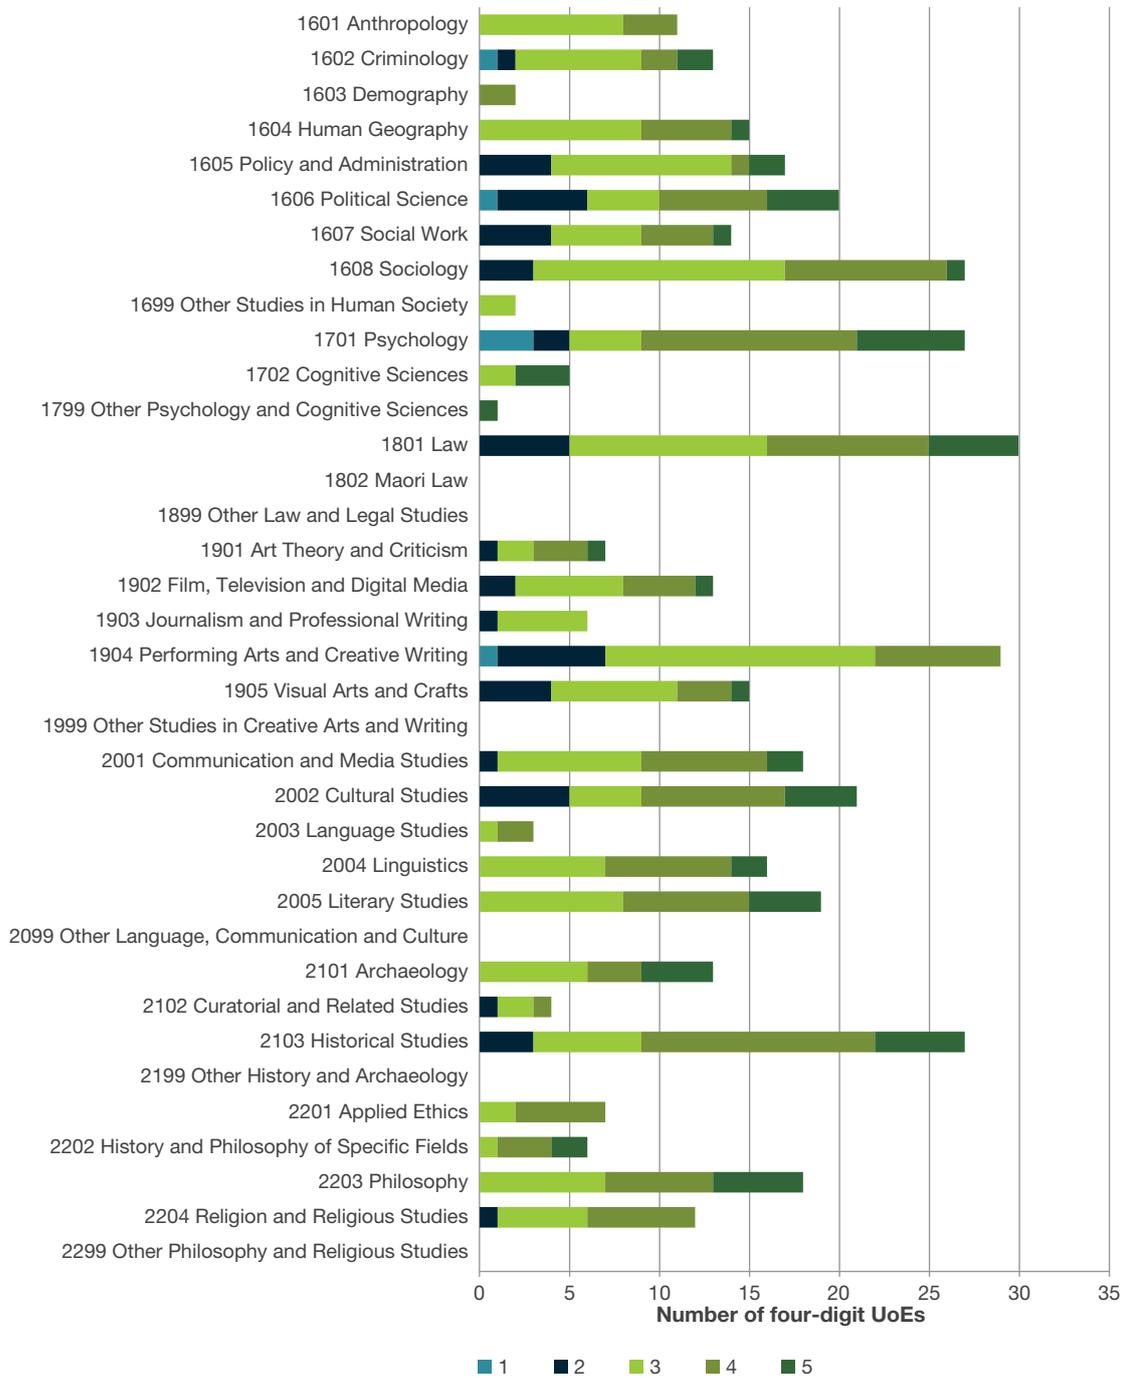

**UOE RATING COUNT BY FOUR-DIGIT FOR (FORS 0701 THROUGH 1099)**

**UOE RATING COUNT BY FOUR-DIGIT FOR (FORS 1101 THROUGH 1599)**

**UOE RATING COUNT BY FOUR-DIGIT FOR (FORS 1601 THROUGH 2299)**

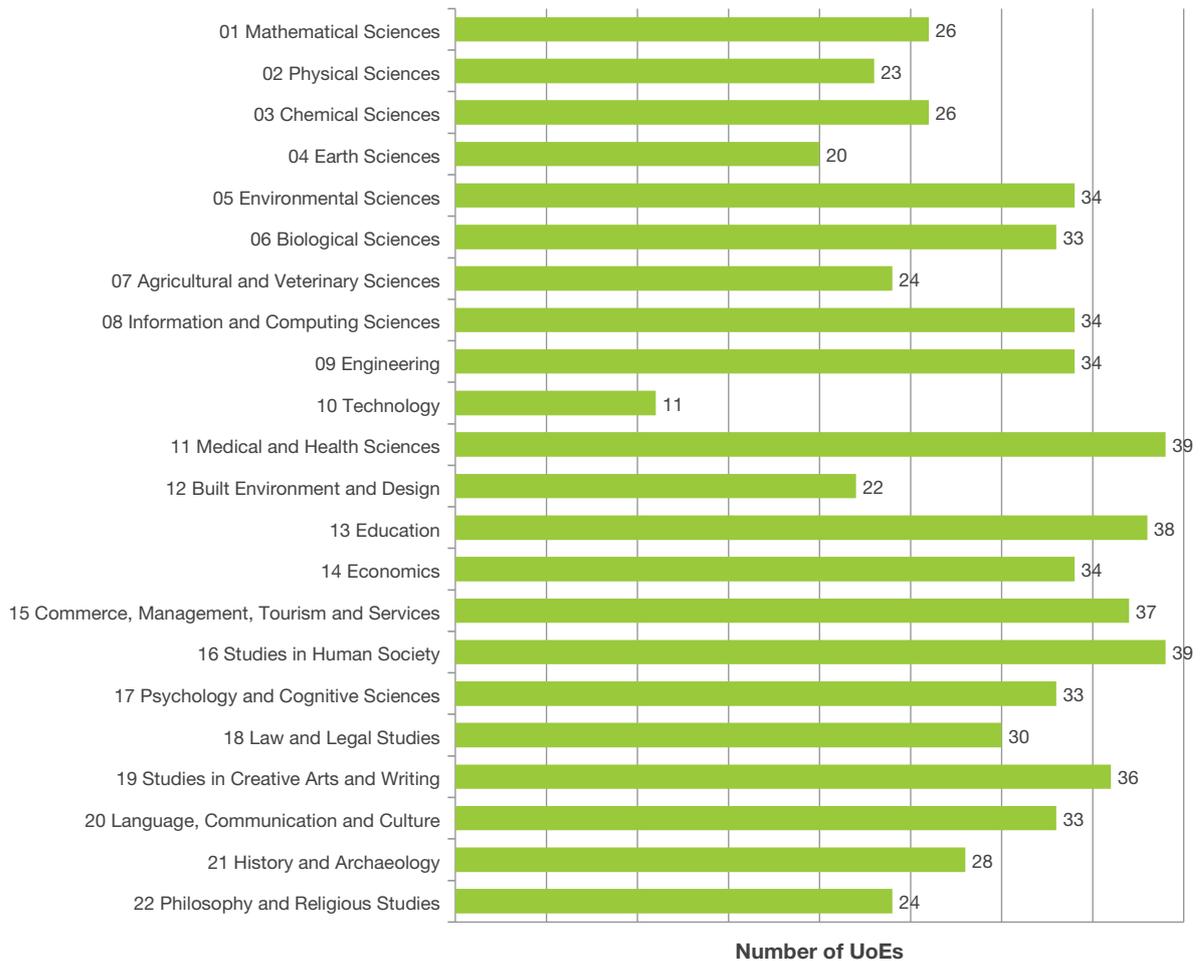

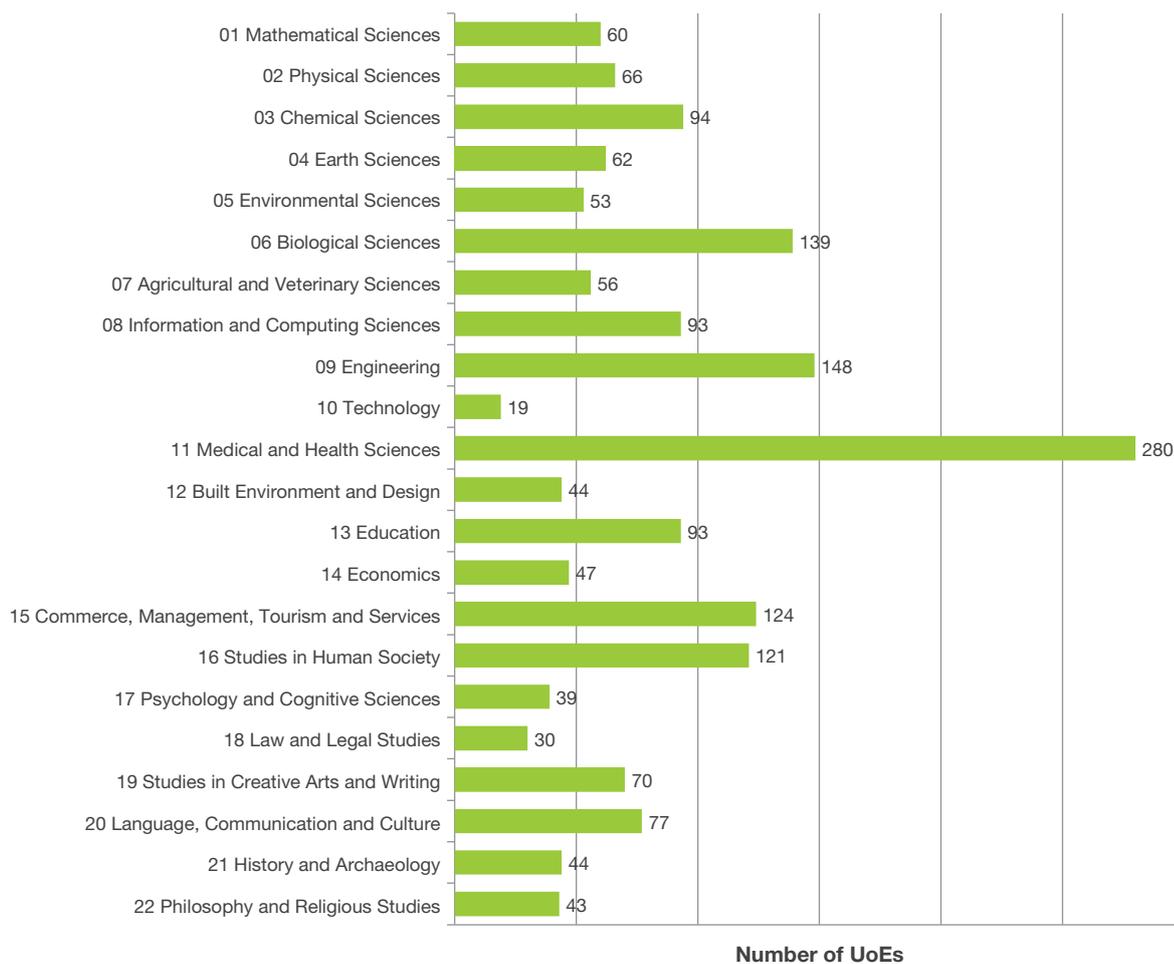

## Assessed Units of Evaluation

In ERA, a Unit of Evaluation (UoE) is the research discipline, as defined by the ANZSRC two- and four-digit FoR codes, for an eligible institution (**Appendix 1**). A UoE is assessed for a specific institution when it has sufficient research volume to be considered research active for the purposes of ERA. ERA evaluation occurs at both the two- and four-digit FoR code levels.

A total of 2,460 (UoEs) were assessed in the ERA 2015 evaluation process. There were 658 two-digit units assessed and 1,802 four-digit units assessed. The first chart below shows the number of two-digit assessed UoEs only. The second chart shows the number of four-digit UoEs assessed aggregated to the two-digit level.

### UOES ASSESSED BY TWO-DIGIT FOR

**UOES ASSESSED BY AGGREGATED FOUR-DIGIT FOR CODES (GROUPED BY TWO-DIGIT FOR CODE)**

## National ERA Volume at a Glance

The table below presents a summary, by discipline, of the number of UoEs assessed and the volume of research outputs submitted to ERA 2015. With the exception of the assessed UoEs column, the two-digit information presented is the aggregate of the corresponding four-digit data.

For each two- and four-digit FoR the following summary information is provided:

› **Assessed UoEs**

The number of UoEs assessed in ERA 2015 which met the low volume threshold.

› **Research Outputs**

The total number of apportioned research outputs (all research output types) submitted to ERA 2015.

› **Weighted Research Outputs**

The total number of research outputs (all research output types) submitted to ERA 2015. For the purposes of calculating the low volume threshold for peer review disciplines, one book was equivalent to five research outputs. Only peer review disciplines (where weighting was applied) are shown in this column.

› **Higher Education Research Data Collection (HERDC) Research Income**

The total amount of research income across HERDC Categories 1–4 research income (in Australian dollars) submitted to ERA 2015.

› **FTEs**

The total number of Full-Time Equivalent staff (FTE) submitted to ERA 2015 (as of the staff census date of 31 March 2014).

› **Esteem**

The total number of esteem measures submitted to ERA 2015.

› **Patents Granted**

The total number of patents submitted to ERA 2015.

› **Research Commercialisation Income**

The total amount of research commercialisation income (in Australian dollars) submitted to ERA 2015.

\* All two-digit FoR codes shown in this table are aggregates of the four-digit FoR codes below, with the exception of the 'Assessed UoEs' column which are the actual values at the two-digit FoR code level.

\*\* One book is equivalent to five research outputs in ERA 2015 for the calculation of low volume threshold for relevant disciplines.

\*\*\* Triadic patents count as three patents in the Total.

## Comparison of ERA 2010, ERA 2012 and ERA 2015

### Percentage changes between 2012 and 2015

### Number of outputs, applied and esteem measures in the three ERA rounds

The following table provides an overview of the types and volume of research outputs, applied measures (excluding income) and esteem measures submitted to ERA 2010, ERA 2012 and ERA 2015.<sup>1</sup>

Traditional research outputs (books, book chapters, journal articles and conference publications) apply to all disciplines. In ERA 2015 there is a new category of non-traditional research outputs, entitled 'research report for an external body' which applies to all disciplines. Other non-traditional outputs (curated or exhibited event, live performance, original creative work, recorded/rendered work) and portfolios only apply to some disciplines.<sup>2</sup>

There has been an increase in the number of traditional research outputs over the three ERA time periods, particularly journal articles. This may have been influenced by a number of factors, such as additional journals included in the *2015 ERA Submission Journal List* resulting in more articles being eligible for ERA; improvements in institutions' data collection practices; and an increase in the number of full-time equivalent staff (FTE) employed in the higher education research system.

<sup>1</sup> **Section 4** provides a more detailed breakdown of research outputs submitted to ERA 2015.

<sup>2</sup> See the ERA 2015 Discipline Matrix (available at [arc.gov.au/era-2015-submission-documents](http://arc.gov.au/era-2015-submission-documents)).

Research Outputs*	2010	2012	2015
<b>Traditional outputs</b>			
Book	4,912	5,270	5,488
Book chapter	34,755	39,597	45,269
Journal article	206,816	286,637	301,499
Conference publication	73,741	72,977	69,610
<b>Non-traditional outputs</b>			
Curated or exhibited event	750	777	753
Live performance	1,807	821	913
Original creative work	9,052	6,026	5,244

Membership of a statutory committee	332	366	262
Recipient of an Australia Council Grant or Fellowship	75	56	84

## Notes:

\* Totals are as reported in the respective ERA national reports, please note the algorithm for removing duplicated outputs has been refined between ERA rounds.

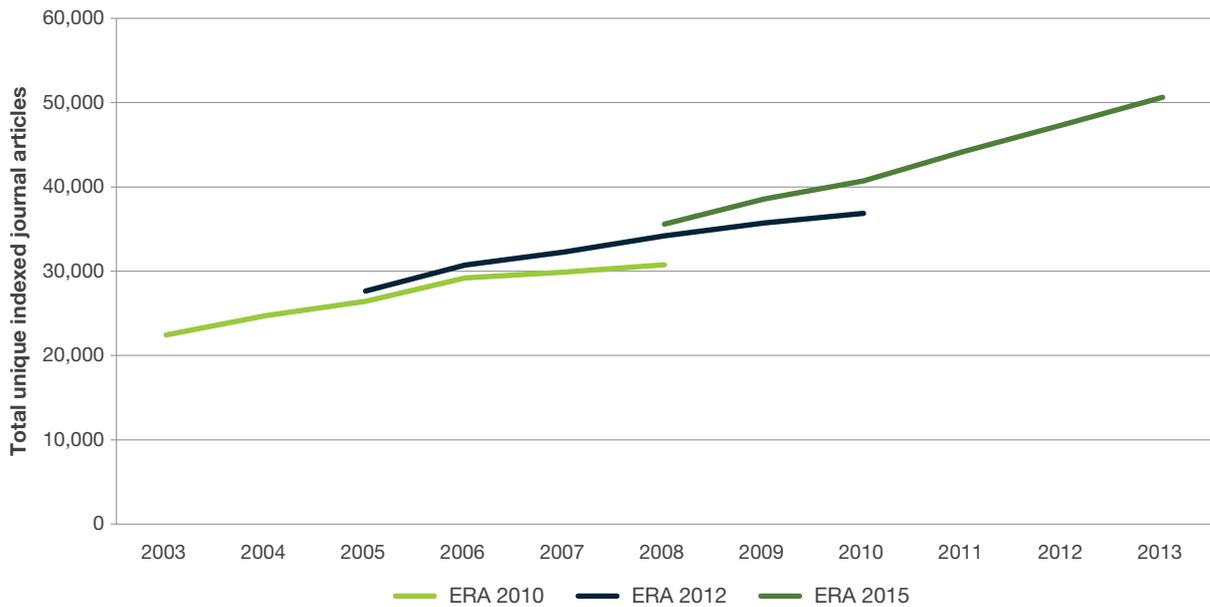

\*\*Output types within portfolios are not included in the total.

## Trends in indexed journal articles in the three ERA rounds

The following chart presents the yearly volume of indexed journal articles in each of the three ERA rounds to date: ERA 2010, ERA 2012 and ERA 2015. In ERA 2010, eligible institutions submitted a total of 22,483 unique indexed journal articles for the year 2003. In ERA 2015, eligible institutions submitted a total of 50,646 unique indexed journal articles for the year 2013 — a more than doubling in volume.

Since the algorithm for removing output duplication is refined between ERA rounds, the chart focusses on indexed journal articles. Indexed journal articles have a unique article identifier which allows the most accurate removal of duplicates and therefore enables comparisons across ERA rounds.

### VOLUME OF UNIQUE INDEXED JOURNAL ARTICLES: THREE ERA ROUNDS

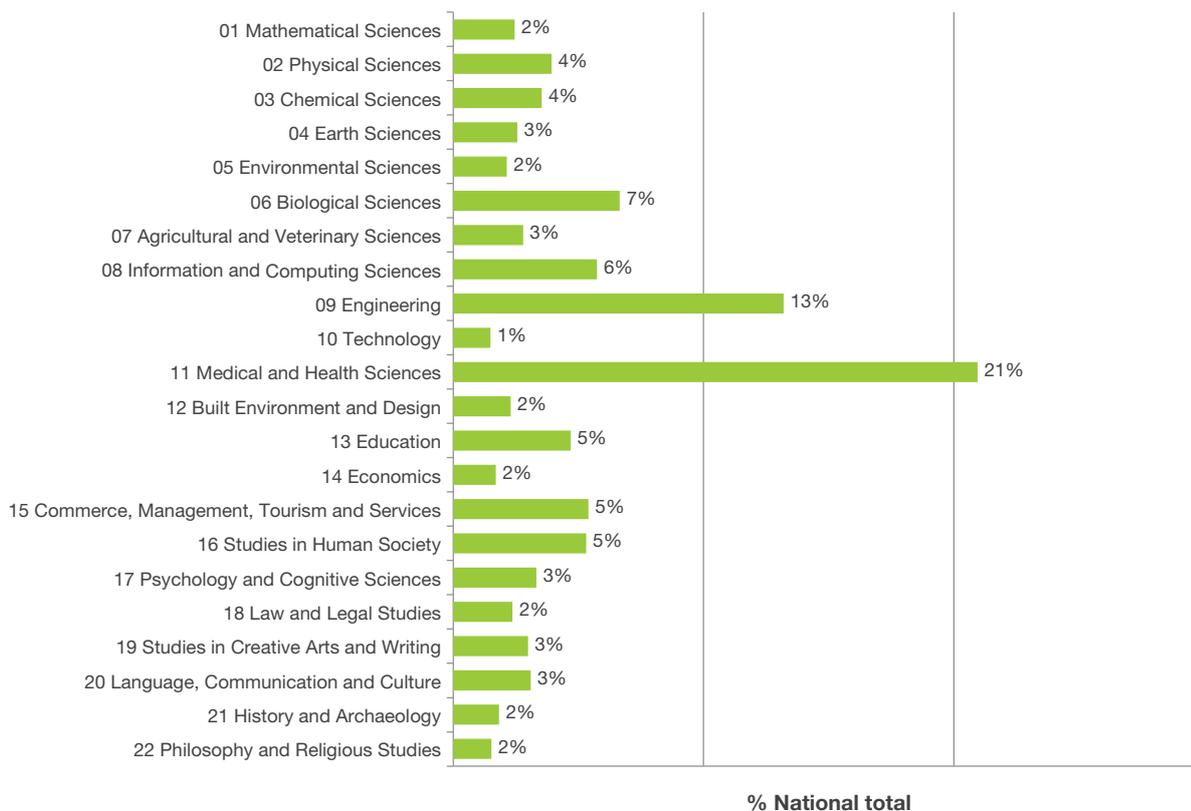

Note: There are some differences in the number of indexed journal articles for the overlap years between ERA rounds, this may be due to staff entering or leaving the system, changes in eligible research outputs, etc.

## Percentage Contribution to the National Landscape

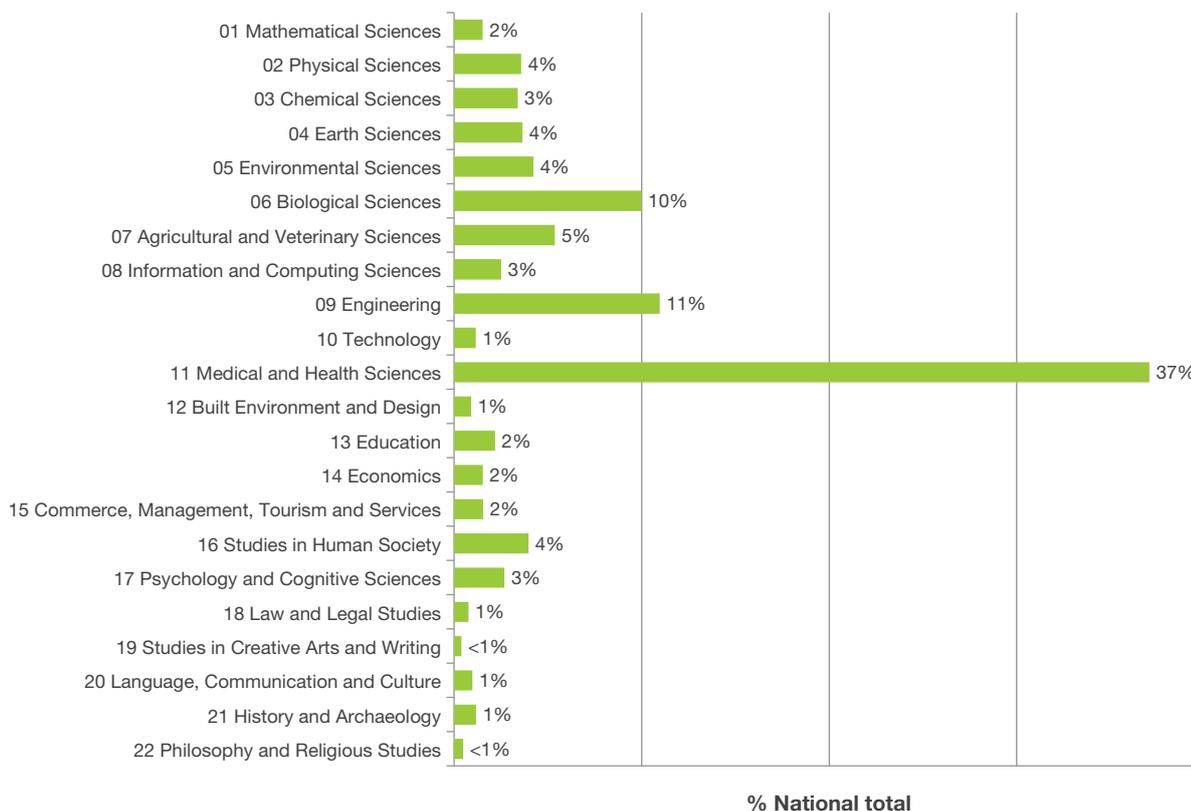

The following charts show the research activity attributed to two-digit FoRs as a proportion of total research activity submitted to all FoR codes in ERA 2015 for research outputs, research income, staff (FTE), esteem, patents granted and research commercialisation income.

Each chart shows how much of the total national share is contributed by the two-digit codes to each of the indicators that form part of the ERA 2015 evaluation. For example, 06 Biological Sciences account for a seven per cent share of the national total of research outputs, a 10 per cent share of the national total of research income, an eight per cent share of the national total of staff (FTE), an 11 per cent share of national total of esteem measures, a 13 per cent share of the national total of patents granted and a three per cent share of the national total of research commercialisation income.

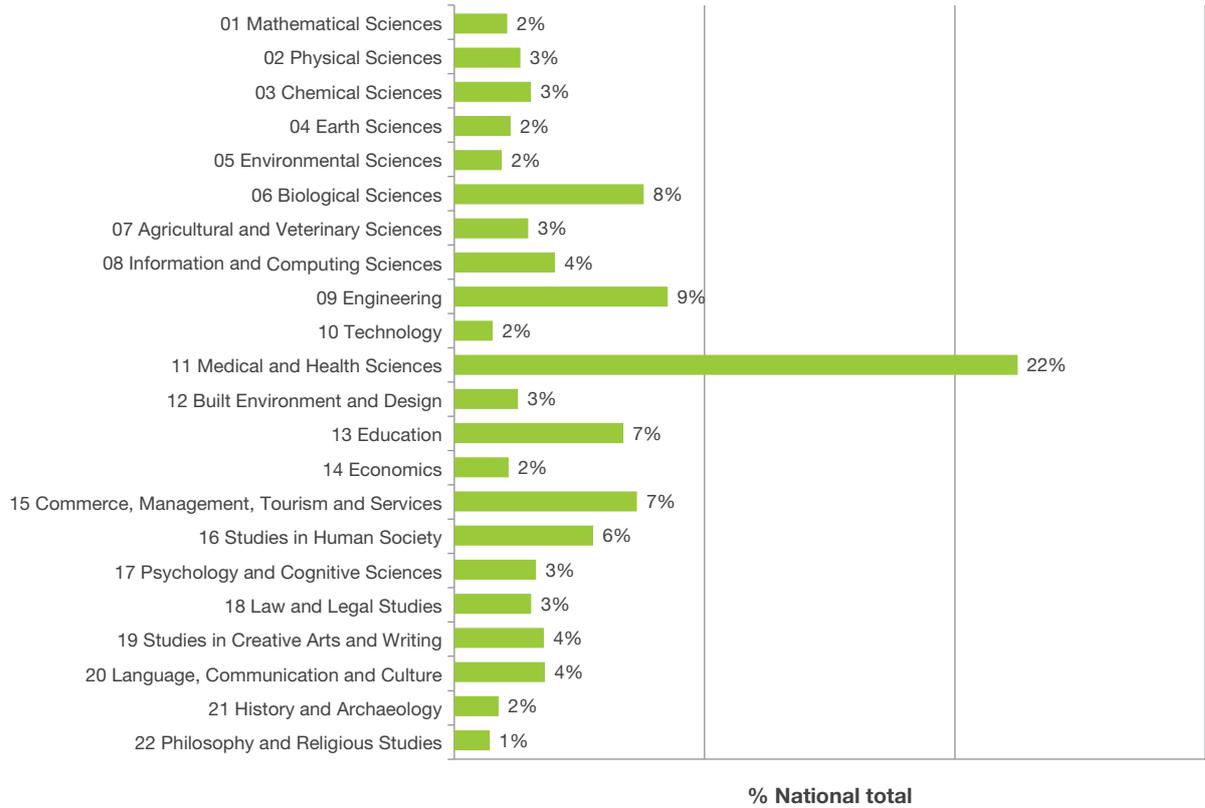

## Research outputs

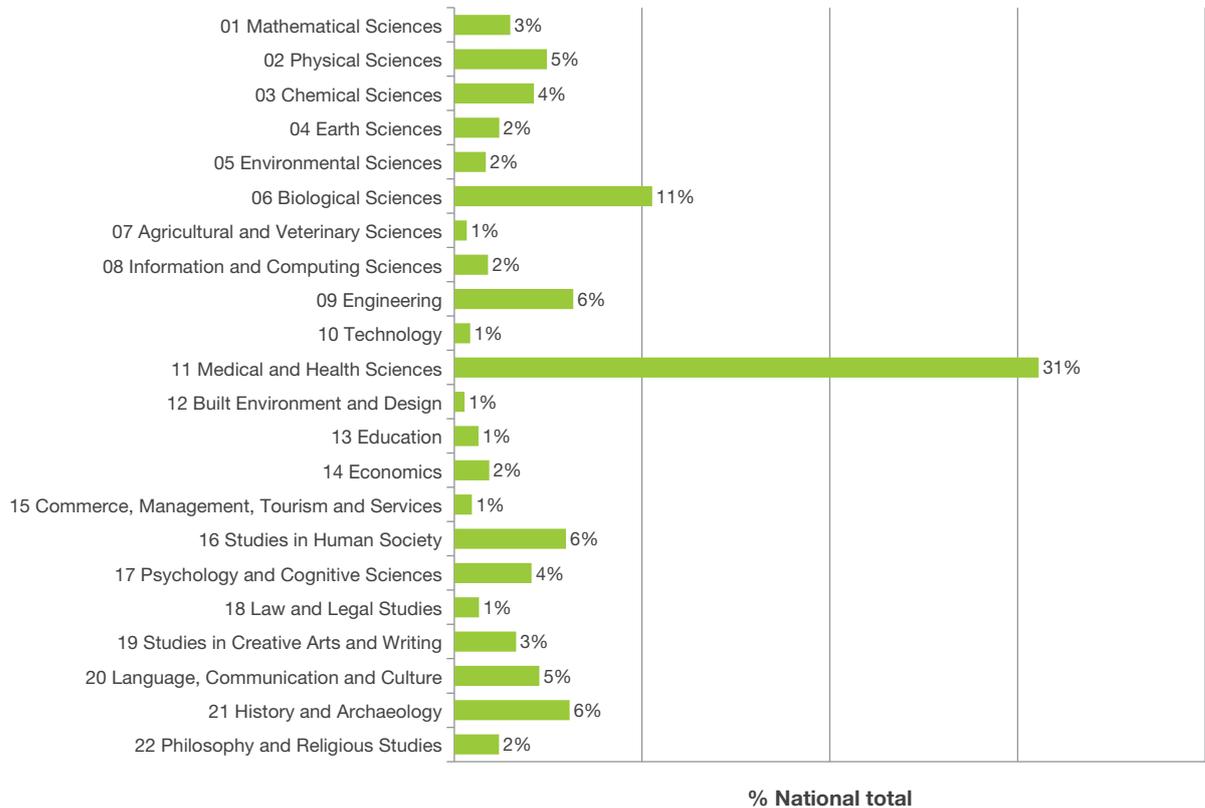

## Research income

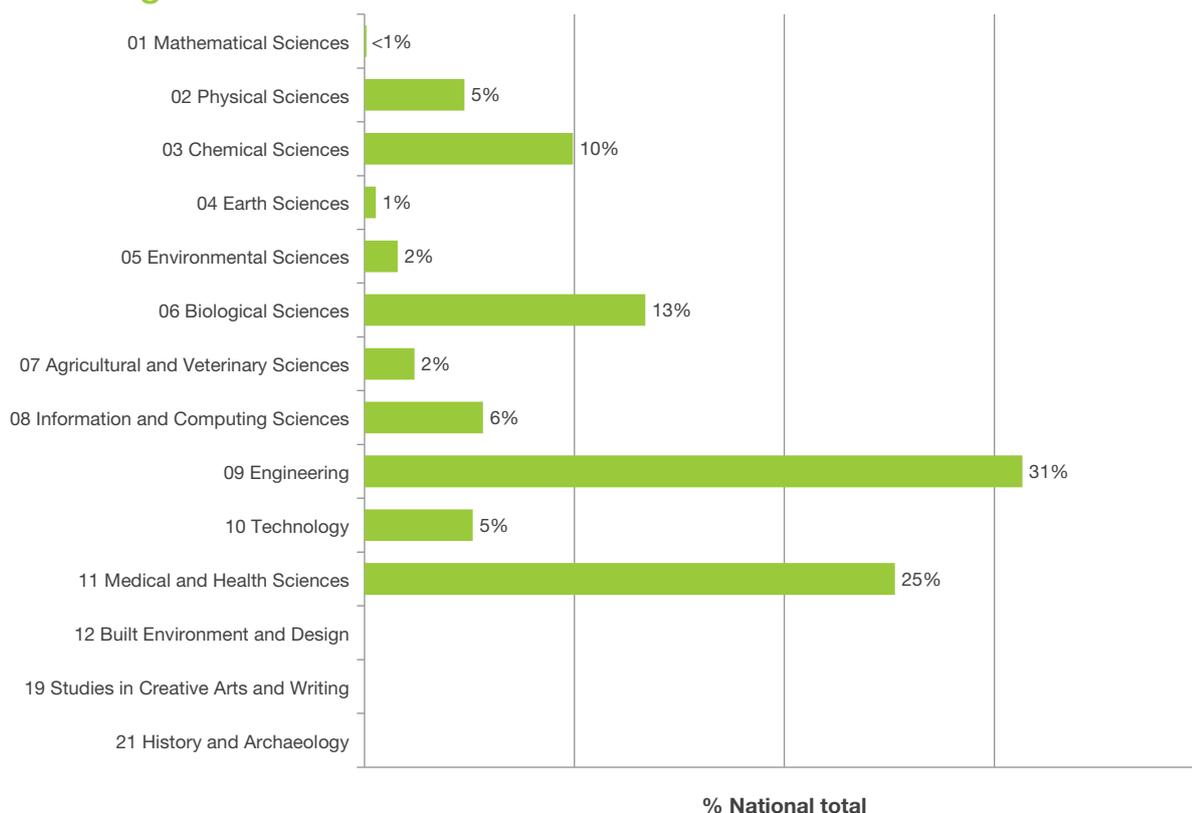

### Staff (FTE)

### Esteem

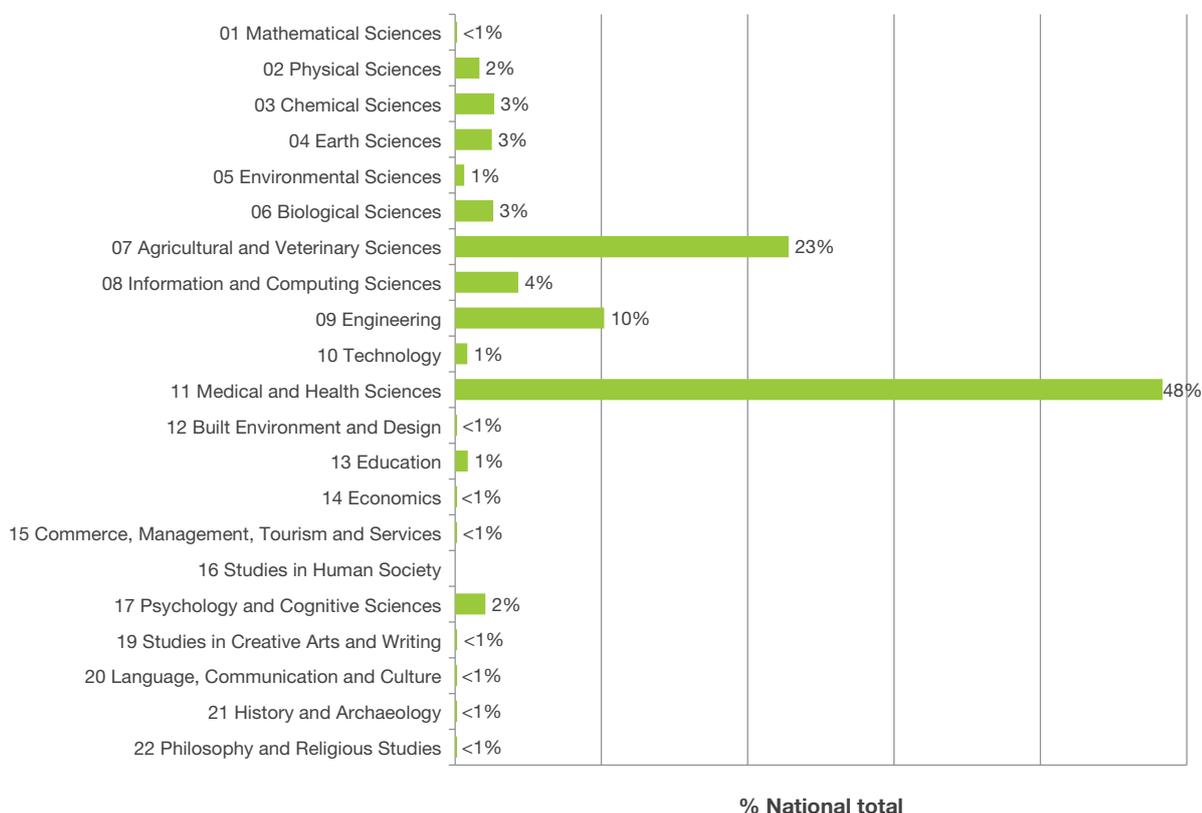

## Patents granted

Note: The FoRs that do not use patents as an Applied Measure do not appear in the table.

## Research commercialisation income

Note: Two- and four-digit FoR codes for Law and Legal Studies (18) do not use research commercialisation income as an applied measure nor do some underlying four-digit codes in Medical and Health Sciences (11).

## Discipline Growth

This sub-section presents analyses of the changes in output volume over time at the two- and four-digit discipline levels for ERA 2015.

### Two-digit discipline growth

The total volume of outputs (i.e. all output types excluding portfolios which do not report by year in the submitted data) for each year of the ERA 2015 reference period increased from 63,400 in 2008 to 81,740 in 2013, which represented a 29 per cent growth on 2008 levels. On a discipline basis, all two-digit disciplines grew from 2008 to 2013, with many experiencing steady, year on year increases.

The following table presents output volume for each two-digit discipline in 2008 and 2013. It also presents the percentage growth from 2008 to 2013 and indicates which year of the reference period had the highest volume. Most disciplines peaked in 2013, at the end of the period. Percentage growth from 2008 to 2013 varied between the disciplines, ranging from two per cent for 15 Commerce, Management, Tourism and Services, to 61 per cent for 12 Built Environment and Design. Other disciplines with high growth in outputs include 05 Environmental Sciences (54 per cent), 11 Medical and Health Sciences (42 per cent) and 09 Engineering (38 per cent).

The charts show volume data for selected disciplines in more detail. Trends in output volume over the period are presented for those disciplines that experienced above-average growth (>29 per cent, first two figures).

#### TWO-DIGIT DISCIPLINE GROWTH BETWEEN 2008 AND 2013

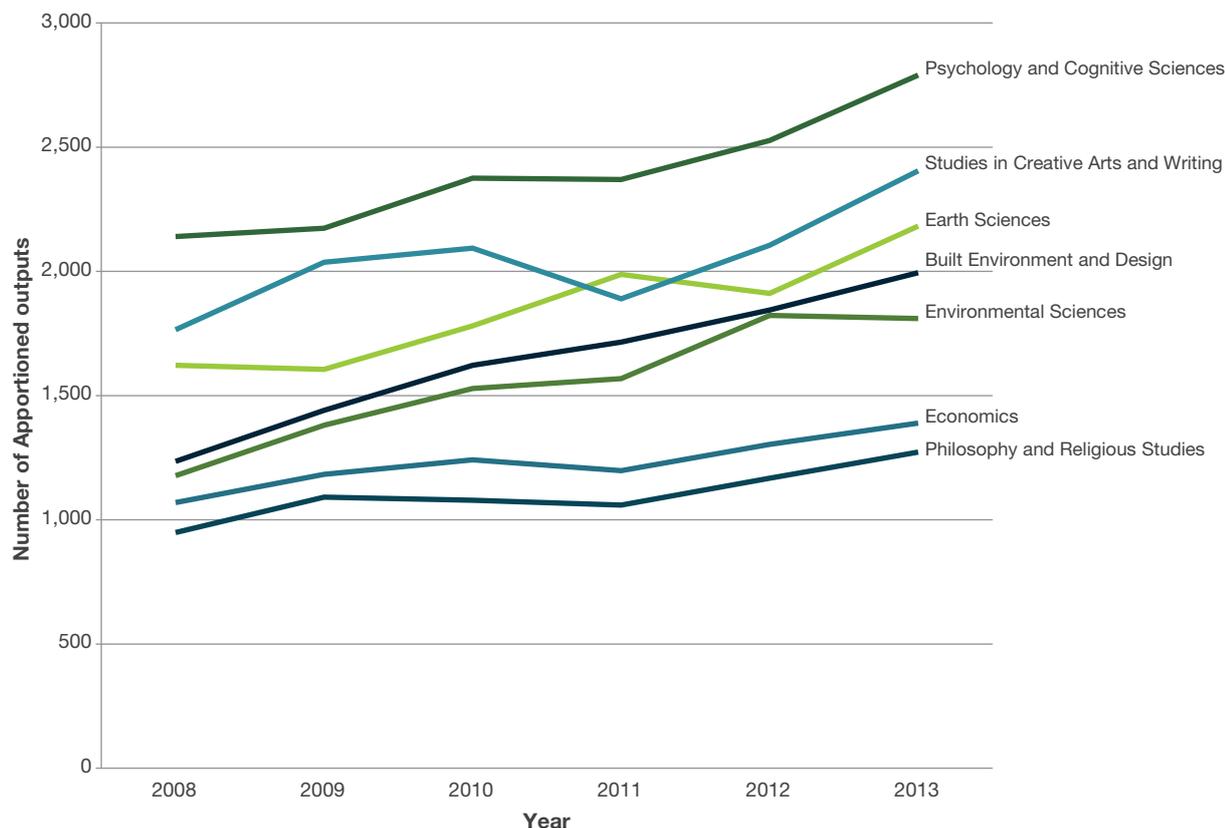

FoR Code	FoR Name	Outputs 2008	Outputs 2013	Growth 2008–2013	Peak year
12	Built Environment and Design	1,235.3	1,994.5	61%	2013
05	Environmental Sciences	1,177.8	1,810.1	54%	2012
11	Medical and Health Sciences	12,862.2	18,290.7	42%	2013
09	Engineering	7,938.7	10,969.0	38%	2013

21	History and Archaeology	1,190.3	1,525.2	28%	2013
16	Studies in Human Society	3,489.9	4,398.4	26%	2013
18	Law and Legal Studies	1,497.1	1,870.9	25%	2013
06	Biological Sciences	4,298.0	5,368.1	25%	2013
03	Chemical Sciences	2,235.0	2,748.7	23%	2013
02	Physical Sciences	2,448.4	3,011.1	23%	2012

*Continued*

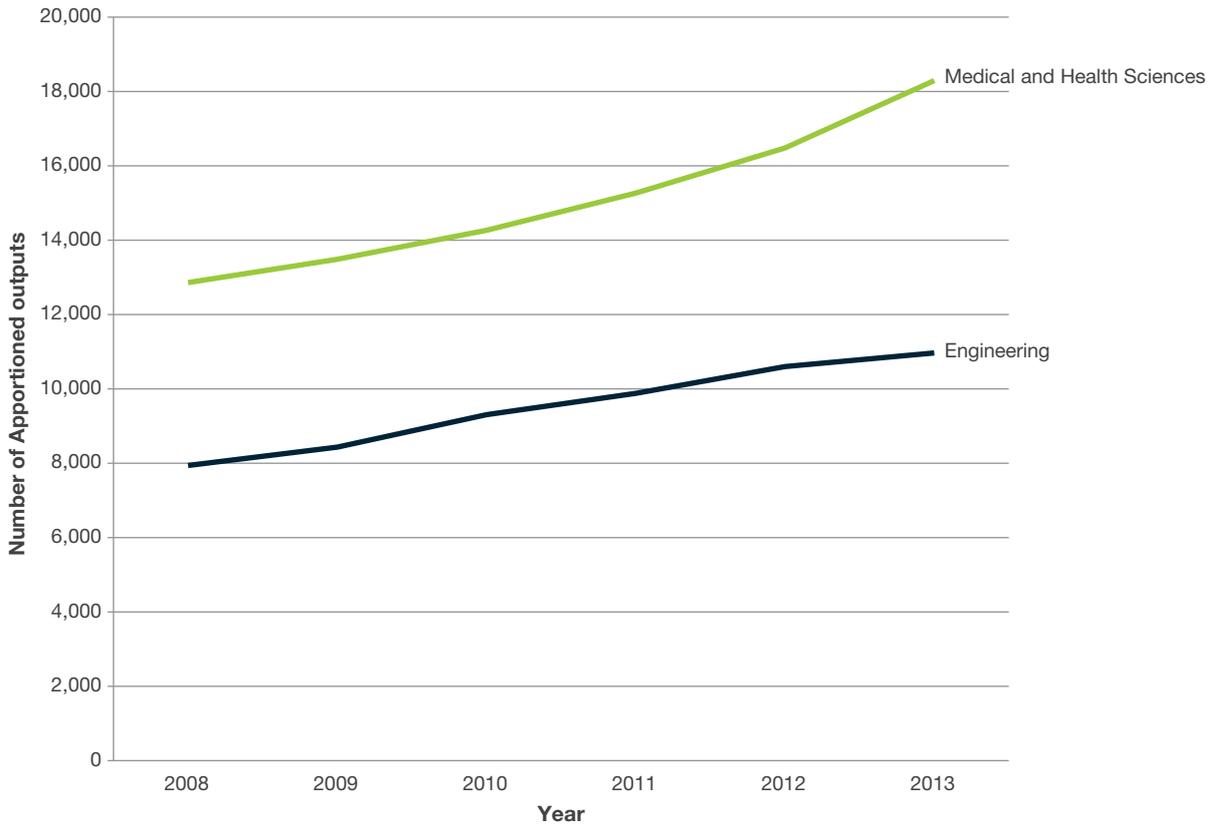

FoR Code	FoR Name	Outputs 2008	Outputs 2013	Growth 2008–2013	Peak year
08	Information and Computing Sciences	3,816.8	4,439.8	16%	2013
20	Language, Communication and Culture	2,106.6	2,398.9	14%	2013
01	Mathematical Sciences	1,697.9	1,836.9	8%	2013
10	Technology	1,097.2	1,180.3	8%	2013
07	Agricultural and Veterinary Sciences	1,913.3	2,054.0	7%	2012
15	Commerce, Management, Tourism and Services	3,853.2	3,926.4	2%	2011

### TRENDS IN TWO-DIGIT OUTPUT VOLUME – HIGH-GROWTH DISCIPLINES

The first chart shows a selection of disciplines that had an above average growth in volume of outputs (i.e. >29 per cent) for the period 2008 to 2013. Medical and Health Sciences (11), and 09 Engineering also experienced above average growth for the period (42 per cent and 38 per cent, respectively), these two-digit FoR codes are shown separately in the second chart due to their much larger volume.

### TRENDS IN TWO-DIGIT OUTPUT VOLUME – HIGH-GROWTH, LARGE VOLUME DISCIPLINES

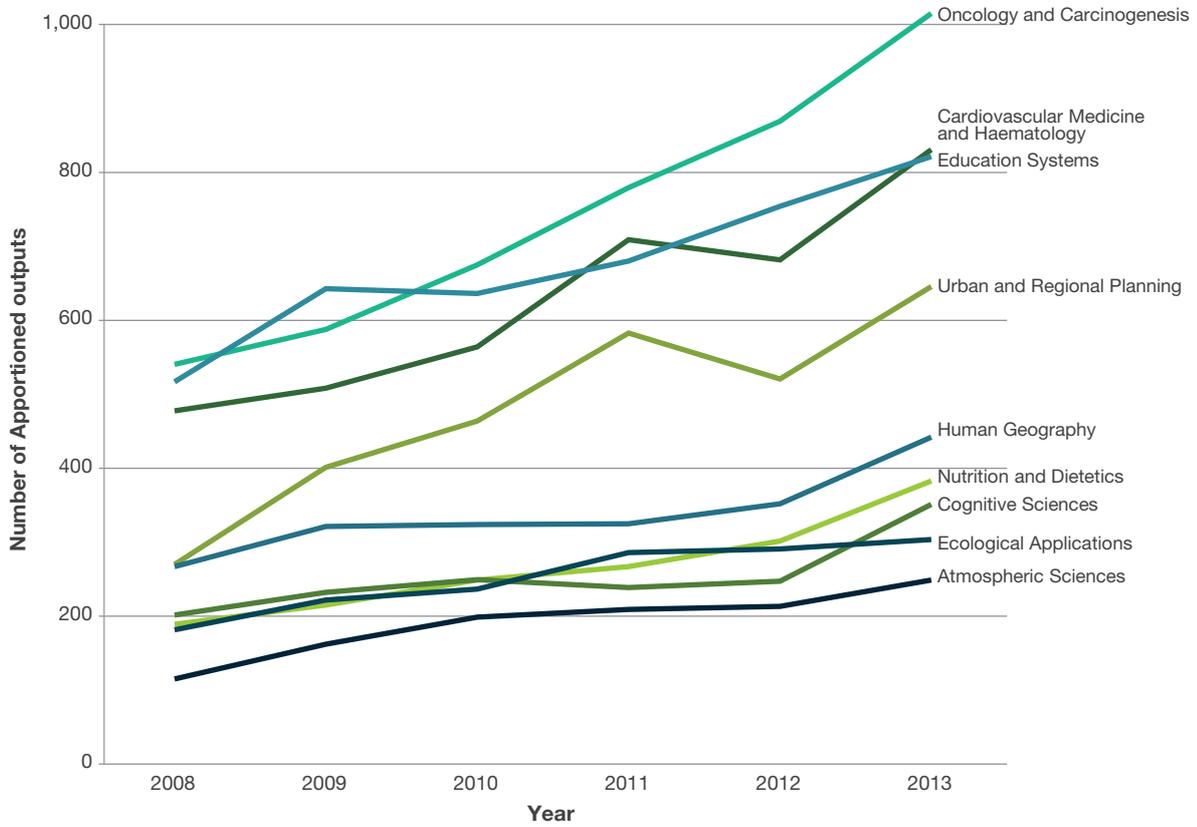

### Four-digit discipline growth

The percentage growth in submitted outputs from 2008 to 2013 was calculated for all four-digit disciplines that had more than 1,000 outputs submitted for the whole reference period (disciplines with less than 1,000 outputs were considered too small to discern a meaningful trend). Most four-digit disciplines grew over the period 2008 to 2013 (108 out of 118 in this analysis), with only 10 showing negative growth. The majority of disciplines had their highest number of outputs in 2013, at the end of the period.

Growth rates ranged from -24 per cent (0103 Numerical and Computational Mathematics) to +139 per cent (1205 Urban and Regional Planning). The average for all disciplines was 29 per cent growth. In absolute terms, the disciplines that showed the largest growth were 1103 Clinical Sciences (1,320.8 more outputs in 2013 than in 2008), and 1117 Public Health and Health Services (1,198.7 more outputs in 2013). The figure below shows output growth for those four-digit disciplines that grew at more than twice the average of 29 per cent (i.e. > 58 per cent growth from 2008 to 2013). The table that follows presents output data for the four-digit disciplines that showed growth over the period 2008 to 2013 that was at or above the average rate of 29 per cent.

**TRENDS IN FOUR-DIGIT OUTPUT GROWTH – HIGH-GROWTH DISCIPLINES**

The chart shows those four-digit disciplines that had growth from 2008 to 2013 that was more than twice the average for all FoRs (> 58 per cent).

## FOUR-DIGIT DISCIPLINE GROWTH BETWEEN 2008 AND 2013

FoR Code	FoR Name	2008	2009	2010	2011	2012	2013	Total 2008 to 2013	Growth 2008 to 2013	Peak year

## Multi-disciplinary Research

Increasingly, government, industry and the research sector are looking towards multi-disciplinary research to solve complex problems. Knowledge flows between usually distinct disciplines attract interest because major advances in innovation often involve collaboration across disciplinary boundaries.

Outputs submitted to ERA are assigned up to three four-digit FoR codes each, reflecting their disciplinary content. Where two or more codes are assigned to a single output, the differently coded content might be related at the two-digit level. An example is an output that has been assigned (apportioned) as part 0603 and part 0604 (i.e. Evolutionary Biology and Genetics—both of which are within 06 Biological Sciences). Multi-disciplinary (MD) research involves two or more academic disciplines that are considered more distinct. In this section a multi-disciplinary output is one where the content has been apportioned by universities to two or more FoR codes from different two-digit FoR groups. An example of a multi-disciplinary output is one where the research content draws on both Applied Mathematics (0102) and Genetics (0604) and the submitting university has apportioned the paper to each of these FoR codes from different two-digit groups (01 Mathematical Sciences and 06 Biological Sciences).

The chart below presents an analysis of ERA 2015 outputs for each two-digit FoR group, showing what proportion of outputs are multi-disciplinary. Of all outputs submitted with 17 Psychology and Cognitive Sciences content, 41 per cent were multi-disciplinary (co-apportioned with content from a discipline group other than 17). Conversely, 59 per cent of '17' outputs were either wholly apportioned to a single FoR within 17, or were co-apportioned with other FoRs from the 17 group. Other discipline groups with a high proportion of multi-disciplinary outputs were 05 Environmental Sciences and 10 Technology, both with around 38 per cent of submitted outputs being multi-disciplinary.

**PROPORTION OF ERA 2015 OUTPUTS THAT ARE MULTI-DISCIPLINARY\* BY TWO-DIGIT FOR CODE**

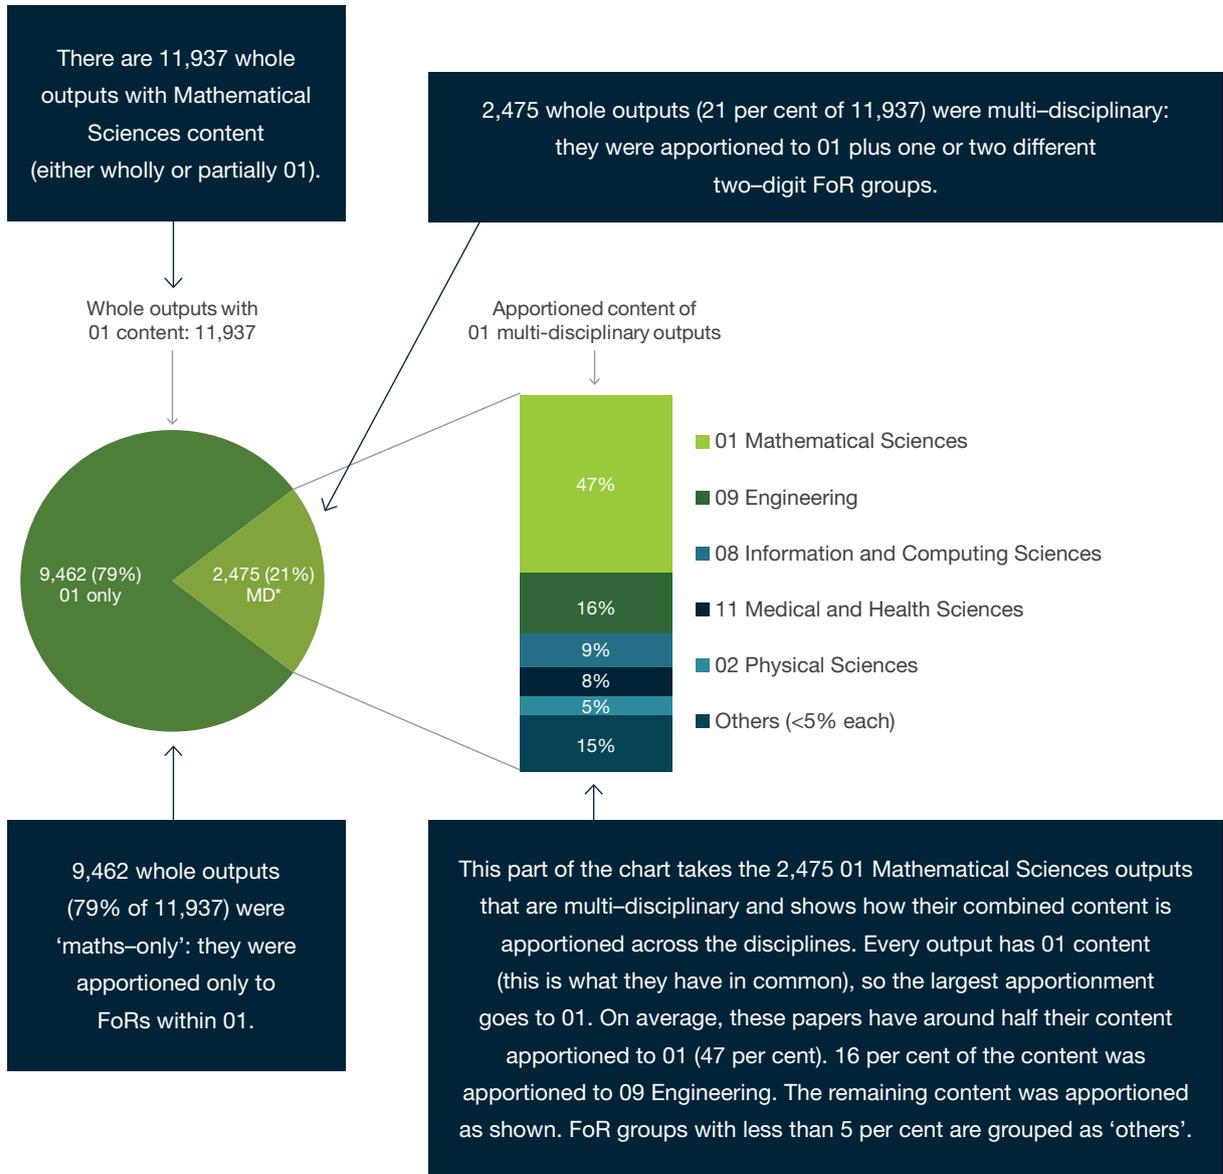

\*A 'multi-disciplinary' output is one where content has been assigned to two or more four-digit discipline codes from separate two-digit FoR groups. For example, an output assigned to both 0102 and 0905 (Applied Mathematics and Civil Engineering), is considered here to be 'multi-disciplinary'; by contrast, an output wholly-assigned to a single four-digit code, or to two or more codes within the same two-digit group (for example, to 0102 Applied Mathematics and 0104 Statistics; both within '01 Mathematical Sciences') is not classified as multi-disciplinary here.

## Multi-disciplinary profiles for two-digit FoR groups

This section presents a profile of multi-disciplinary content for each two-digit FoR group. The profiles aim to show which disciplines are most likely to appear together in multi-disciplinary outputs. The profiles in the pie chart on the left show, for each two-digit discipline, what proportion of outputs are multi-disciplinary (as shown in the previous figure). On the right they show the apportioned content of the multi-disciplinary outputs. The first profile shows that of the 2,475 outputs identified as multi-disciplinary in 01 Mathematical Sciences, 47 per cent of their content was coded within 01 itself; 16 per cent of their content was apportioned within 09 Engineering; nine per cent was apportioned as 08 Information and Computing Sciences; and so forth. Most of the other codes held a less than five per cent share of the multi-disciplinary outputs' apportioned content, and have been grouped as 'other'. The highest apportionment goes to 01 Mathematical Sciences because that is what these outputs all have in common: they are multi-disciplinary outputs with Mathematical Sciences content, plus content apportioned to one or two other two-digit FoRs.

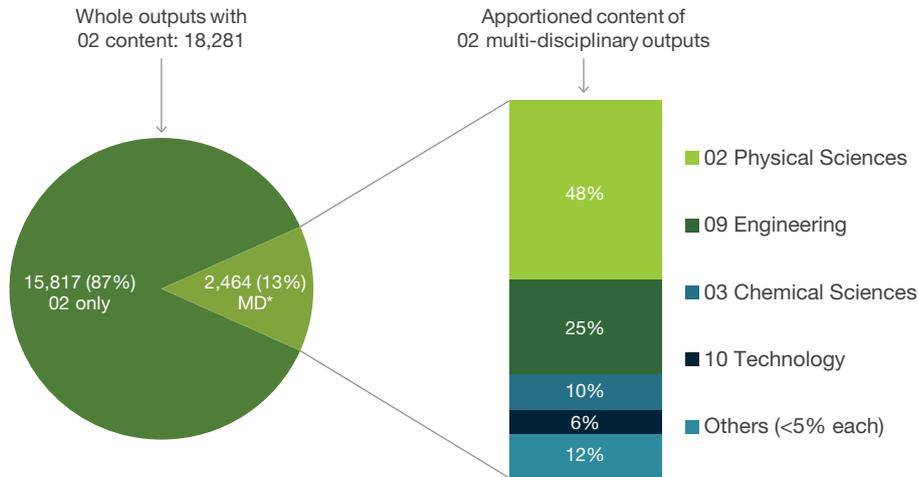

Guide to the multi-disciplinary profiles:

**01 MATHEMATICAL SCIENCES – MULTI-DISCIPLINARY CONTENT PROFILE**

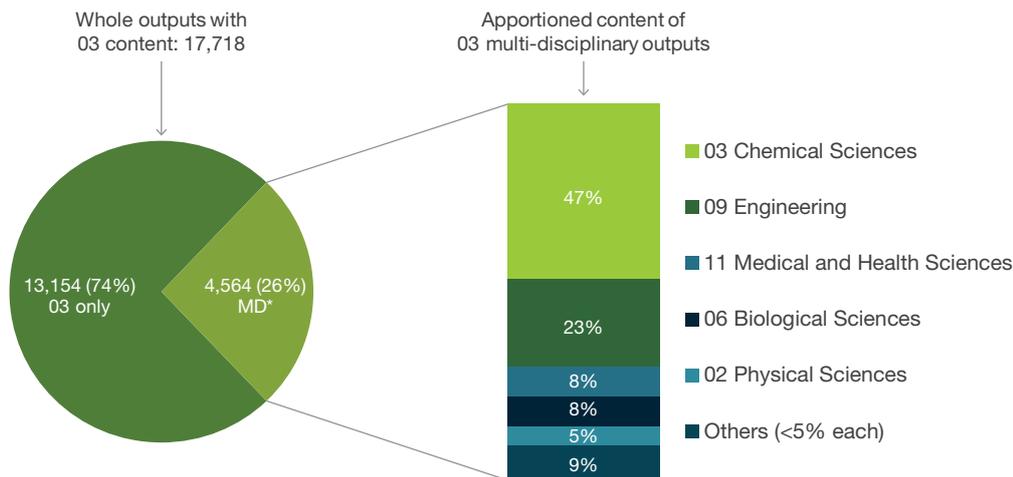

\* MD: Multi-disciplinary, defined as any output that is apportioned to codes from two or more two-digit FoR groups.

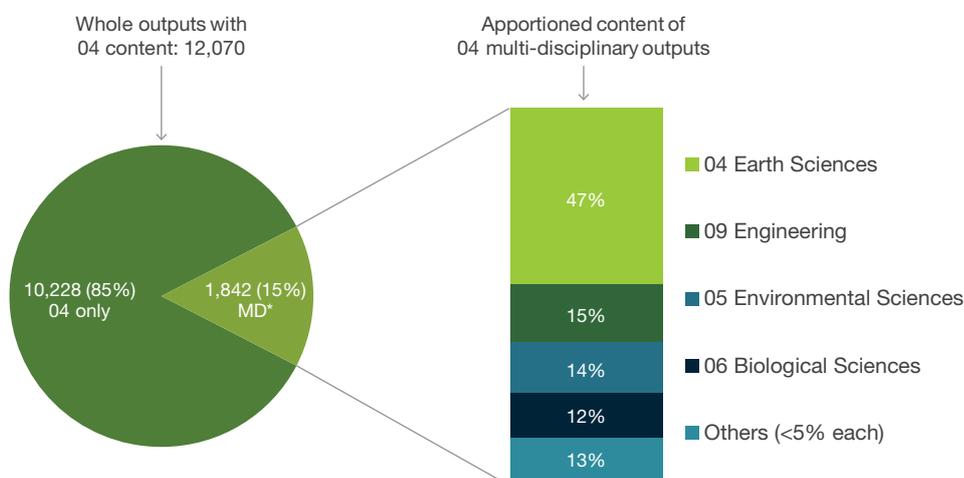

### 02 PHYSICAL SCIENCES – MULTI-DISCIPLINARY CONTENT PROFILE

### 03 CHEMICAL SCIENCES – MULTI-DISCIPLINARY CONTENT PROFILE

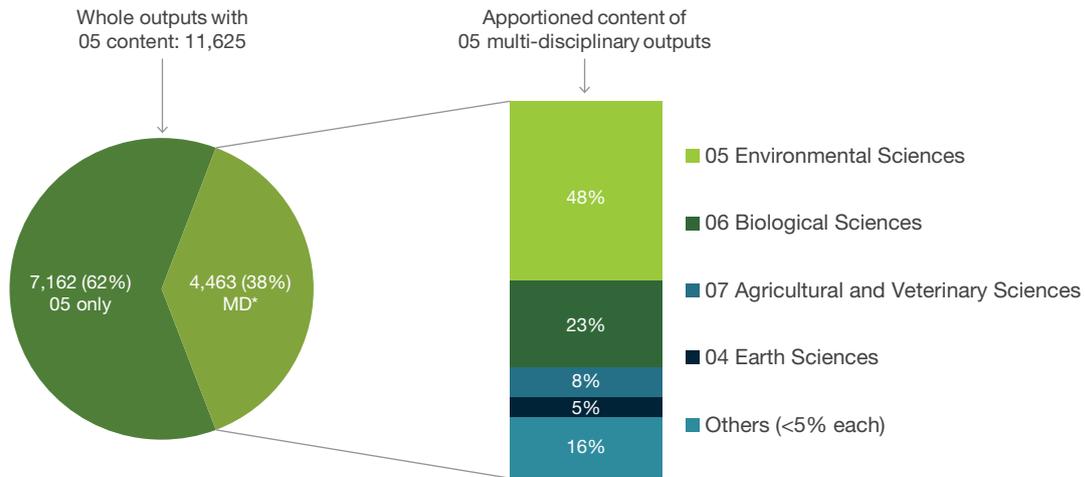

### 04 EARTH SCIENCES – MULTI-DISCIPLINARY CONTENT PROFILE

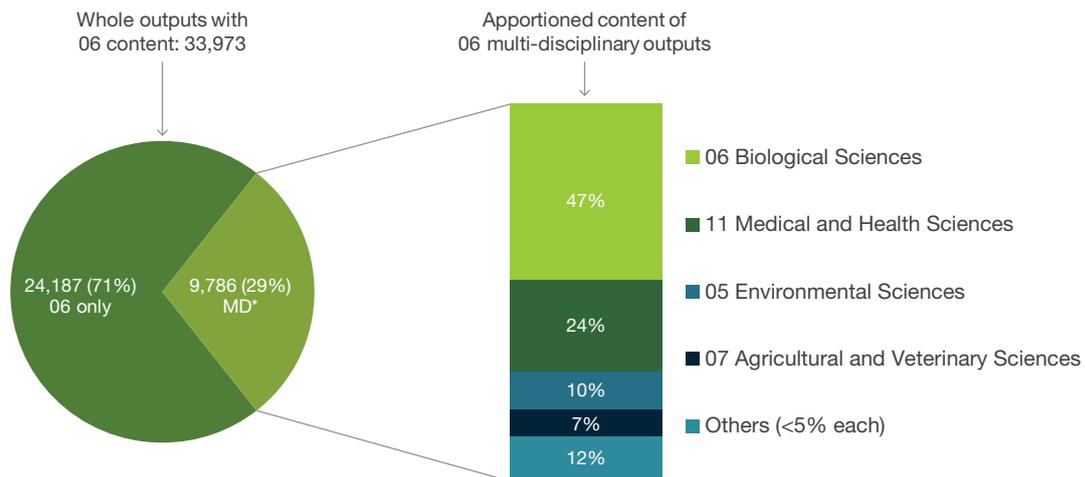

\* MD: Multi-disciplinary, defined as any output that is apportioned to codes from two or more two-digit FoR groups.

### 20 LANGUAGE, COMMUNICATION AND CULTURE – MULTI-DISCIPLINARY CONTENT PROFILE

### 21 HISTORY AND ARCHAEOLOGY – MULTI-DISCIPLINARY CONTENT PROFILE

### 22 PHILOSOPHY AND RELIGIOUS STUDIES – MULTI-DISCIPLINARY CONTENT PROFILE

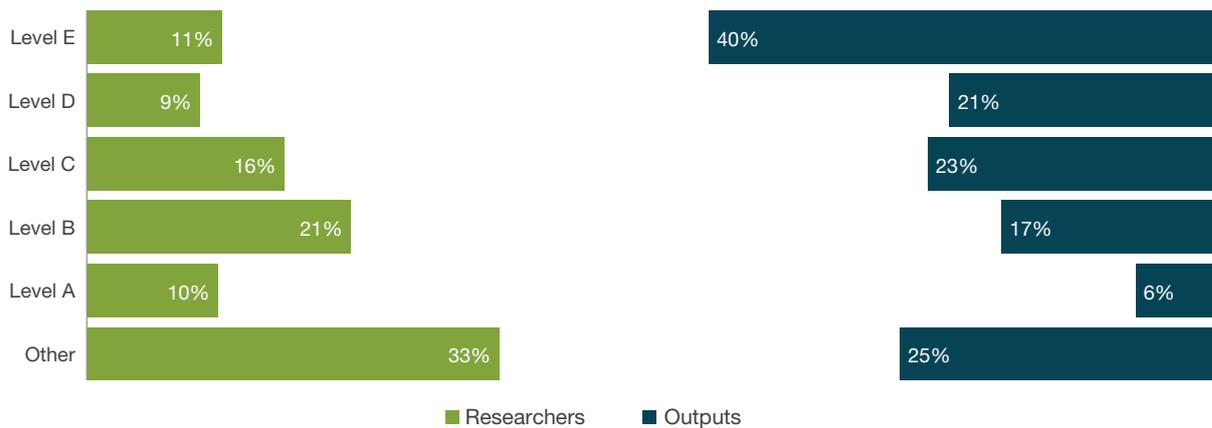

\* MD: Multi-disciplinary, defined as any output that is apportioned to codes from two or more two-digit FoR groups.

## Contribution by Employment Level

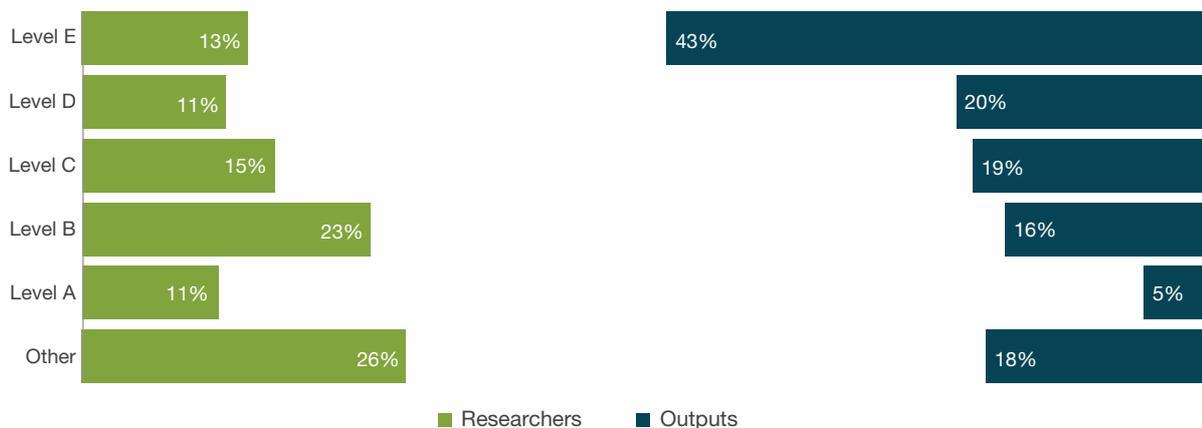

The following charts show how researchers at each employment level contribute as authors to output volume. There is a chart for the ERA 2015 data collection overall, and one for each two-digit FoR. The left hand side of each chart shows the distribution of eligible researchers across the academic levels A to E and the 'Other' employment level. Researcher numbers are measured on a headcount basis (that is, no apportioning for part-time hours). Employment status is not considered here. For example, an eligible researcher identified by their institution as Level E is counted equally whether they are an FTE employee ('Employed'), a 'Casual' employee, or an 'Other Appointment' (for example visiting or exchange). *Note: due to rounding percentages may not sum to 100 per cent.*

The right hand side shows the proportion of outputs where one or more eligible authors are at the corresponding academic level. An output is counted at a particular level if one or more of its ERA-eligible institution authors is at that level (authors who are not eligible ERA researchers are not considered here). For example, the second chart — for FoR 01 Mathematical Sciences — shows that Level C staff made up 15 per cent of all eligible 01 researchers and contributed as authors on 19 per cent of submitted 01 outputs. This means 19 per cent of all 01 outputs had one or more Level C authors. *Note: since outputs may be counted more than once where there are multiple authors with different employment levels on each output, percentages will sum to >100 per cent.*

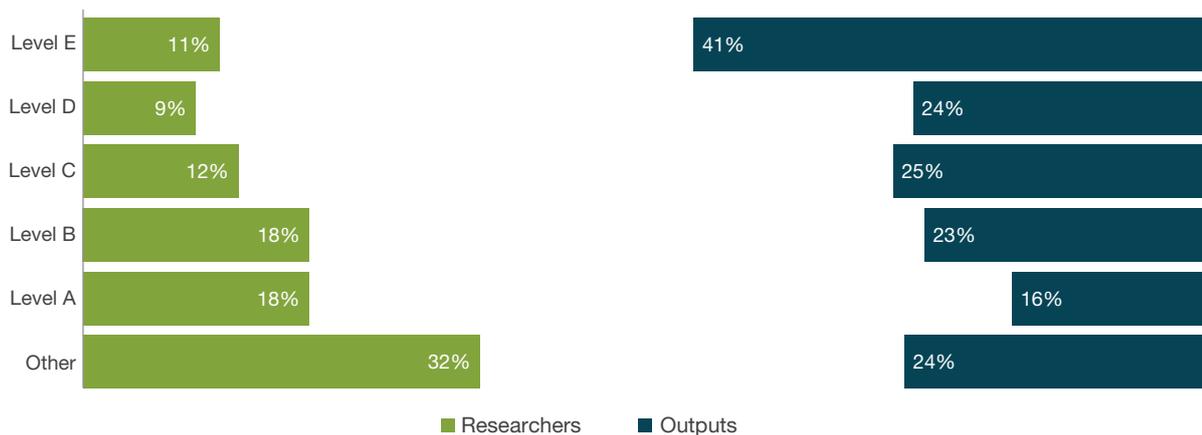

### ALL FORS — DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL

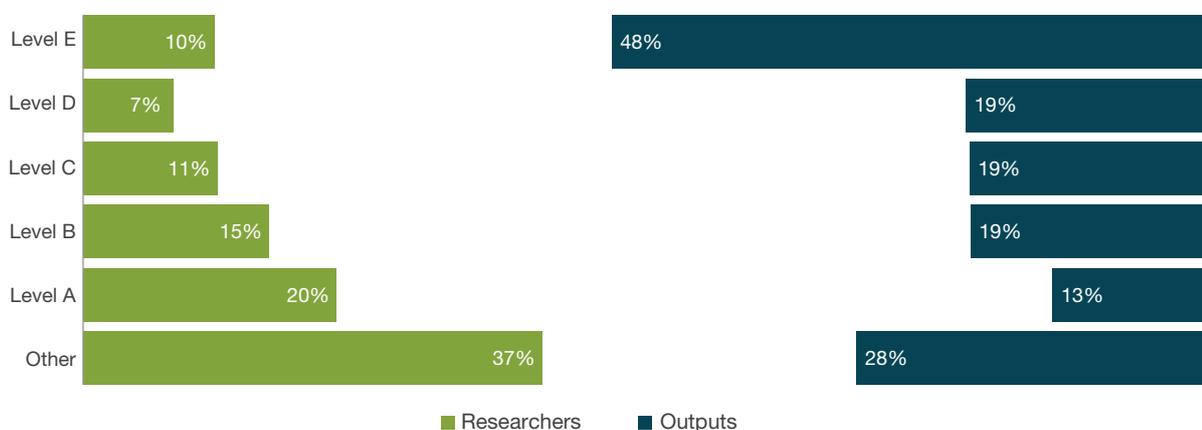

**01 MATHEMATICAL SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

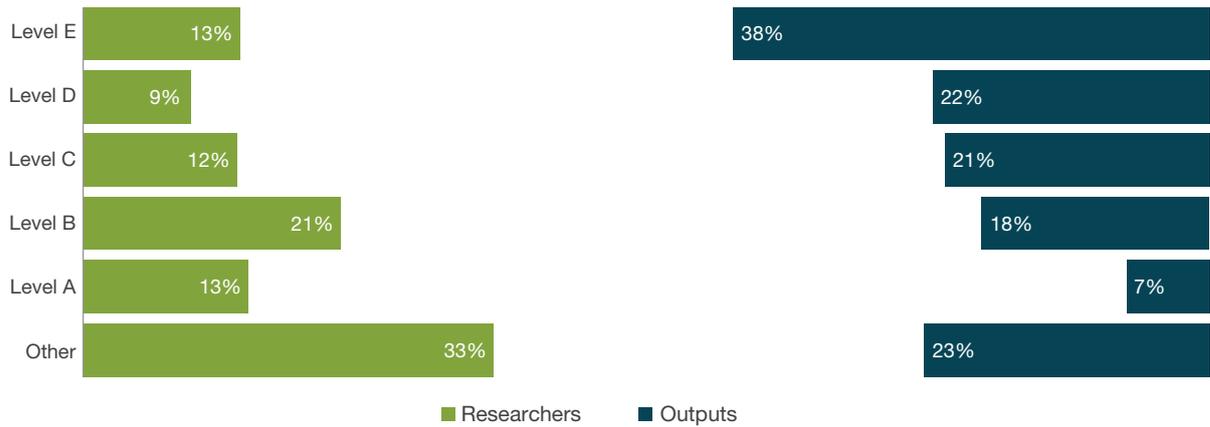

**02 PHYSICAL SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

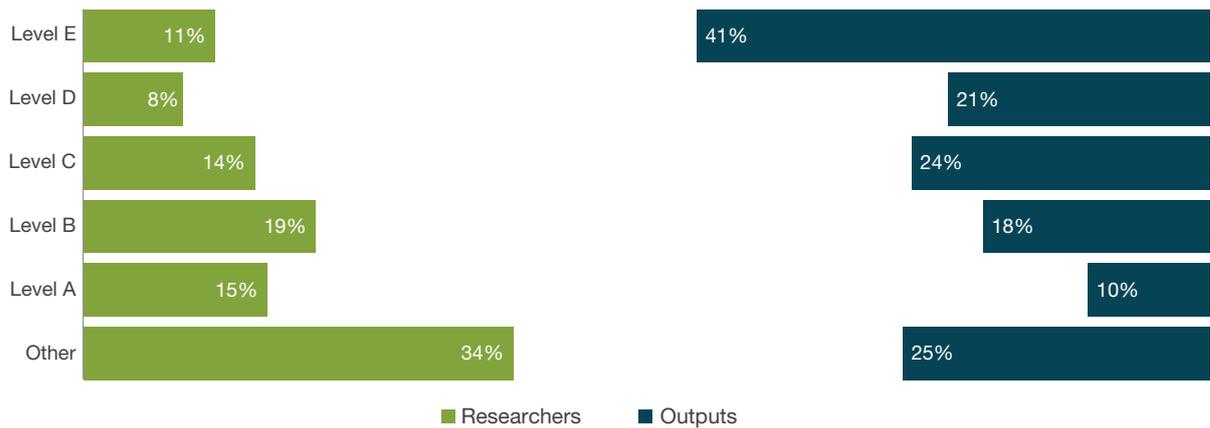

**03 CHEMICAL SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

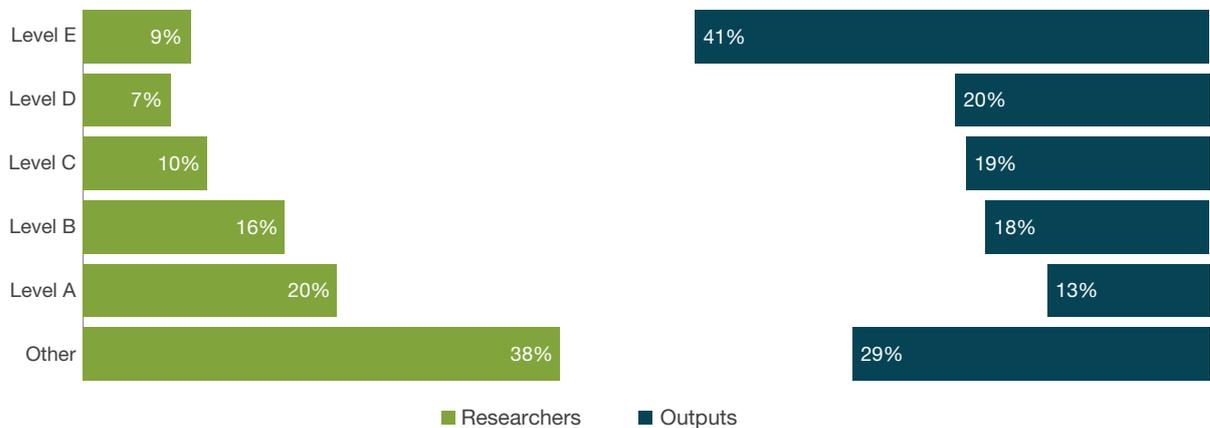

**04 EARTH SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

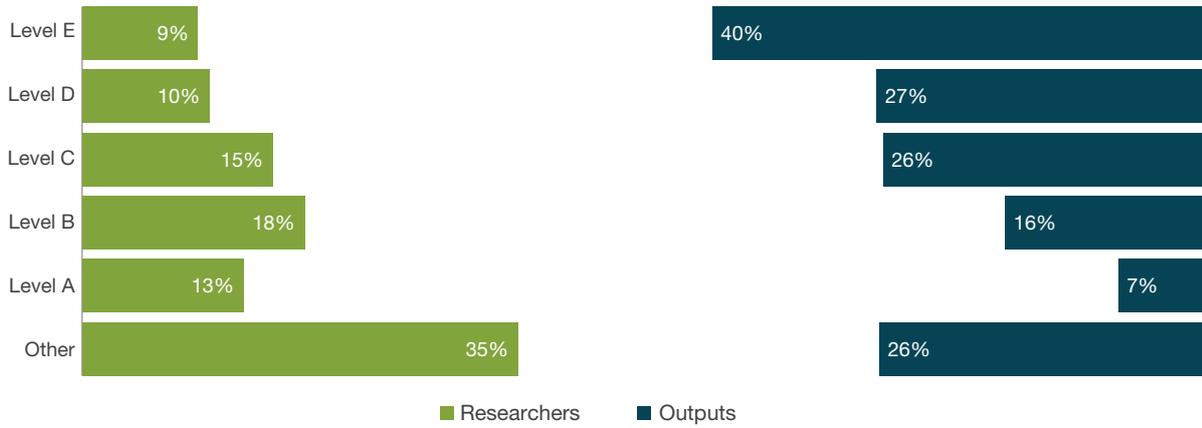

**05 ENVIRONMENTAL SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

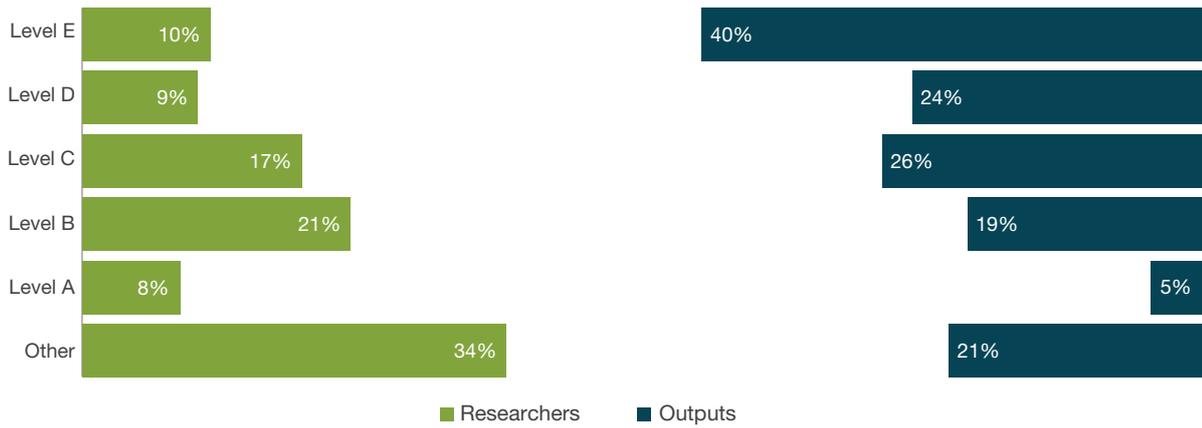

**06 BIOLOGICAL SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

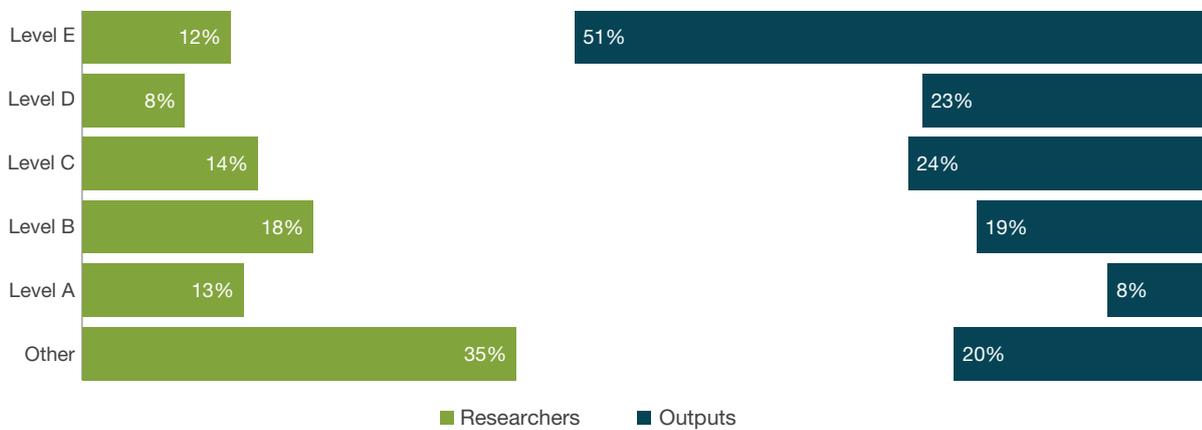

**07 AGRICULTURAL AND VETERINARY SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

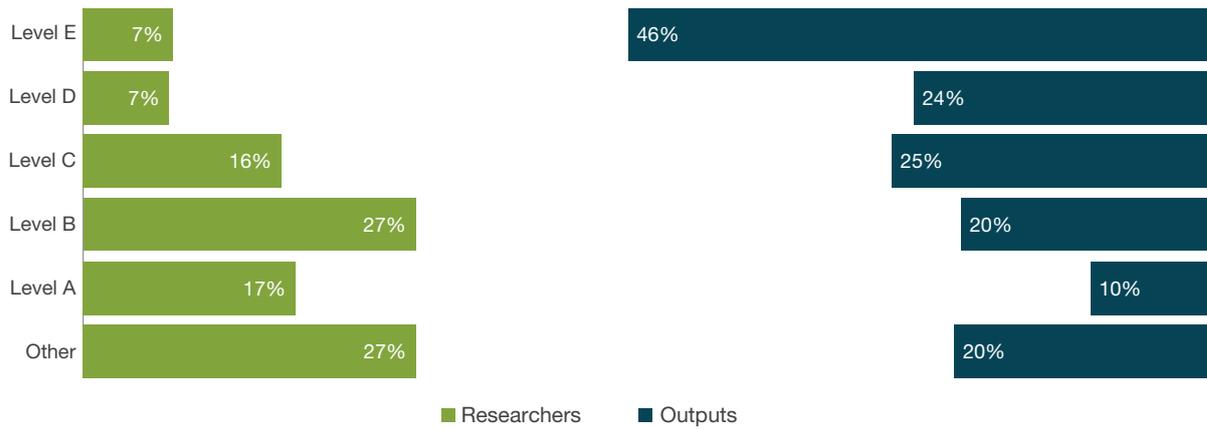

**08 INFORMATION AND COMPUTING SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

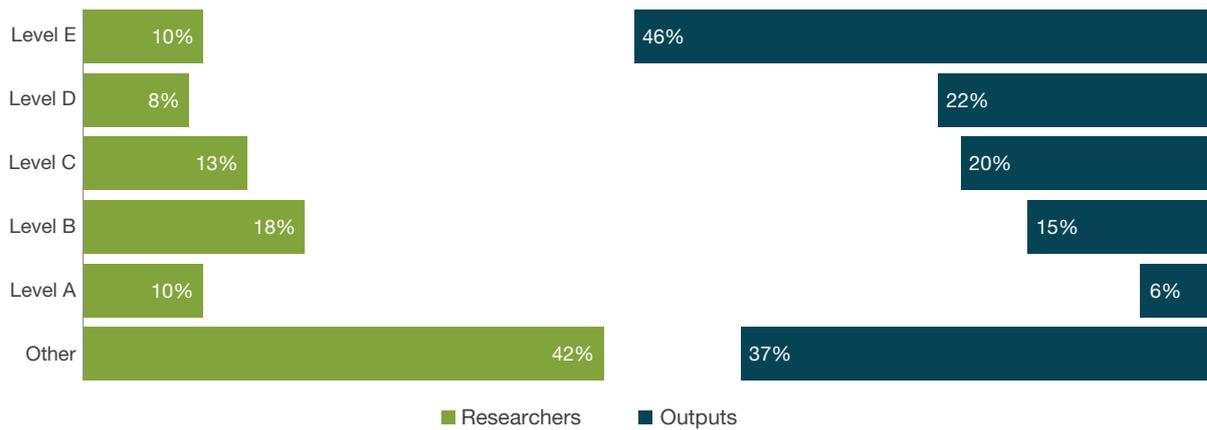

**09 ENGINEERING – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

**12 BUILT ENVIRONMENT AND DESIGN – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

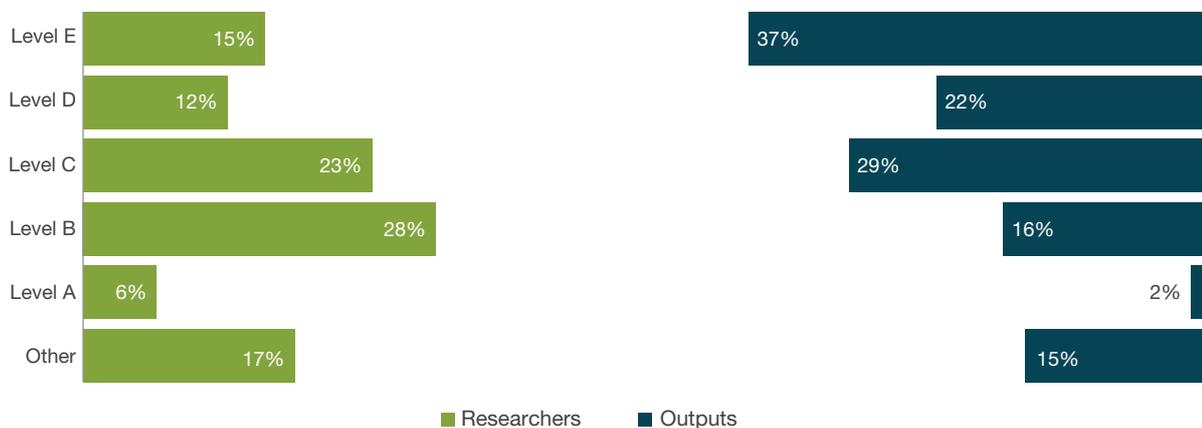

**13 EDUCATION – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

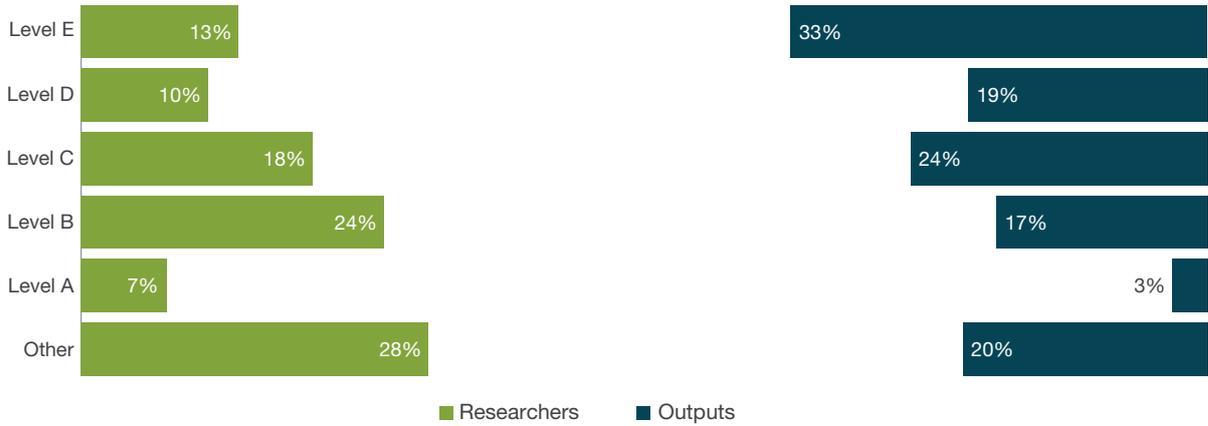

**14 ECONOMICS – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

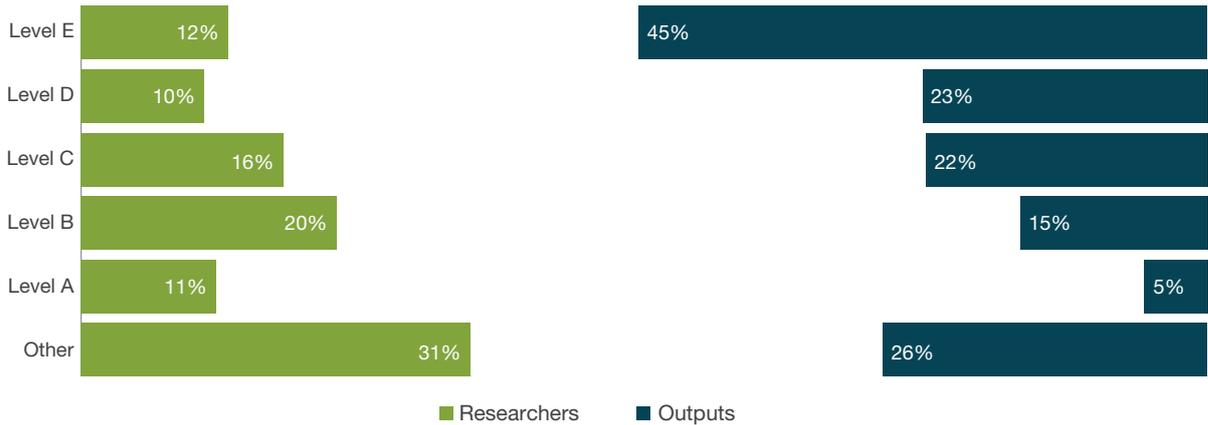

**15 COMMERCE, MANAGEMENT, TOURISM AND SERVICES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

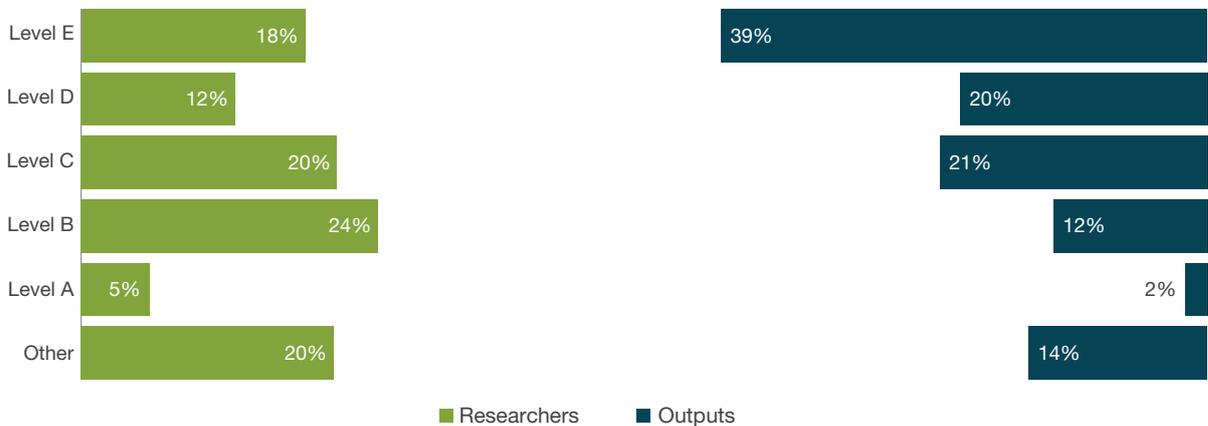

**16 STUDIES IN HUMAN SOCIETY – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

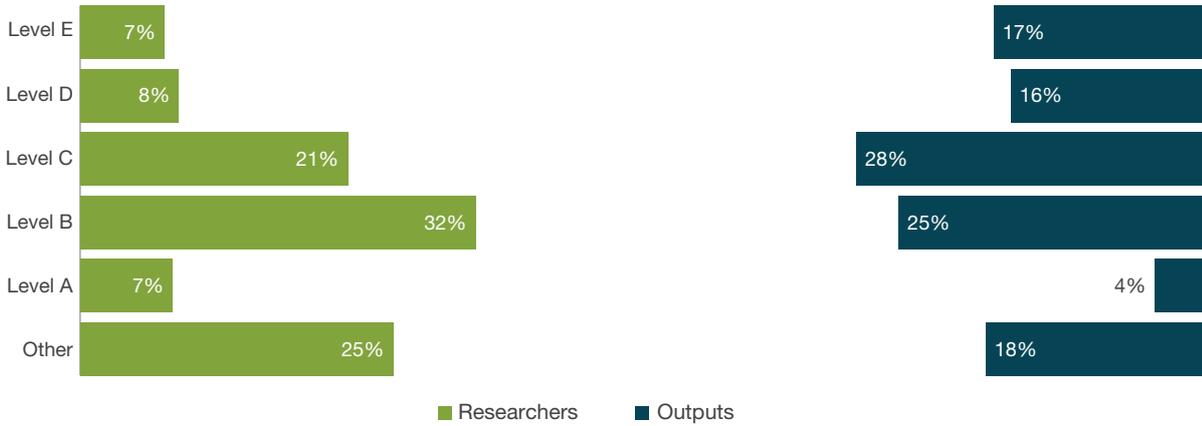

**17 PSYCHOLOGY AND COGNITIVE SCIENCES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

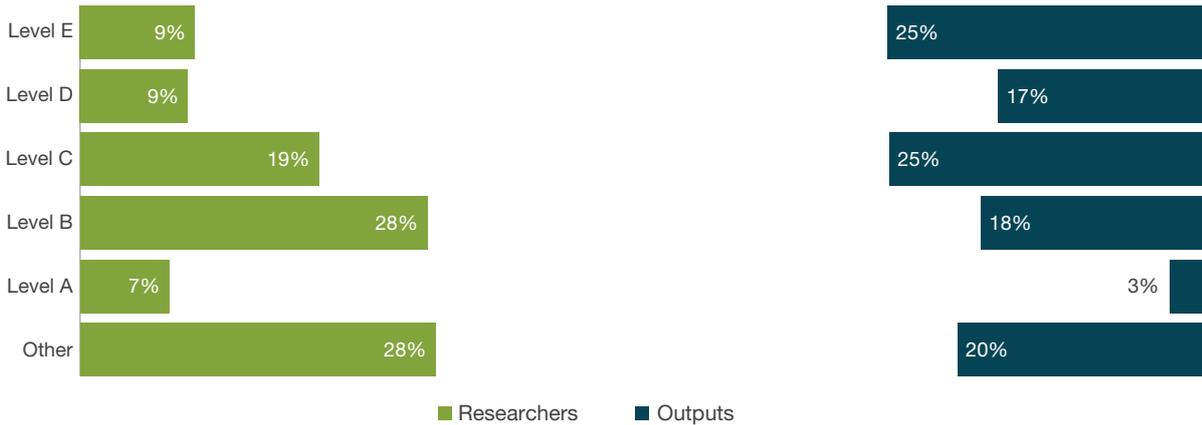

**18 LAW – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

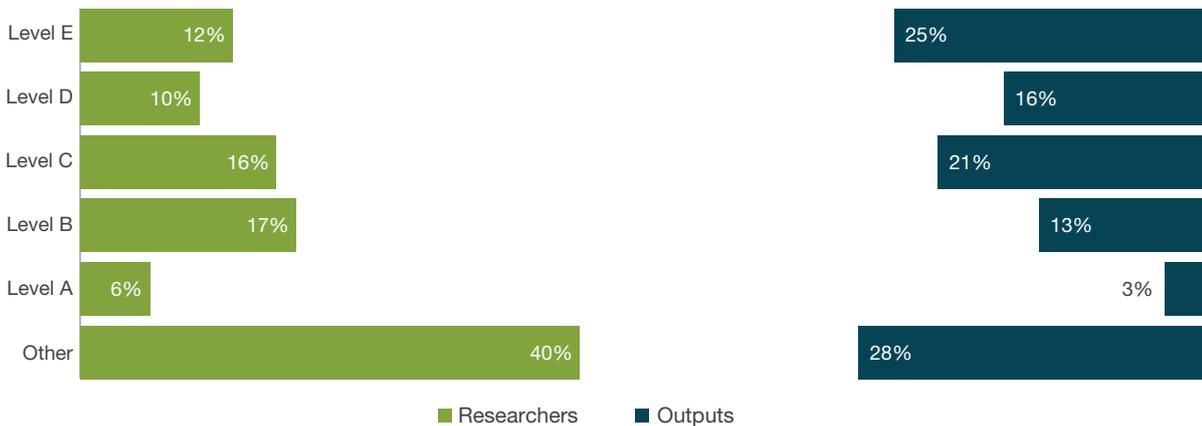

**19 STUDIES IN CREATIVE ARTS AND WRITING – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

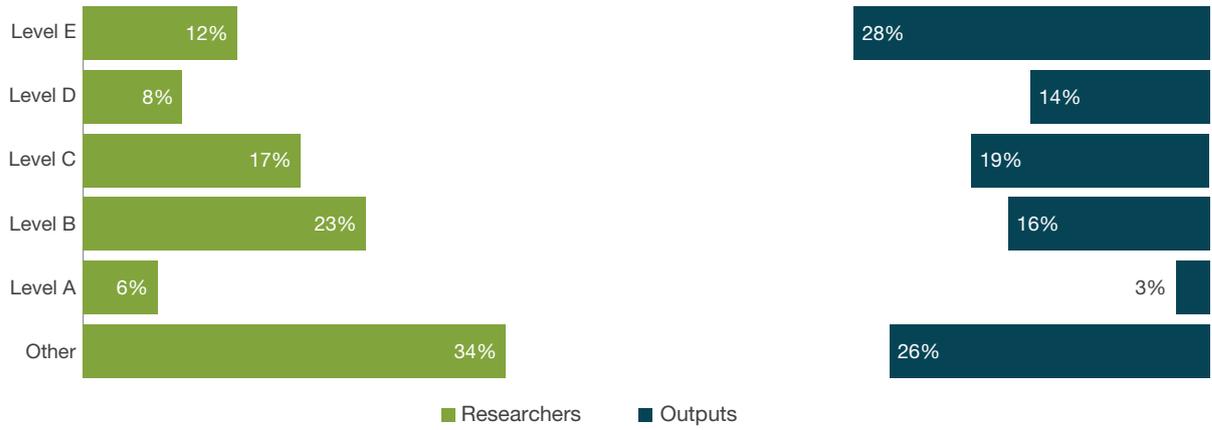

**20 LANGUAGE, COMMUNICATION AND CULTURE – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

**21 HISTORY AND ARCHAEOLOGY – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

**22 PHILOSOPHY AND RELIGIOUS STUDIES – DISTRIBUTION OF RESEARCHERS AND OUTPUTS BY EMPLOYMENT LEVEL**

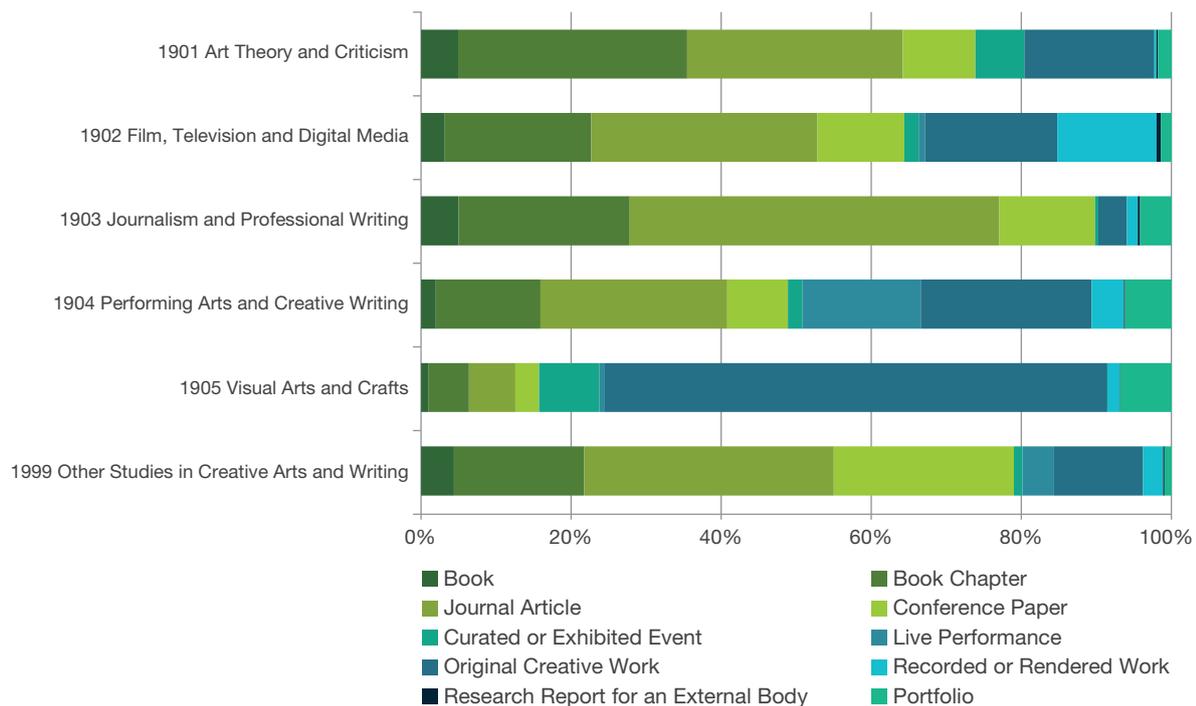

## Non–Traditional Research Outputs

Non–traditional research outputs provide an important insight into applied research, and creative and practitioner–based research in the Humanities, Creative Arts and Social Sciences. The provision within the ERA framework for portfolios allows for related works that demonstrate coherent research content to be submitted and reviewed as a single output. This is particularly important in the case of applied, creative and practitioner–based research, where a body of work needs to be viewed as a whole so that the full significance of the research involved can be considered. Over 5,000 original creative works, 913 live performances, 727 recorded or rendered works, 753 curated or exhibited events, 791 portfolios and 2,453 research reports for an external body were submitted to ERA 2015. Studies in Creative Arts and Writing (19) submitted the highest number of non–traditional research outputs for assessment. See **Section 4** for a more detailed breakdown.

### Studies in Creative Arts and Writing

In 19 Studies in Creative Arts and Writing disciplines, original creative works represent the greatest proportion (61 per cent ) of all non–traditional research outputs. Of all the four–digit FoR codes in this discipline, 1905 Visual Arts and Crafts submitted 2,244 original creative works, comprising 67 per cent of the total research output. See **Section 4** for a more detailed breakdown.

## Employment Function

The function of an eligible researcher describes the general type of work which they have formally agreed with the institution to undertake. For ERA purposes, the function of an eligible researcher can be described only as 'Research Only', 'Teaching and Research', or 'Other Function':

- › **Research Only**—this function involves undertaking only research work or providing technical or professional research assistance, or the management and leadership of research staff and of staff who support research staff. There may be limited other work (e.g. participation in the development of postgraduate courses and supervision of postgraduate students). This definition is to be interpreted as having the same content as the HESDC definition of 'A Research Only function'.
- › **Teaching and Research**—in addition to the activities undertaken in the Research Only function, this function also involves undertaking teaching and associated activities (including lecturing, group or individual tutoring, preparation of teaching materials, supervision of students, marking, and preparation for the foregoing activities), or the management and leadership of teaching staff and research staff and persons who support such staff. This definition is to be interpreted as having the same content as the HESDC definition of 'A Teaching and Research Function'.
- › **Other Function**—functions other than 'Research Only' or 'Teaching and Research'. A researcher whose function is 'Teaching Only' who has produced one or more submitted research outputs should be classified as 'Other Function'. This definition is to be interpreted as having the same content as the combined HESDC definitions of 'A Teaching Only Function' and 'An Other Function'<sup>3</sup>.

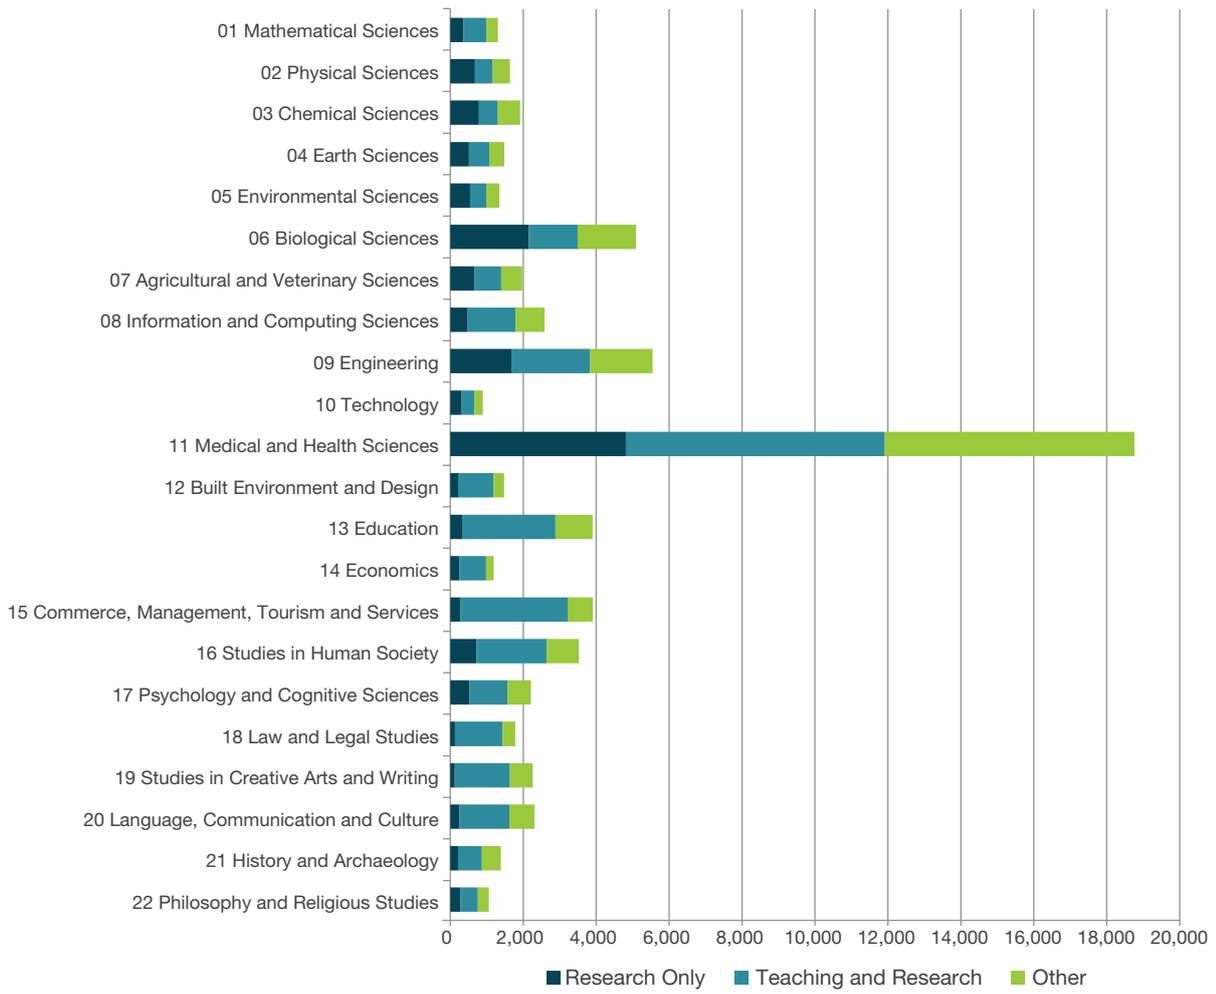

In the case of a staff member holding multiple functions within an institution, the institution has chosen the most applicable function to submit.

The first chart shows the apportioned headcount for two-digit FoRs of all staff submitted to ERA 2015 by institutions and includes the employed, employed casual and other employment types.

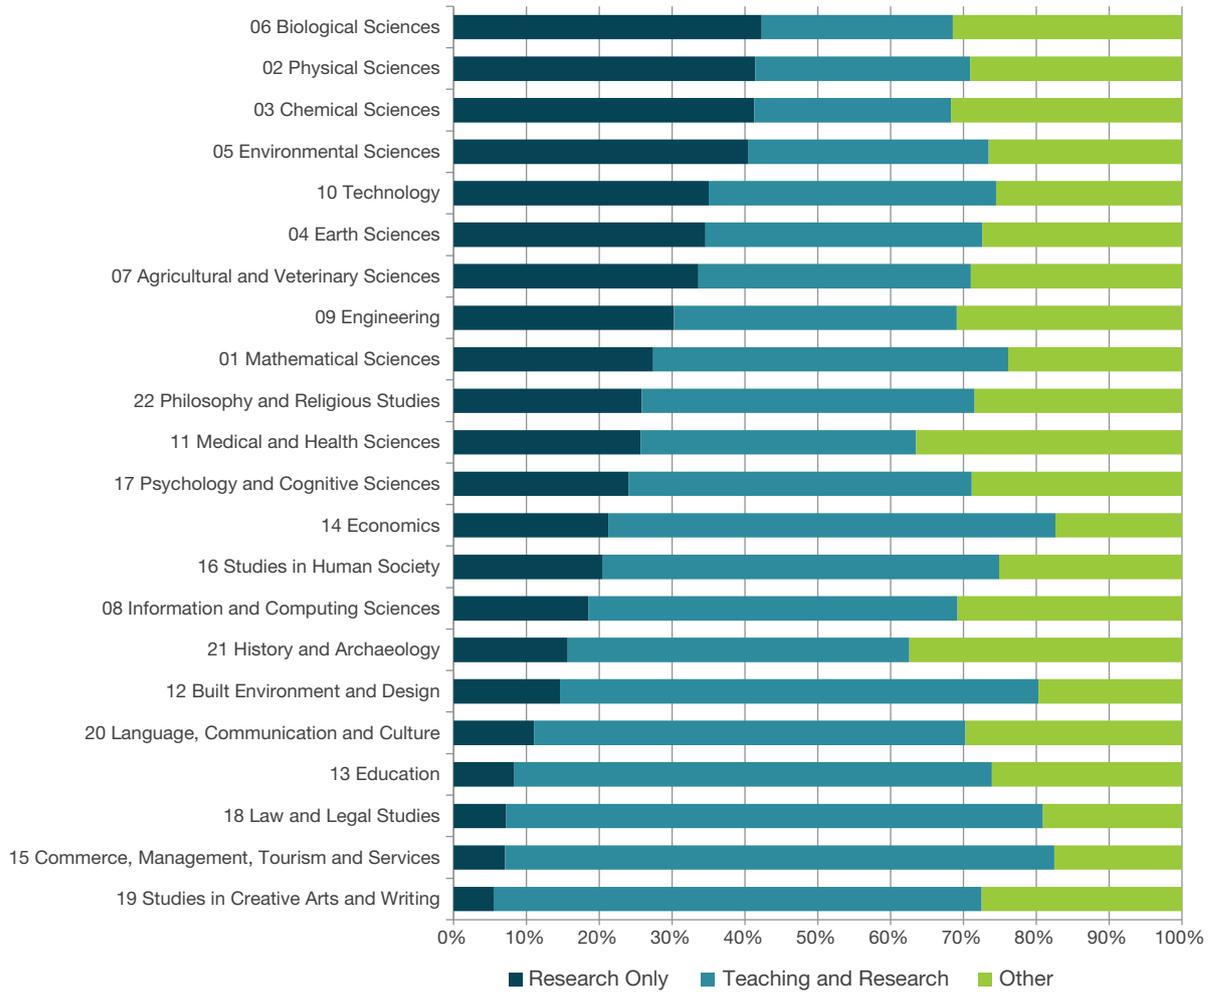

The second chart shows the percentage distribution for two-digit apportioned headcount of all staff by employment function. It is ordered by 'Research Only' employment function. The two-digit FoR codes with the highest proportion of Research Only staff are 06 Biological Sciences (42 per cent), 02 Physical Sciences (41 per cent) and 03 Chemical Sciences (41 per cent).

<sup>3</sup> [heimshelp.education.gov.au/sites/heimshelp/resources/glossary/pages/glossaryterm?title=Function](http://heimshelp.education.gov.au/sites/heimshelp/resources/glossary/pages/glossaryterm?title=Function)

**TWO-DIGIT APPORTIONED HEADCOUNT OF ALL STAFF BY EMPLOYMENT FUNCTION**

**PERCENTAGE DISTRIBUTION TWO-DIGIT APPORTIONED HEADCOUNT OF ALL STAFF BY EMPLOYMENT FUNCTION**

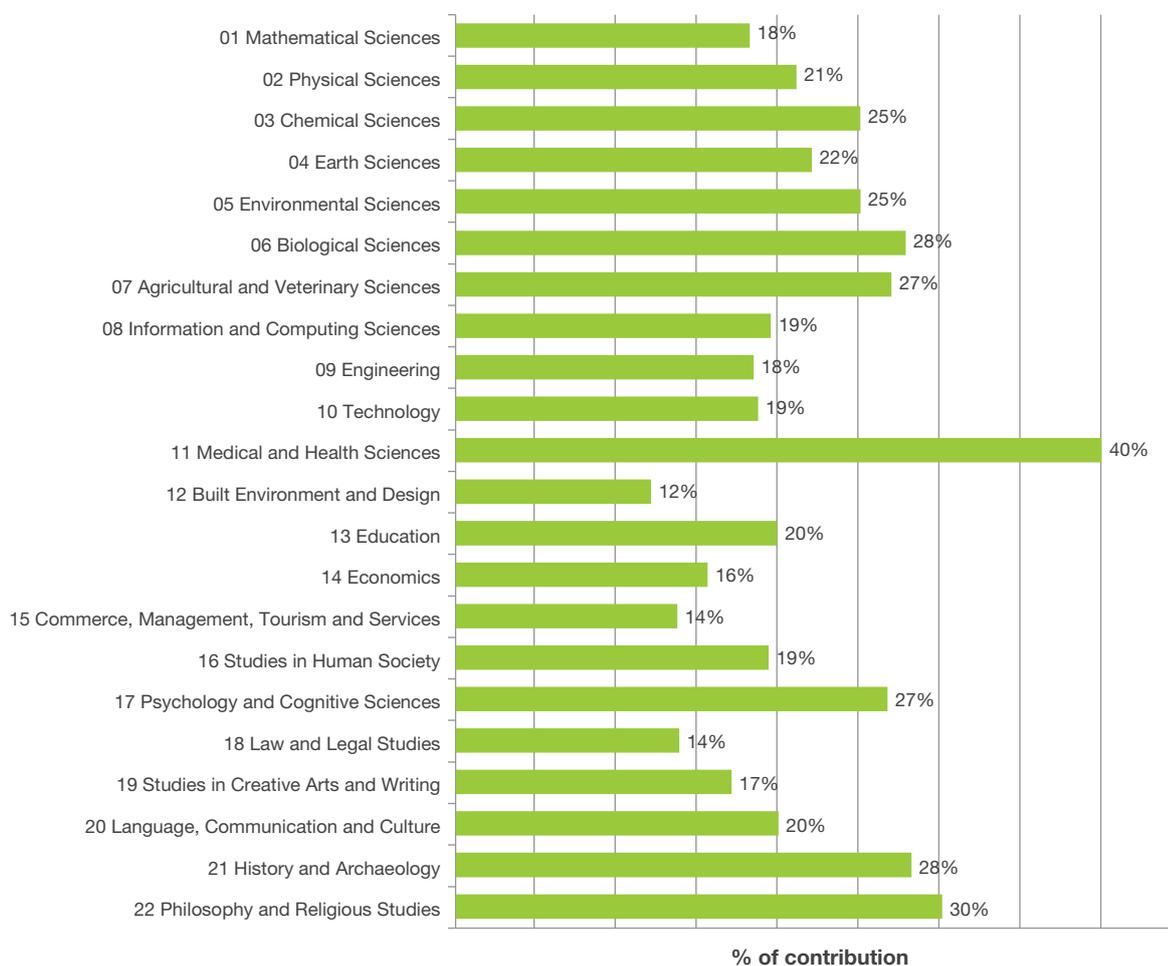

## Contribution of Non-salaried Staff

Non-salaried staff include emeritus, visiting, exchange or seconded staff, unpaid visiting fellows, members of religious denominations, conjoint, clinical and adjunct staff with a demonstrated publication association with an eligible institution. These researchers make an important contribution to the Australian university research sector and broader research community, contributing as authors to 25 per cent of all outputs for ERA.

The chart shows the proportion of outputs where one or more eligible authors are non-salaried staff. This proportion is the greatest for the 11 Medical and Health Sciences, where non-salaried staff contributed as authors to 40 per cent of all outputs.

### OUTPUTS CONTRIBUTED TO BY NON-SALARIED STAFF BY TWO DIGIT FOR CODE

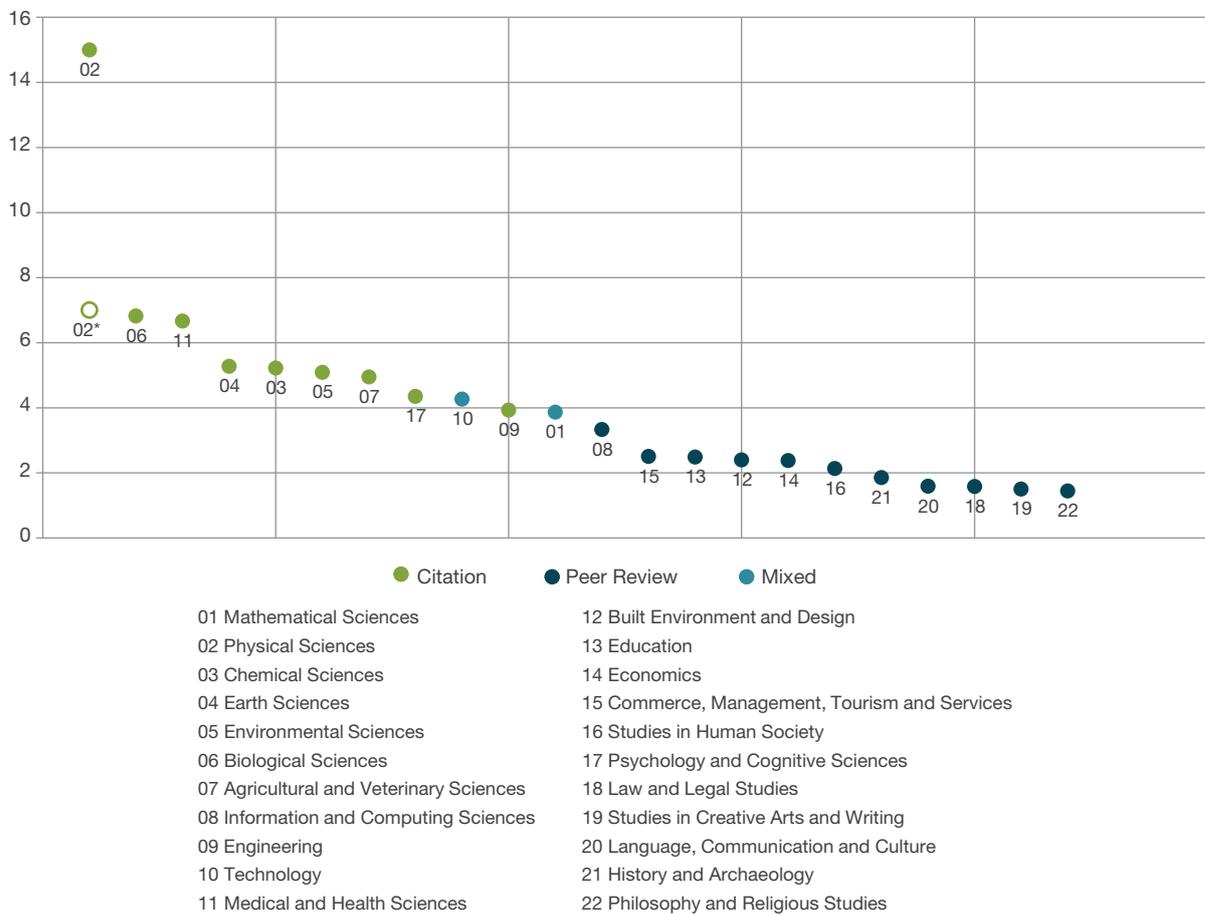

## Co-authorship by ERA Authors

The average number of authors per research output submitted to ERA 2015 varied significantly between two-digit FoR codes. The 02 Physical Sciences showed the highest average number of authors on research outputs, in accordance with the common practice in some sub-disciplines of collaborating with many others on journal articles. In general, research outputs submitted to ERA citation analysis disciplines had more authors than those submitted to peer review disciplines.

There is also a relationship between research output type and the number of authors per research output. Journal articles are the most commonly co-authored research outputs. In ERA peer review disciplines, there is generally a larger proportion of books, book chapters and conference papers, which tend to have fewer authors.

### AVERAGE AUTHORS/OUTPUTS BY TWO-DIGIT FOR CODE

\*Presents the average authors/output for Physical Sciences (02) not including Astronomical and Space Sciences (FoR 0201). Astronomical and Space Sciences has an average authors/output of about 34 compared with the average of about seven for the other four-digit FoRs in Physical Sciences.

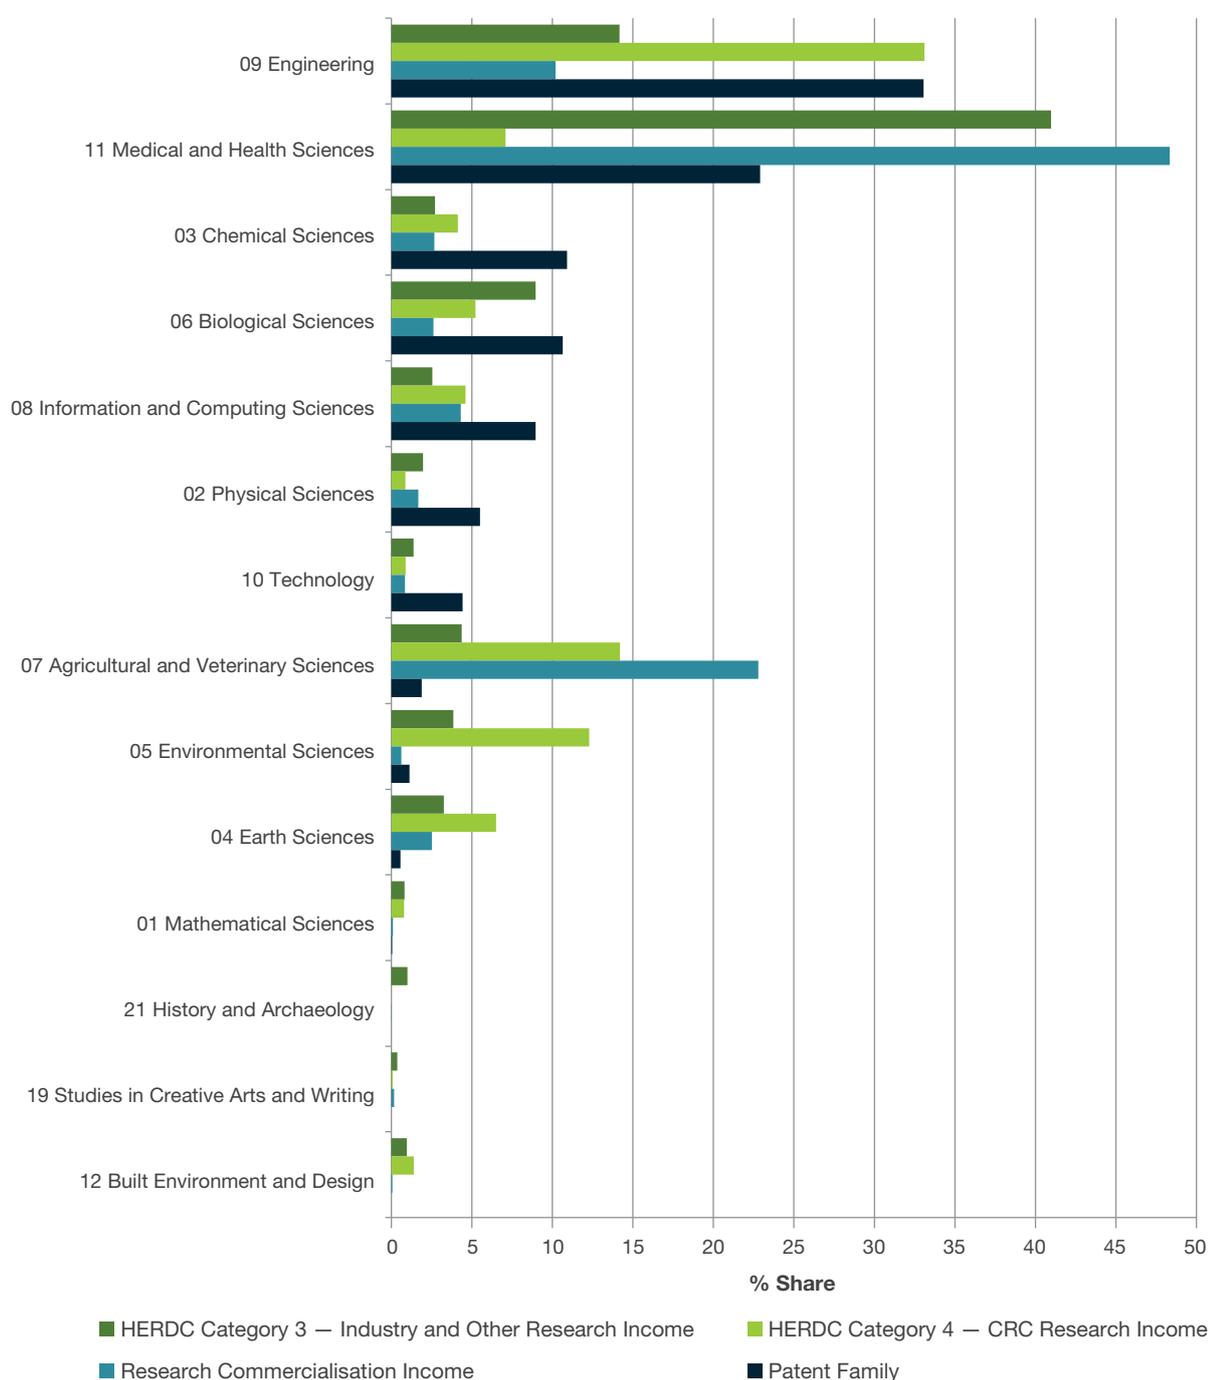

Note: Average authors per output was calculated on submitted outputs rather than deduplicated outputs.

## Patents and Applied Income Sources

In Australia, 09 Engineering and 11 Medical and Health Sciences both demonstrated strength in applied research, together being responsible for more than half of the patents registered in the three-year reference period that were submitted to ERA 2015. The 11 Medical and Health Sciences attracted the greatest investment from industry and reported the most research commercialisation income, which includes income generated from patents. However, 09 Engineering attracted the greatest share of CRC income.

The first chart shows the two-digit FoR codes which have patents as an applied measure ordered by number of patents. It also shows the HERDC Category 3 and 4 income, and the Research Commercialisation for these codes. See **Section 4** for a more detailed breakdown.

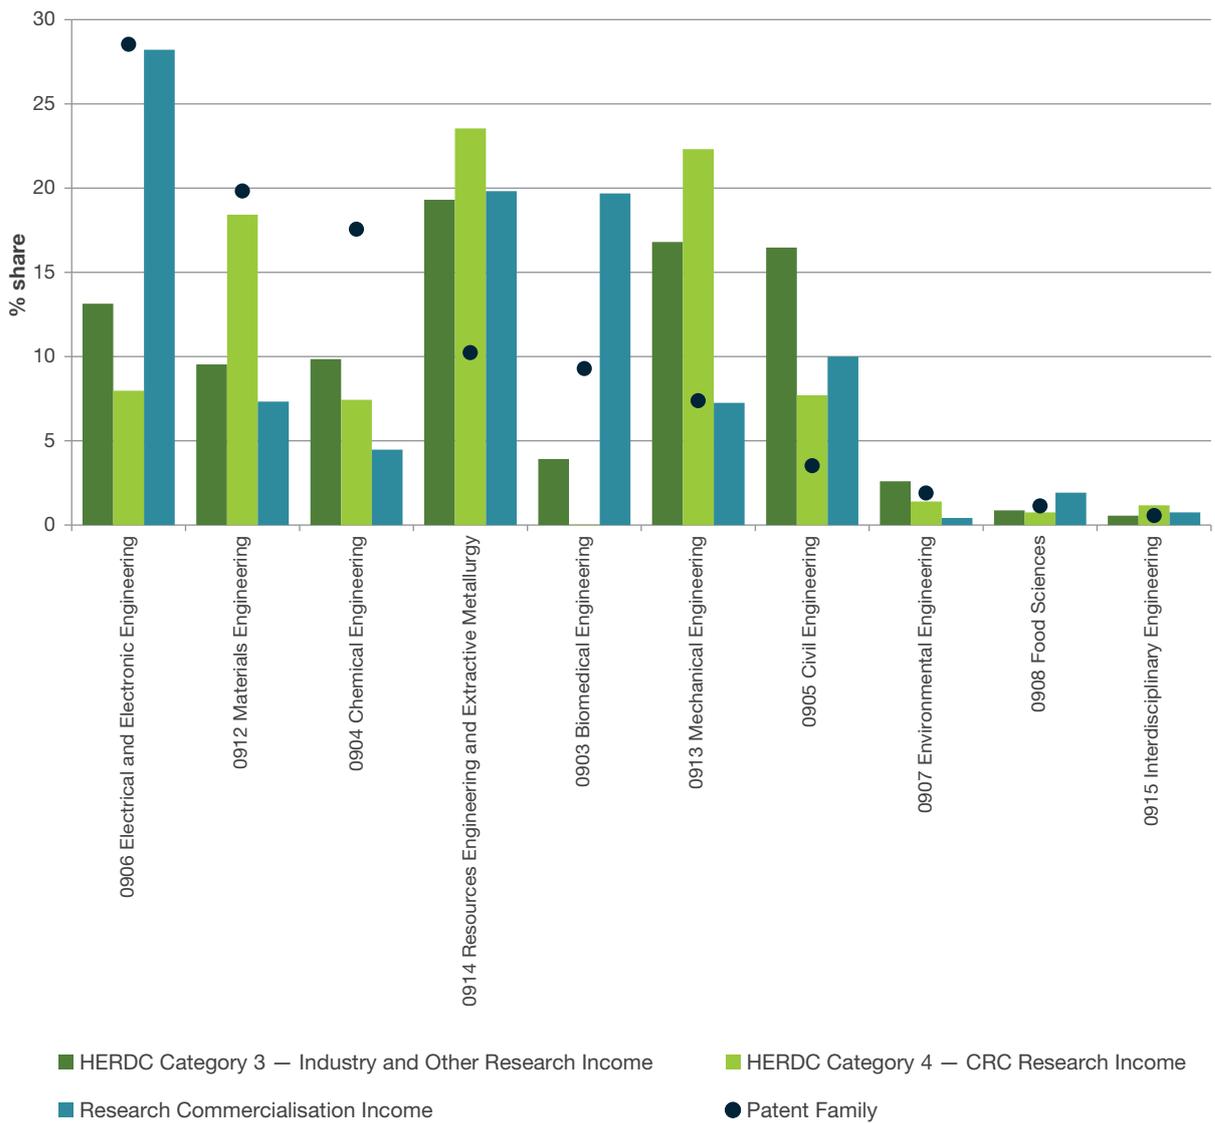

### PATENTS AND APPLIED INCOME SOURCES BY FOR CODE

**ENGINEERING PATENTS AND INCOME FROM APPLIED SOURCES**

Electrical and Electronic Engineering (0906) was responsible for the highest share of patents (29 per cent) within engineering and also producing high levels of research commercialisation income (28 per cent) while attracting moderate levels of support from industry and other research income sources (13 per cent) and CRC research income (eight per cent).

In contrast Resources Engineering and Extractive Metallurgy (0914) account for a 10 per cent share of patents however this field also reported a high proportion of the research commercialisation income (20 per cent), investment by industry and other research income sources (19 per cent) and CRC research income (24 per cent).

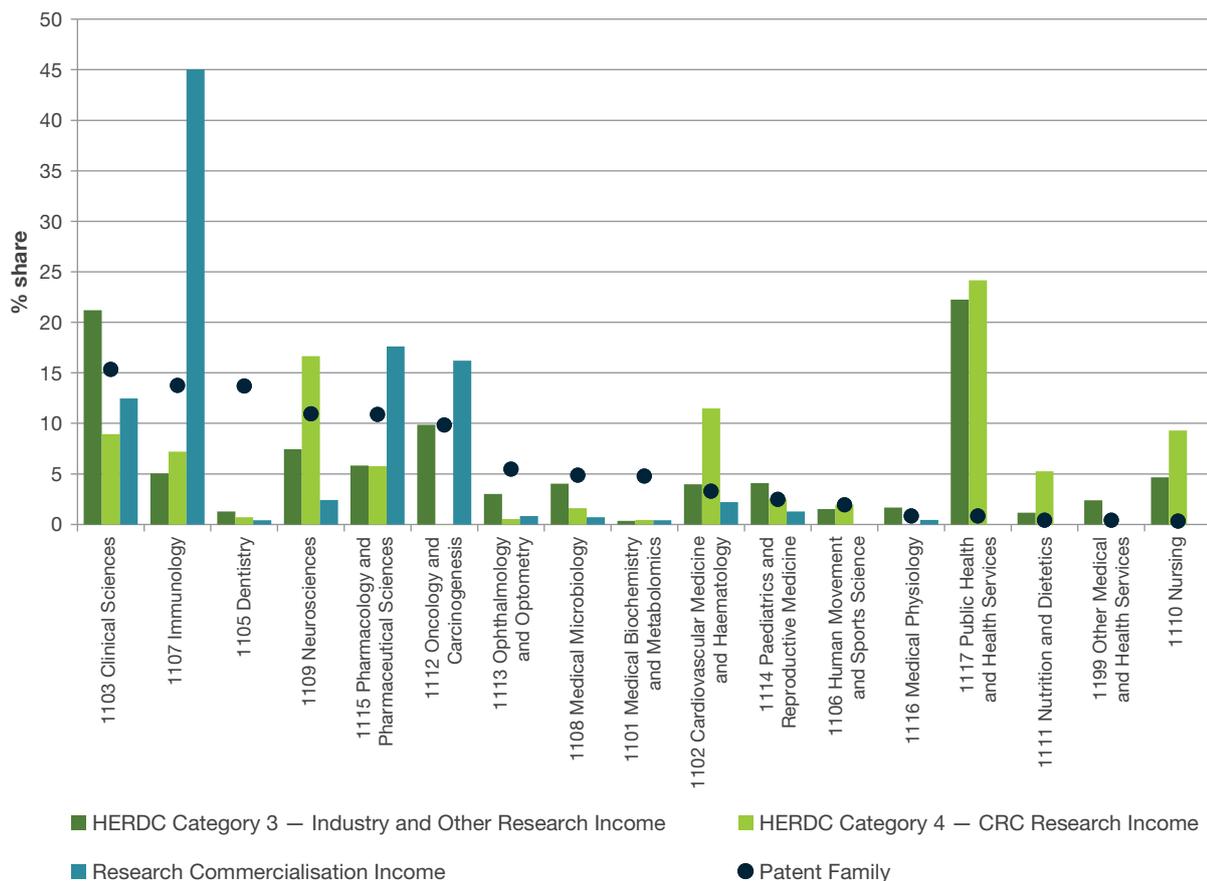

Note: Only four-digit Engineering codes with patents submitted are shown in the chart.

## MEDICAL AND HEALTH SCIENCES PATENTS AND INCOME FROM APPLIED SOURCES

Clinical Sciences (1103) produced the largest share of patents (15 per cent) within the 11 Medical and Health Sciences. This discipline was responsible for a 21 per cent share of income from industry and other research income sources, a 12 per cent share of the reported research commercialisation income, and nine per cent share of CRC research income.

Immunology (1107) reported the greatest amount of research commercialisation income, comprising 45 per cent of that income type for all of the 11 Medical and Health Sciences.

Note: Four-digit Medical and Health Sciences codes that had no patents are not shown in the chart.

# ADDITIONAL REPORTING ON ERA 2015

ERA is an assessment system that evaluates the quality of the research conducted at Australian universities by discipline. It identifies the research strengths of individual universities and of the sector as a whole. It also highlights disciplines where there are opportunities to develop the research capacities of Australian universities.

All eligible institutions submit comprehensive information to the ARC about their research activities, including details relating to staff, publications and other research outputs, awards, grants, income from industry and other research users, income from the commercialisation of research, and other applied measures such as patents. Submitted items can be coded to multiple fields of research, facilitating the capture of interdisciplinary activity. Committees of internationally-recognised researchers evaluate this material by discipline. Their expert judgments are informed by a range of summary indicators and quality assessments derived from the data submitted.

The *State of Australian University Research: Volume 1 ERA National Report* provides the first detailed look at the information submitted by Australian eligible institutions to the ERA evaluation and the ratings decisions made by Research Evaluation Committees (RECs) of internationally-recognised researchers. Subsequent volumes of this report will provide in-depth analysis of selected topics, these analysis will include such topics such as volume and activity, gender, open access and other areas of interest.

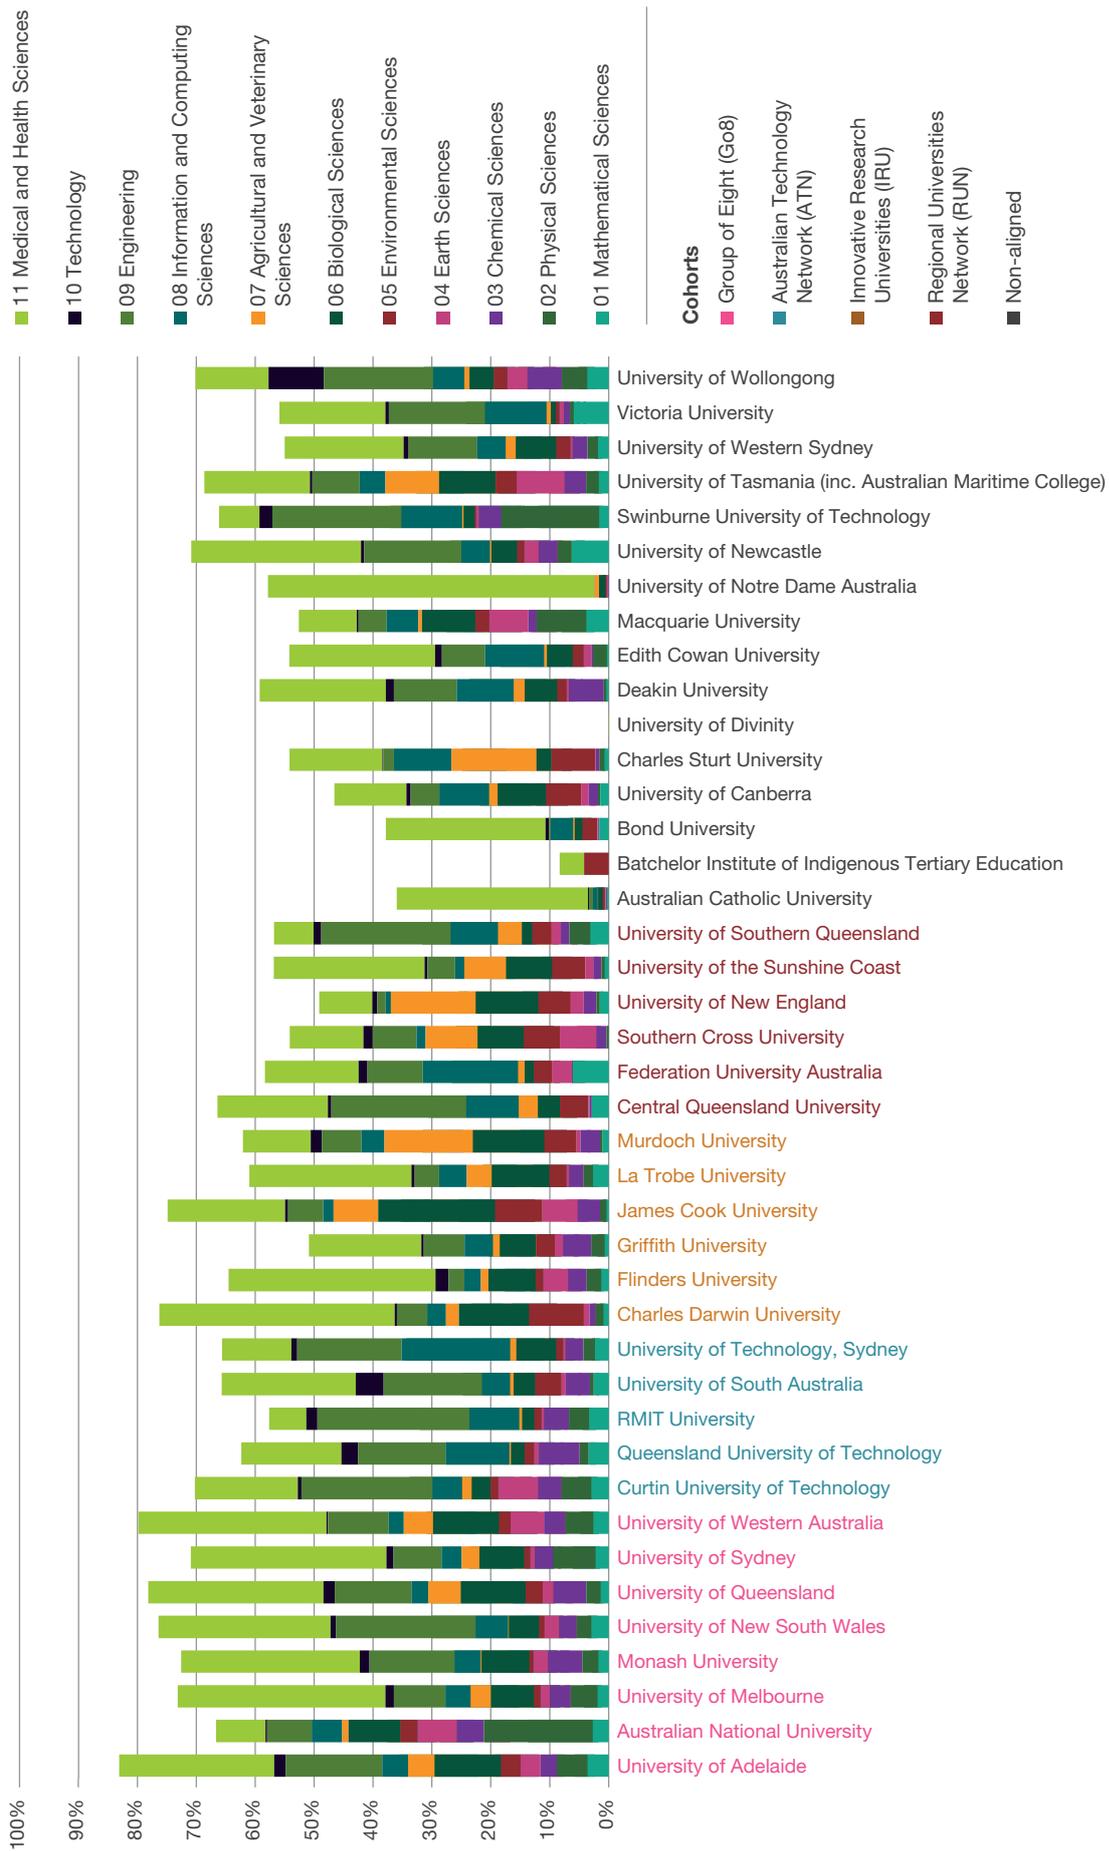

The following part of this section provides some preliminary analysis of the diversity within institutions in terms of the volume of research outputs and submitted FTE staff. In addition, there is a brief look at the gender and open access reporting that was first introduced in ERA 2015 (this information was requested for reporting information only, it was not presented to Research Evaluation Committees during evaluation).

## Diversity within Institutions

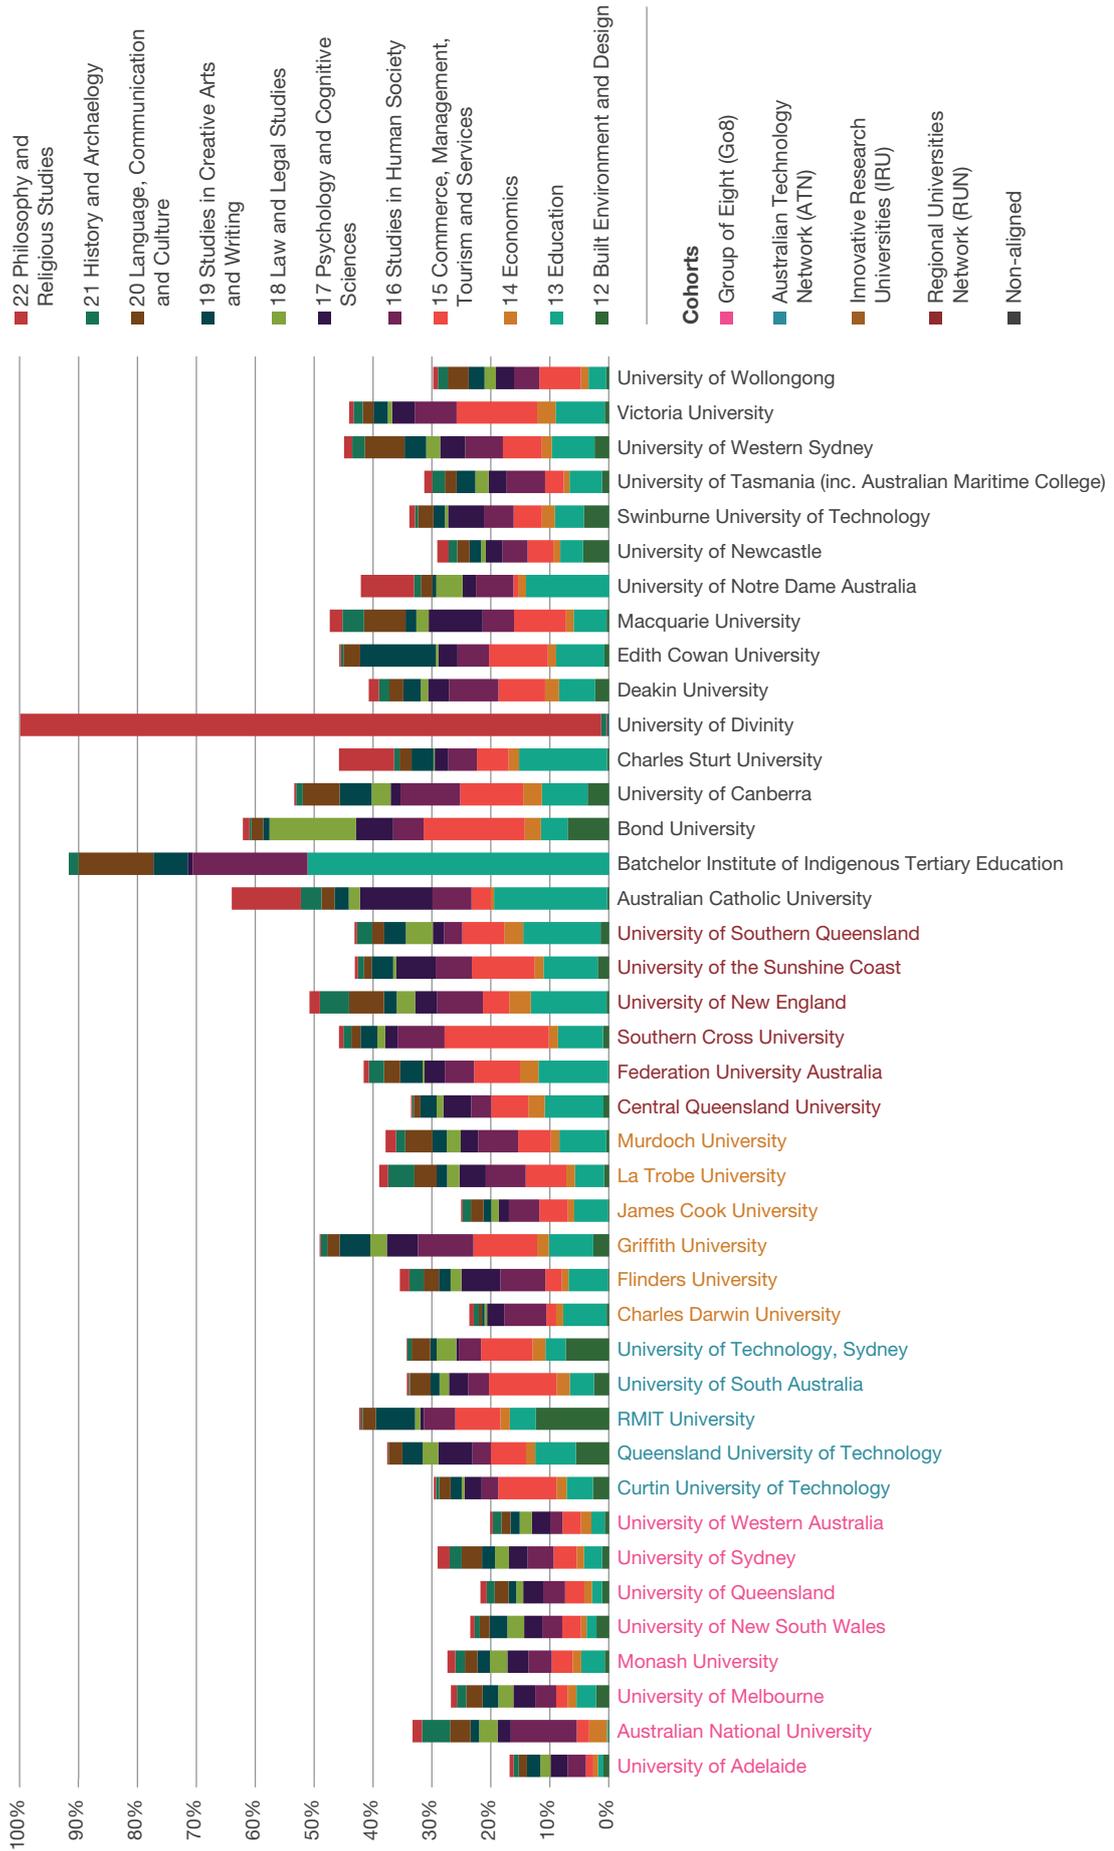

The following charts show the percentage distribution of submitted outputs and FTE staff across two-digit FoR codes by institution. The institutions are grouped by cohort (i.e. Group of Eight (Go8), Australian Technology Network (ATN), Innovative Research Universities (IRU), Regional Universities Network (RUN), and non-aligned). These charts highlight the considerable diversity in discipline focus between institutions and across cohorts—a key strength of the Australian higher education sector.

The first chart shows what percentage of outputs each institution submitted under FoR codes 01 Mathematical Sciences through to 11 Medical and Health Sciences; the second chart shows each institution's output distribution across codes 12 Built Environment and Design through to 22 Philosophy and Religious Studies. The third and fourth charts show the distribution of submitted FTE staff for each institution.

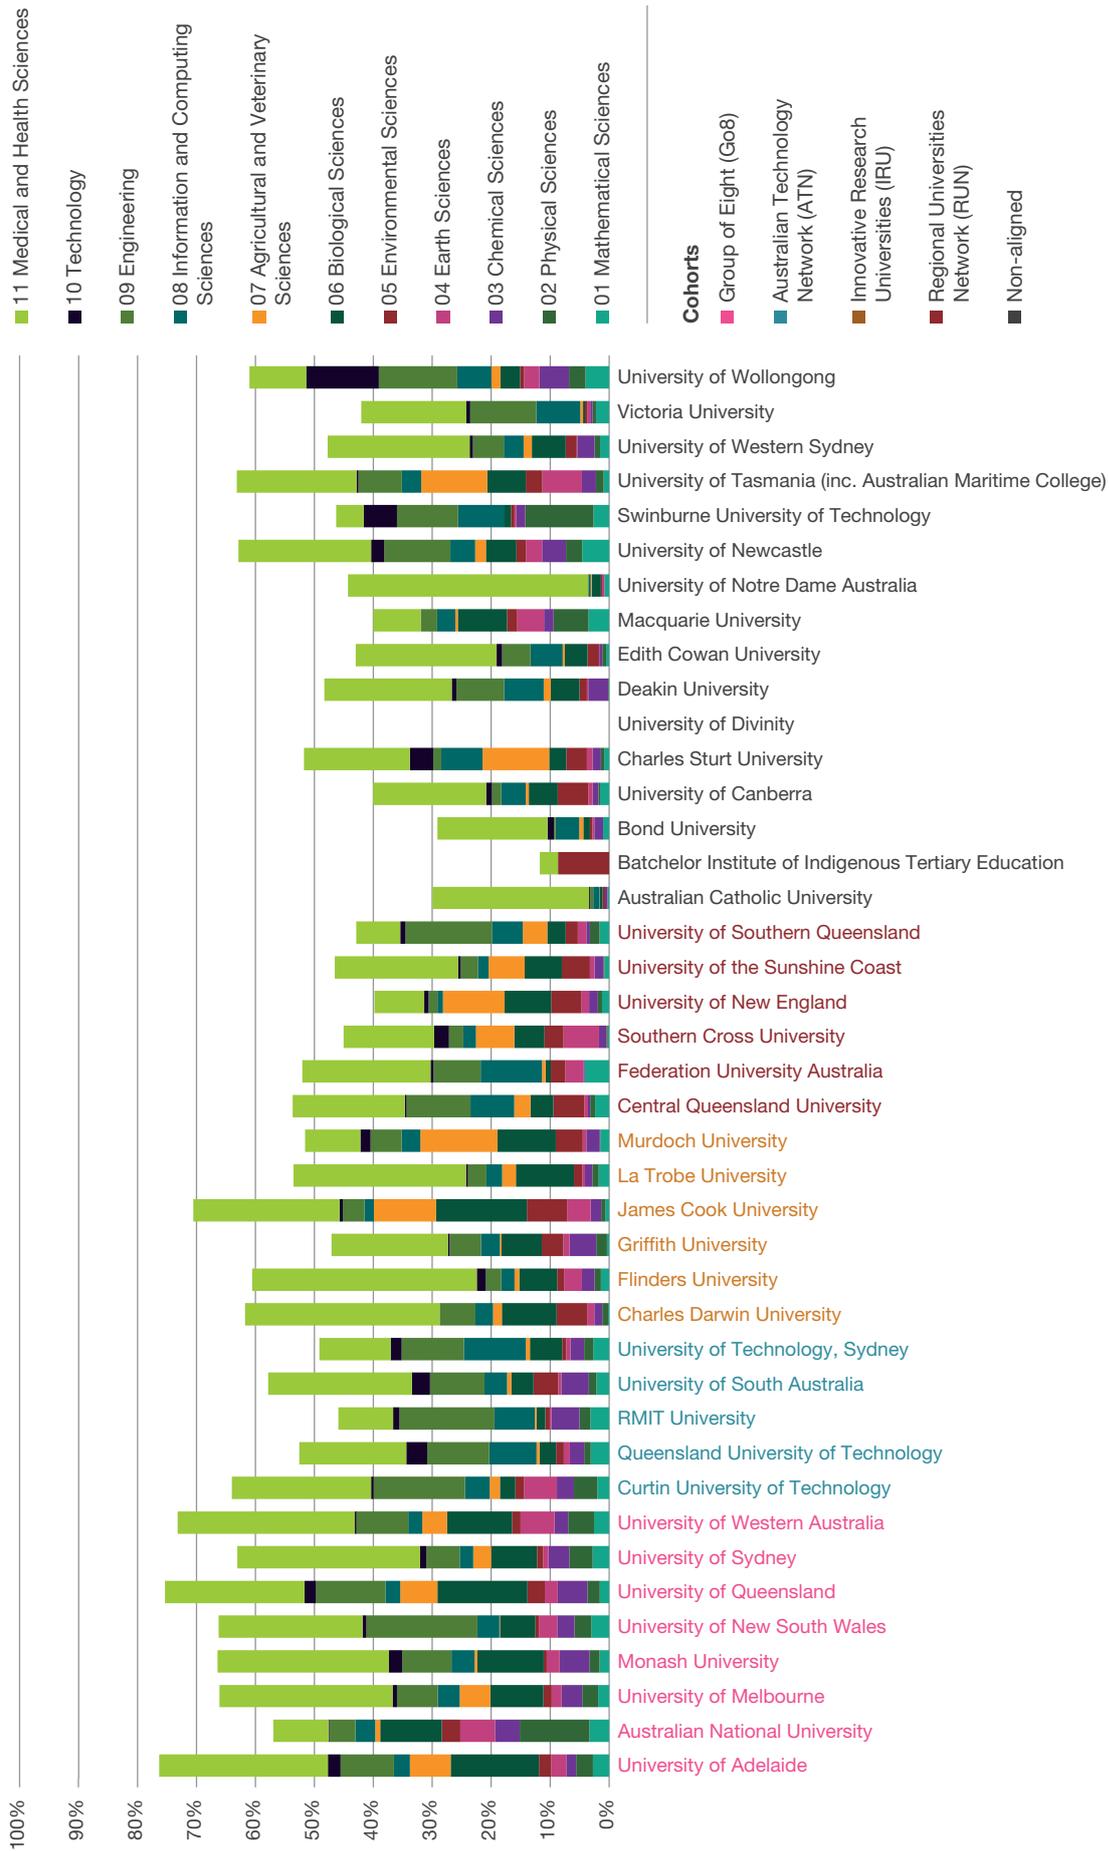

DISTRIBUTION OF SUBMITTED OUTPUTS BY FOR CODE (01 TO 11) AND INSTITUTION

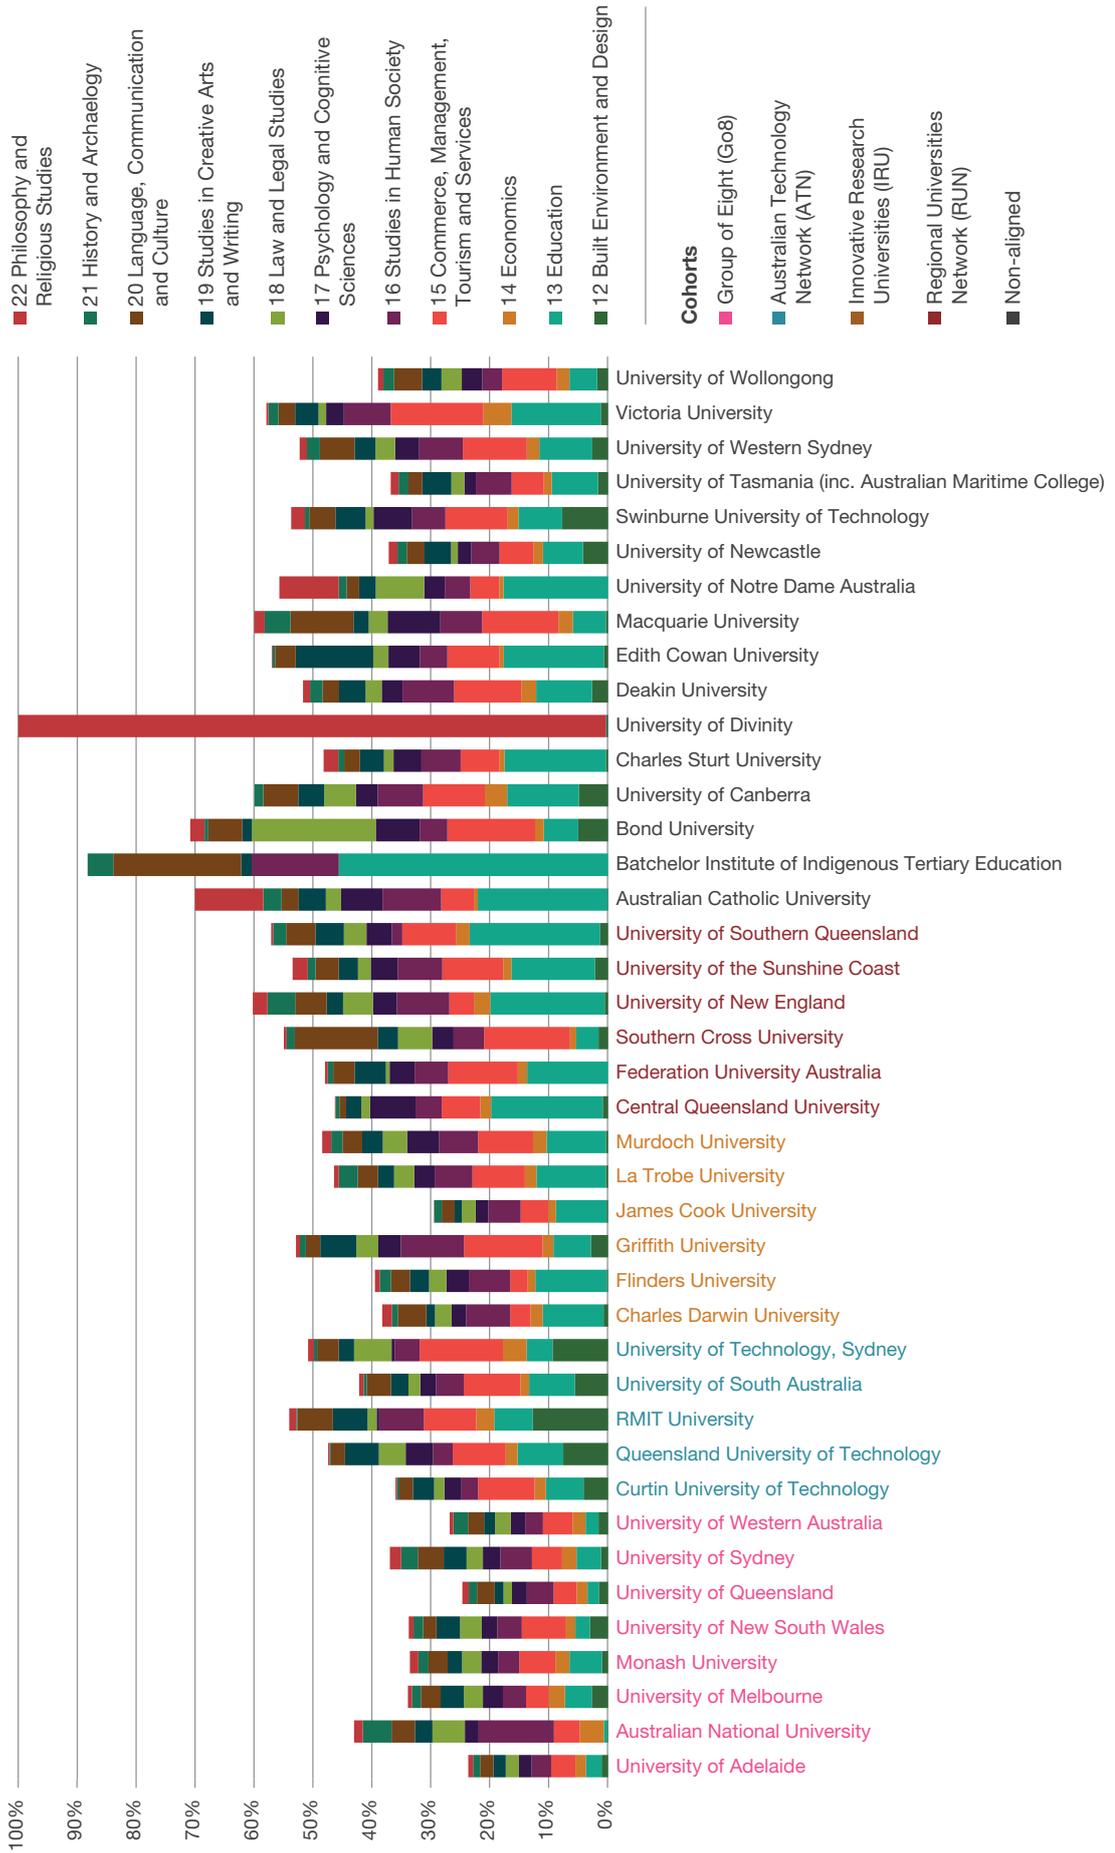

DISTRIBUTION OF SUBMITTED OUTPUTS BY FOR CODE (12 TO 22) AND INSTITUTION

DISTRIBUTION OF SUBMITTED FTE STAFF BY FOR CODE (01 TO 11) AND INSTITUTION

DISTRIBUTION OF SUBMITTED FTE STAFF BY FOR CODE (12 TO 22) AND INSTITUTION

## Gender

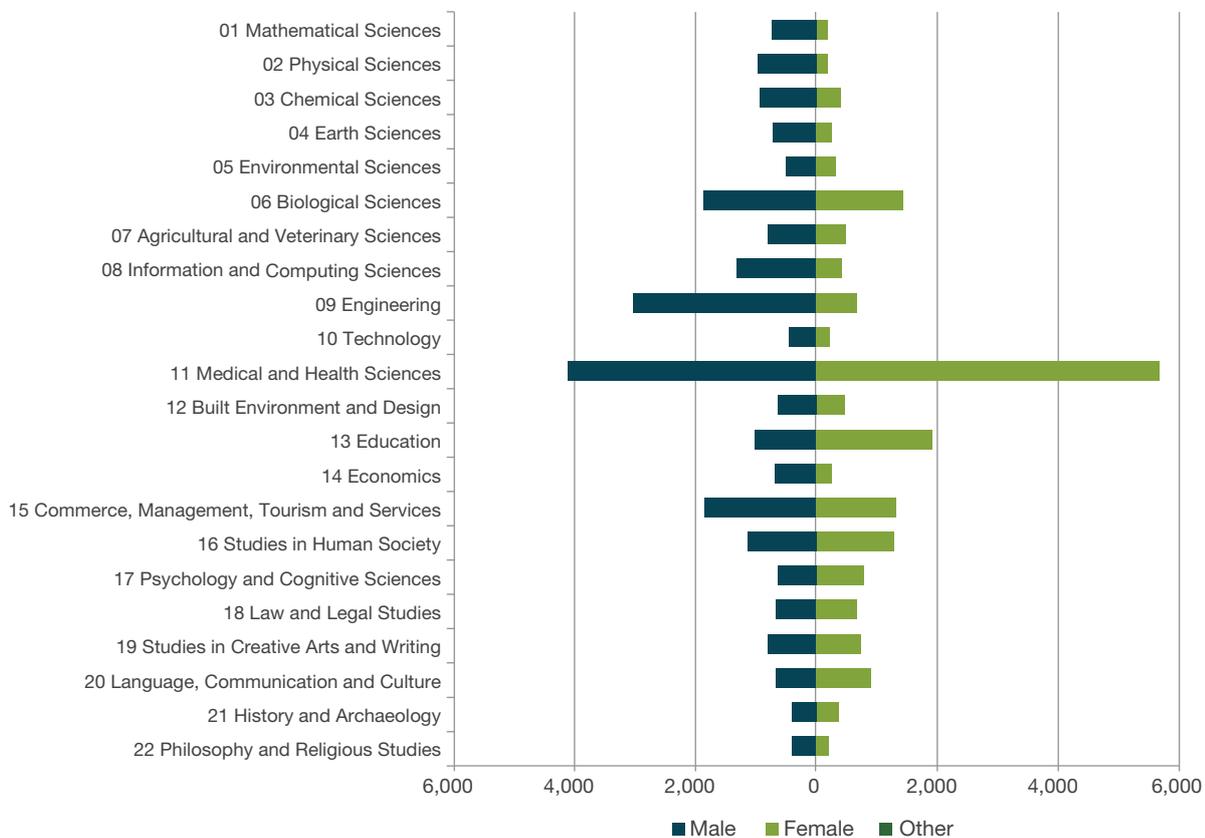

In ERA 2015, institutions were required to submit gender data for each eligible researcher. The gender of the eligible researcher was provided as either ‘Male’, ‘Female’, or ‘Other’.

Gender data were collected for aggregate reporting and internal ARC analysis only, this information was not provided to peer reviewers or Research Evaluation Committees (RECs) and was not used as part of the ERA 2015 evaluation process.

The following two charts show the number of FTE staff by gender by two-digit Fields of Research, and FTE staff by gender by employment level.

### NUMBER OF FTE STAFF BY GENDER BY TWO-DIGIT FOR CODE

The chart below shows the number of FTE staff working in eligible institutions by two-digit Fields of Research.

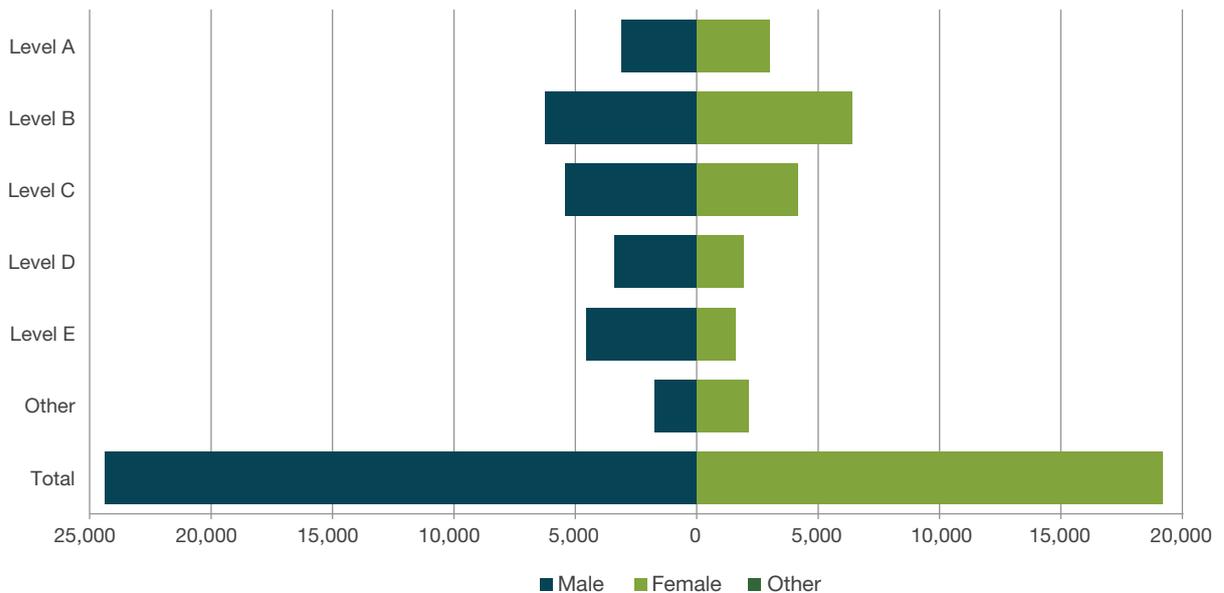

Note: Only 15.8 FTE staff were reported as ‘other’ by institutions, these do not appear on the chart due to the scale.

## NUMBER OF FTE STAFF BY GENDER BY EMPLOYMENT LEVEL

The following chart shows the number of FTE staff by gender by academic level and includes the levels collected for ERA purposes, academic levels A–E and ‘other’ employment level:

- › Level A — Tutor/Associate Lecturer
- › Level B — Lecturer
- › Level C — Senior Lecturer
- › Level D — Reader/Associate Professor
- › Level E — Professor
- › ‘Other’, as an employment category, represents staff members who are employed at a eligible institution, which includes: teaching only, administrative staff and contractors to the university who are not classified as academic level A–E.

The employment level with the highest number of both males and females for FTE staff was Level B.

Note: Only 15.8 FTE staff were reported as ‘other’ by institutions, these do not appear on the chart due to the scale.

## Open Access

As part of the ERA 2015 submission process, institutions were required to indicate whether a research output submitted to ERA had been made available in an open access repository. Eligible institutions were required to answer yes or no to this new and mandatory data requirement.

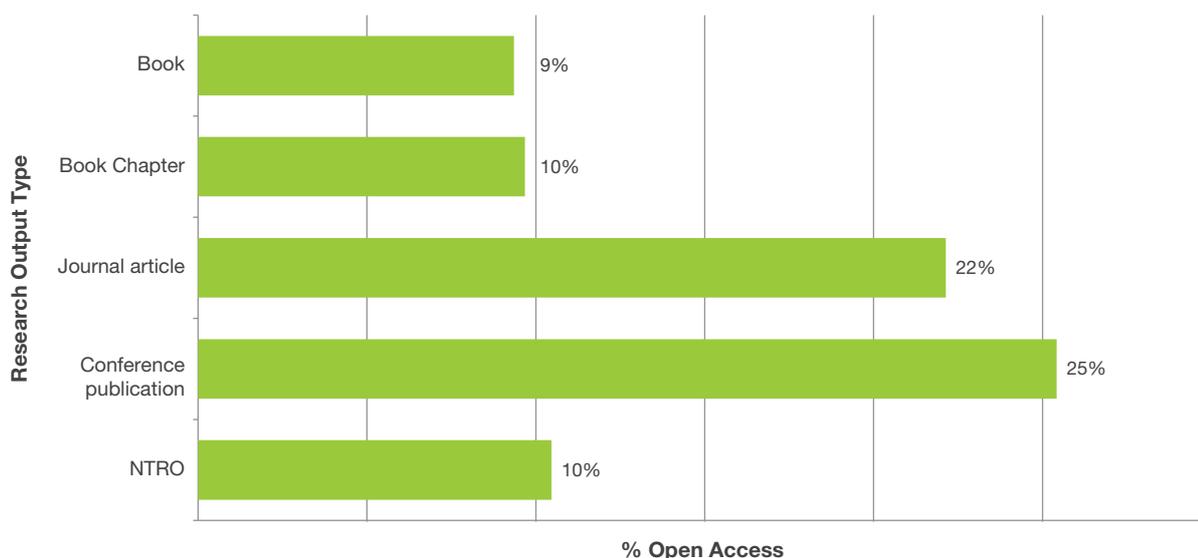

This open access data requirement will give the ARC some insight into the open access publishing trends in eligible institutions. However, open access data did not form part of the evaluation process and was not made available to peer reviewers or Research Evaluation Committees (RECs).

Since the supply of information on open access by institutions was a data requirement for ERA 2015 subsequent to the collection of the research outputs by institutions, in many cases the institutions had to retrospectively answer this question. Institutions were asked to provide as accurate information as was possible. Therefore, the information should be treated with caution and will only form a baseline for more accurate reporting in any future rounds.

*Please note: the ARC Open Access Policy took effect from 1 January 2013. According to the policy, any publications arising from an ARC supported research project must be deposited into an open access institutional repository within a 12 month period from the date of publication. The ARC Open Access Policy incorporated all ARC Funding Rules and Agreements released after 1 January 2013. The policy does not apply retrospectively to pre-existing Funding Rules and Agreements.*

*Where depositing research outputs in an 'open access' repository is a condition of any funding which enabled the research to be undertaken, full public access to the research output(s) should exist, irrespective of the ERA submission process, as a result of the eligible researcher complying with that funding condition.*

### PERCENTAGE OF OPEN ACCESS RESEARCH OUTPUTS IN ERA 2015 SUBMISSIONS

Research Outputs	86
HERDC Research Income Summary (All Categories)	87
HERDC Category 1 — Australian Competitive Grants Research Income	88

Plant Breeder's Rights	100
National Health and Medical Research Council (NHMRC) Endorsed Guidelines	100
Research Commercialisation Income	101

**SECTION 2**

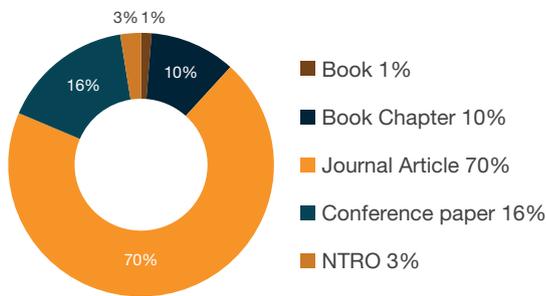

Overview by  
Two-Digit Fields of  
Research Code

**Section 2** provides a summary of ERA 2015 data at the two-digit Fields of Research (FoR) level for research outputs, HERDC income, staffing, esteem and applied measures. A detailed breakdown of all these indicators at the two-digit and four-digit levels is shown in **Section 4** of this report.

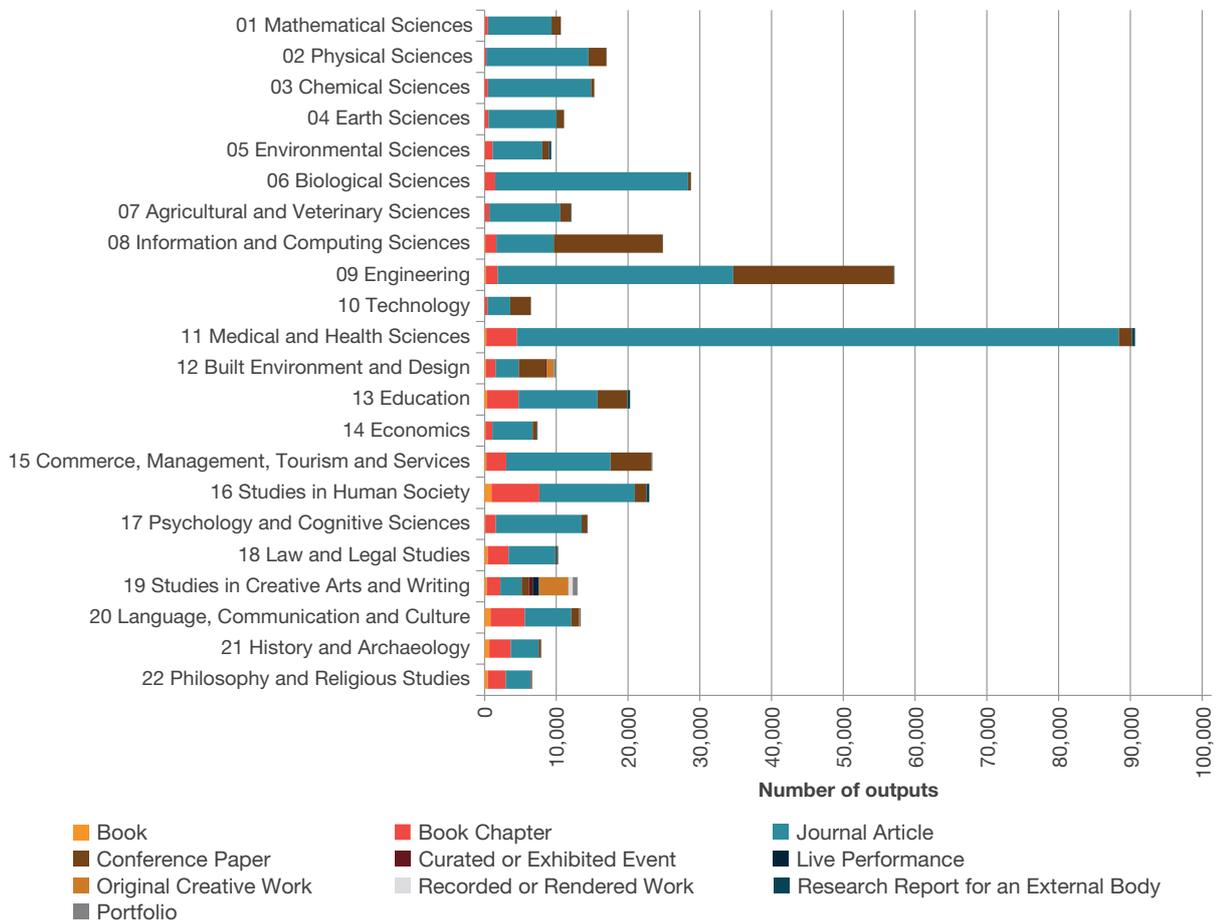

## Research Outputs

All 41 eligible higher education institutions submitted research outputs for evaluation to ERA 2015. Over 430,000 outputs across 157 four-digit Fields of Research (FoR) codes were submitted. The majority of the outputs were journal articles (70 per cent) followed by conference papers (16 per cent). Non-traditional research outputs (NTR0) constituted approximately three per cent of the outputs submitted to ERA 2015. See **Section 4** for a detailed breakdown.

### RESEARCH OUTPUTS BY TYPE – ALL SUBMITTED OUTPUTS

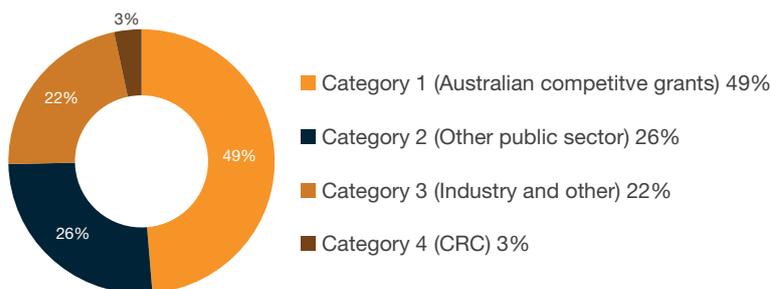

### RESEARCH OUTPUTS BY TYPE BY TWO-DIGIT FOR CODE

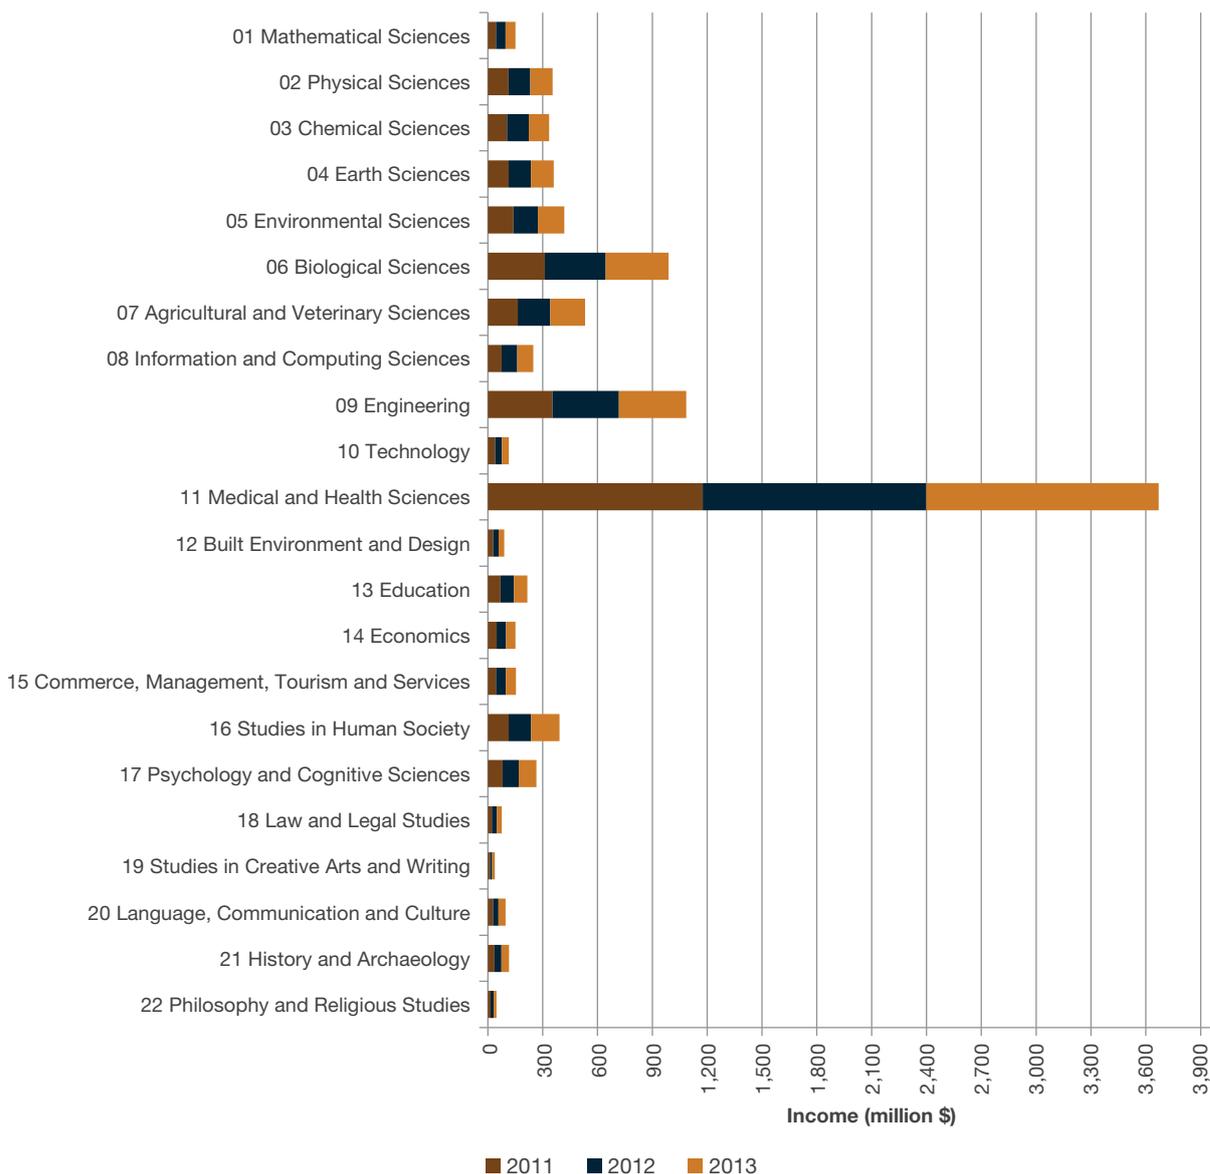

# HERDC Research Income Summary (All Categories)

Over \$9.90 billion in research funding was submitted to ERA 2015 in the research income reference period (1 January 2011 – 31 December 2013), with around 49 per cent of all research income submitted being HERDC Category 1 – Australian Competitive Grants. See **Section 4** for a detailed breakdown.

## HERDC RESEARCH INCOME BY CATEGORY

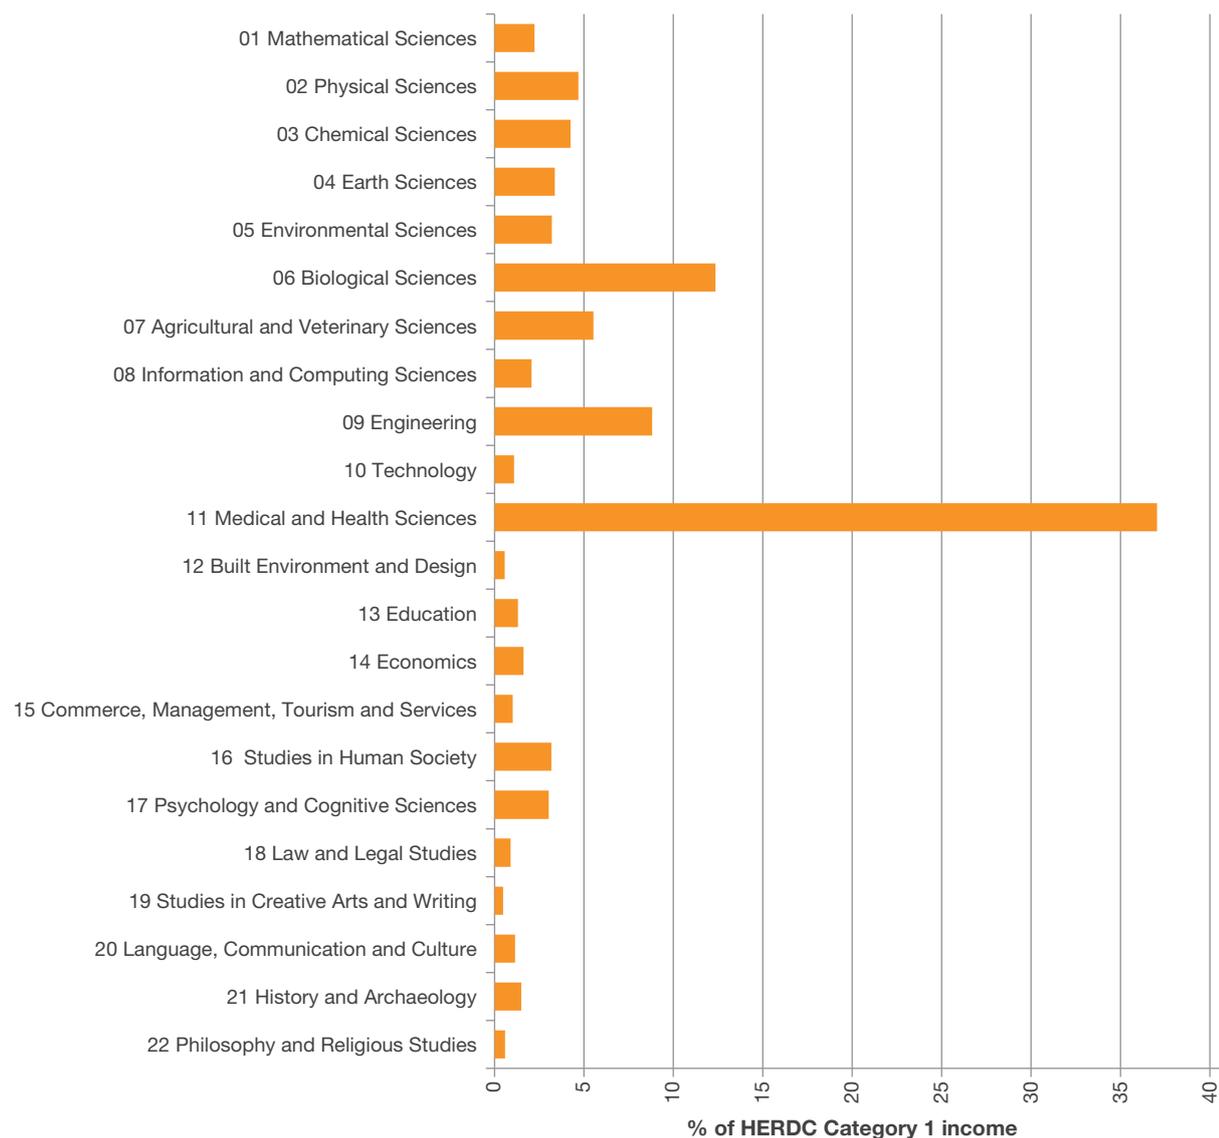

## HERDC RESEARCH INCOME (ALL CATEGORIES) BY YEAR BY TWO-DIGIT FOR CODE

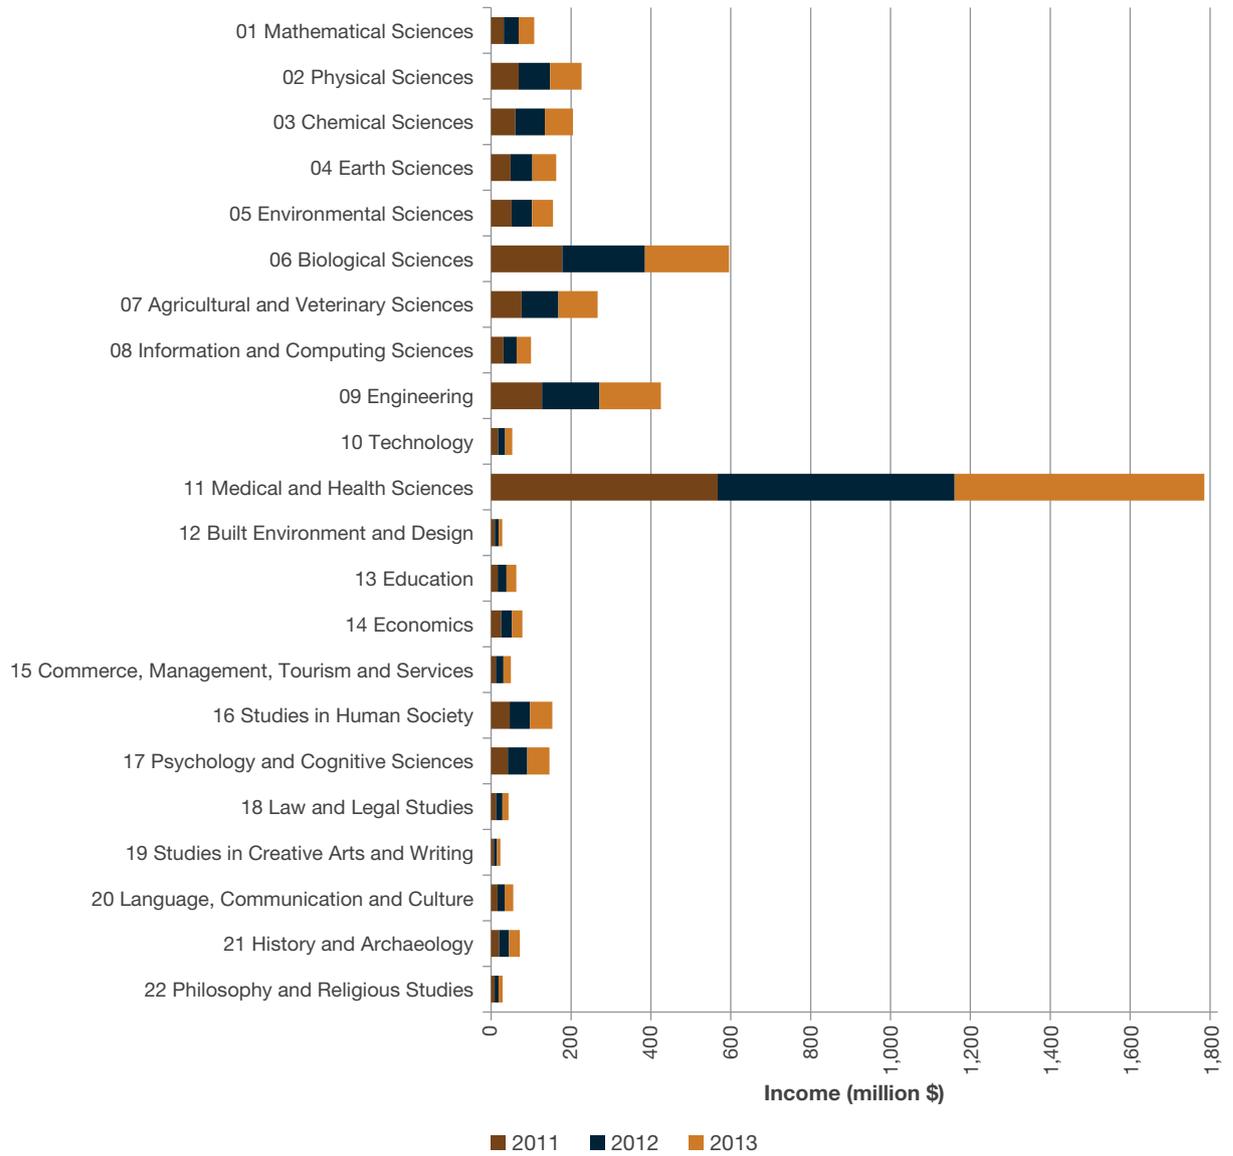

## HERDC Category 1 — Australian Competitive Grants Research Income

Over \$4.82 billion of Australian Competitive Grants research income was submitted to ERA 2015. The two-digit FoR codes with the highest percentage of HERDC Category 1 income were 11 Medical and Health Sciences (37 per cent), followed by 06 Biological Sciences (12 per cent) and 09 Engineering (9 per cent). The yearly income amounts by two-digit code are shown in the second chart (million \$). See **Section 4** for a detailed breakdown.

### HERDC CATEGORY 1 RESEARCH INCOME BY TWO-DIGIT FOR CODE

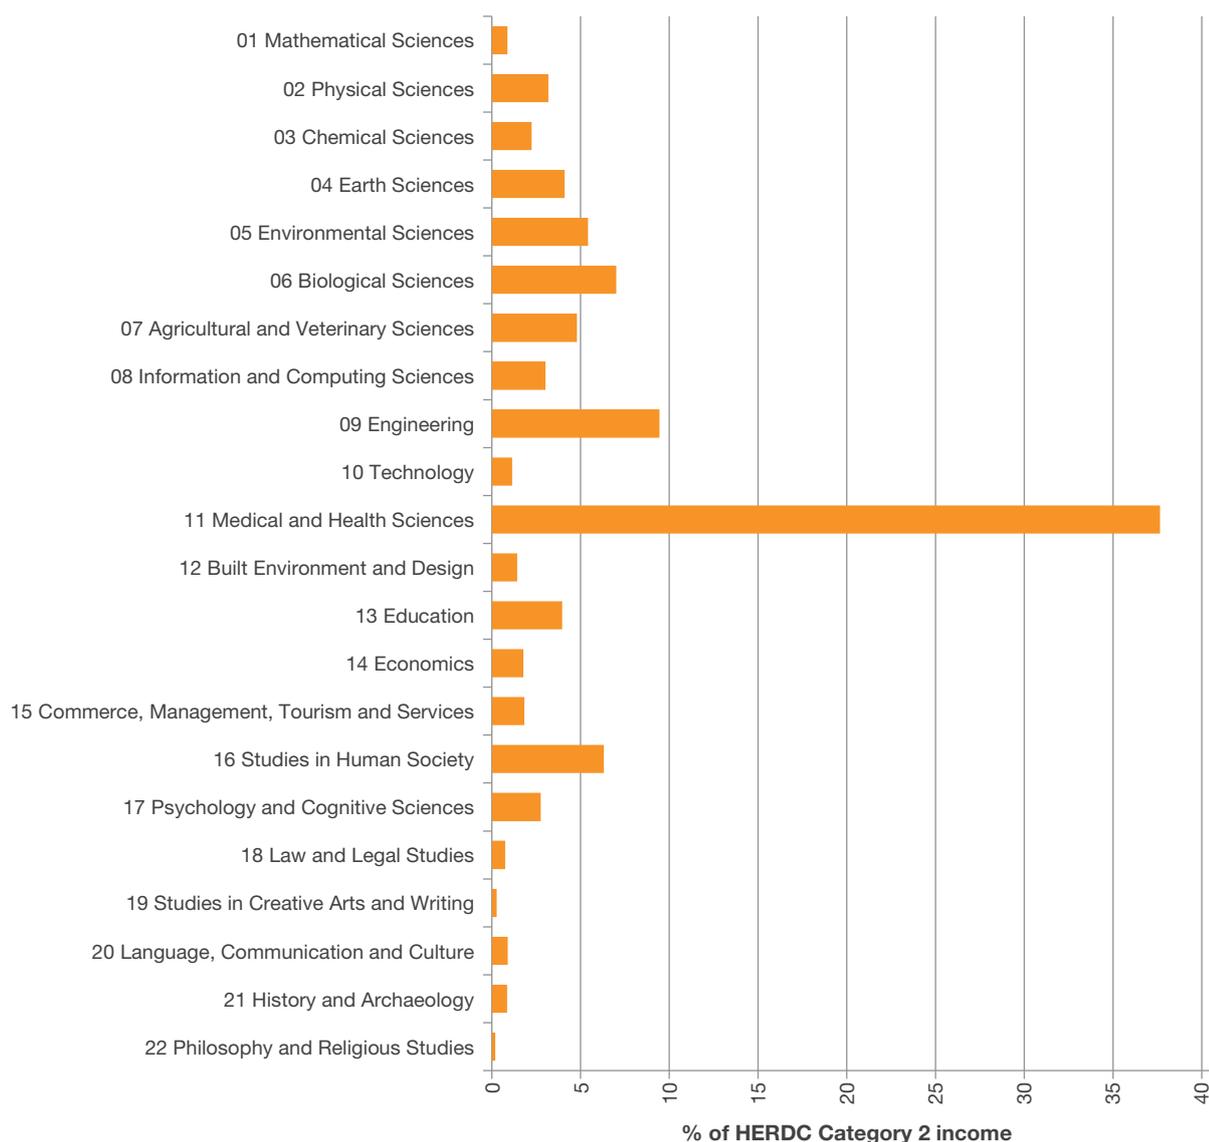

HERDC CATEGORY 1 RESEARCH INCOME BY YEAR BY TWO-DIGIT FOR CODE

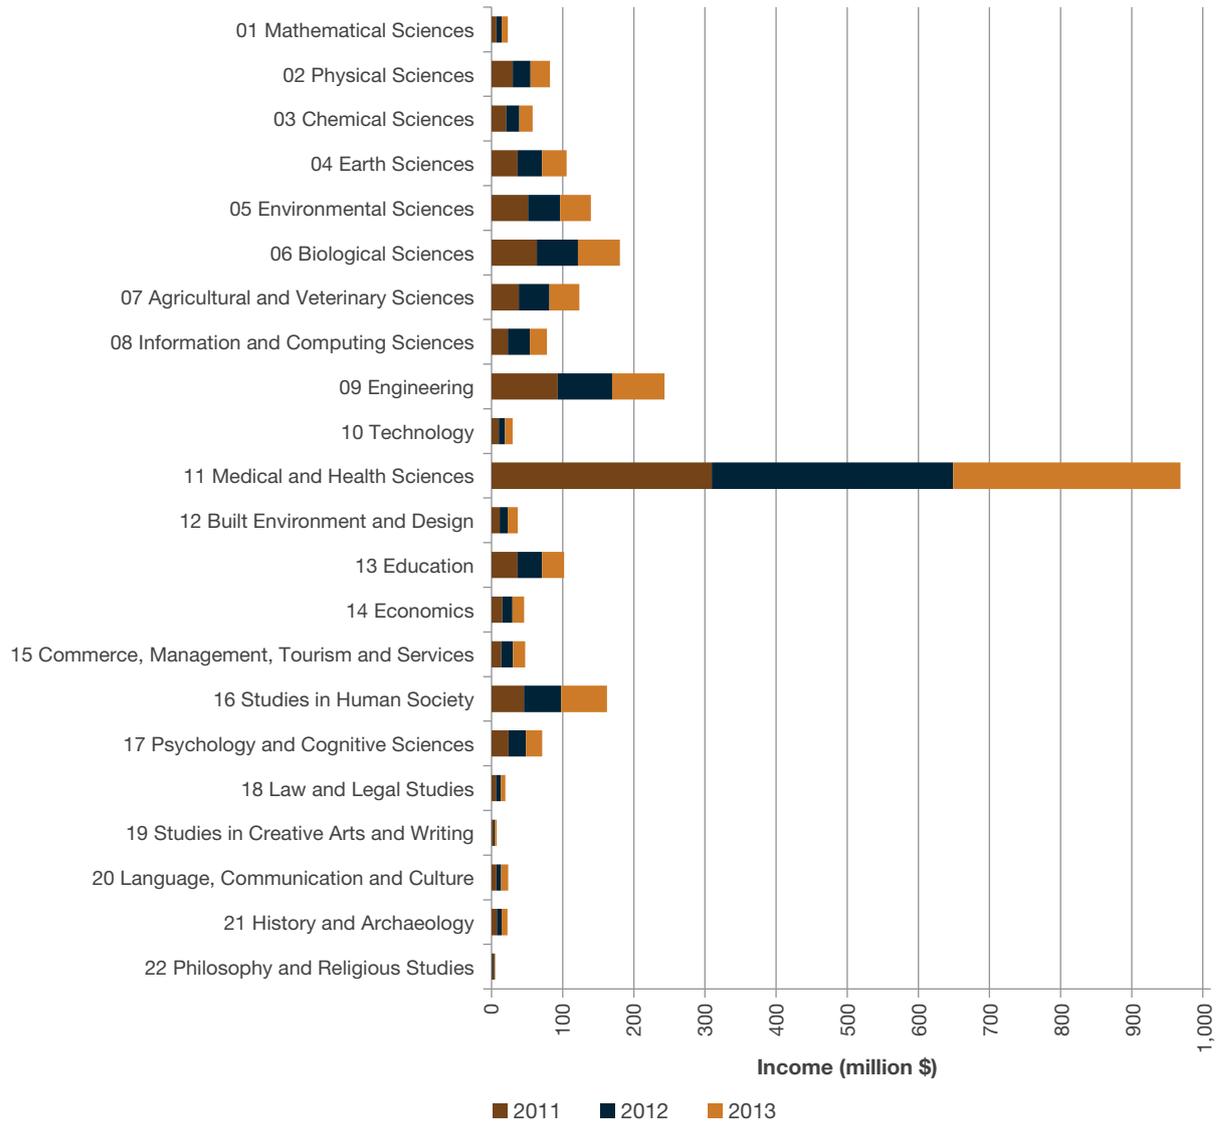

## HERDC Category 2 — Other Public Sector Research Income

Over \$2.57 billion of Other Public Sector Research Income was submitted to ERA 2015. The two-digit FoR codes with the highest percentage of HERDC Category 2 income were 11 Medical and Health Sciences (38 per cent), followed by 09 Engineering (9 per cent) and 06 Biological Sciences (7 per cent). The yearly income amounts by two-digit code are shown in the second chart (million \$). See **Section 4** for a detailed breakdown.

### HERDC CATEGORY 2 RESEARCH INCOME BY TWO-DIGIT FOR CODE

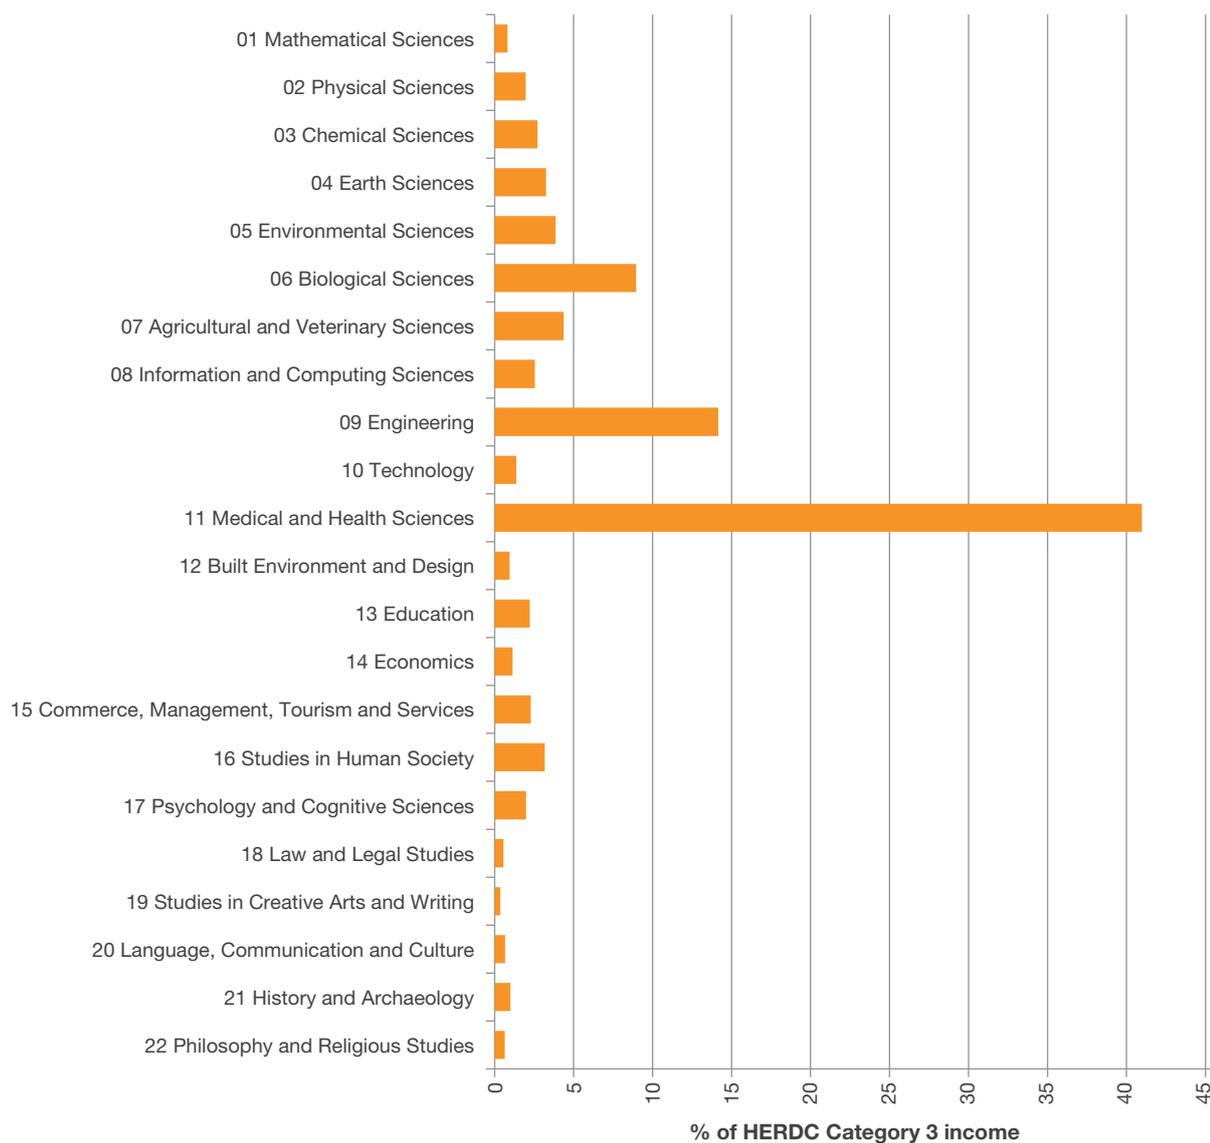

HERDC CATEGORY 2 RESEARCH INCOME BY YEAR BY TWO-DIGIT FOR CODE

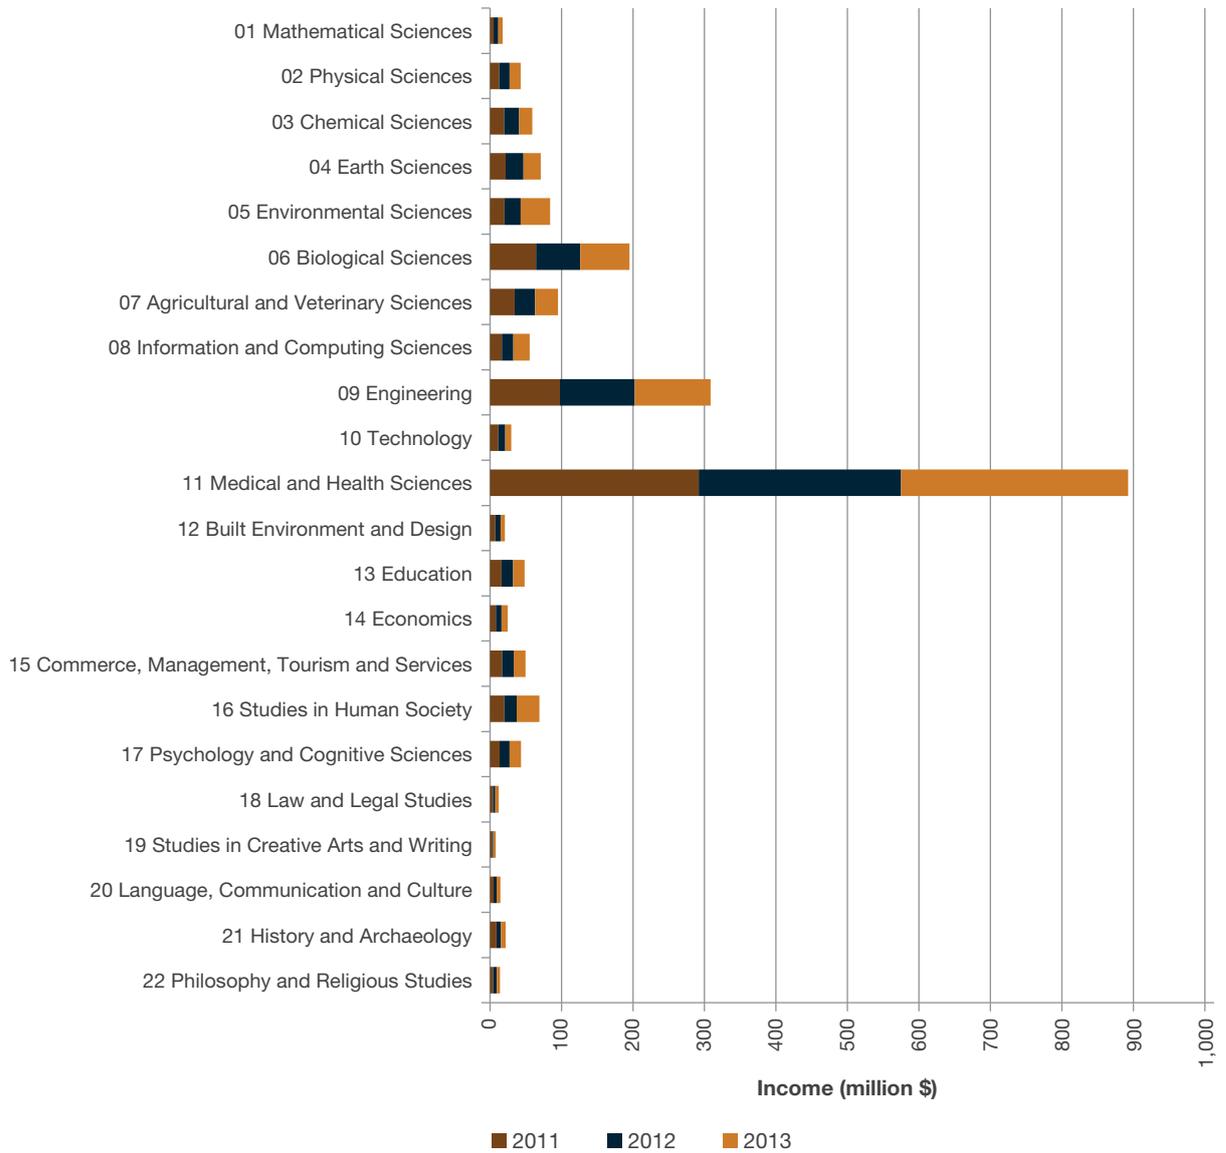

## HERDC Category 3 — Industry and Other Research Income

Over \$2.17 billion of Industry and Other Research Income was submitted to ERA 2015. The two-digit FoR codes with the highest percentage of HERDC Category 3 income were 11 Medical and Health Sciences (41 per cent), followed by 09 Engineering (14 per cent) and 06 Biological Sciences (9 per cent). The yearly income amounts by two-digit code are shown in the second chart (million \$). See **Section 4** for a detailed breakdown.

### HERDC CATEGORY 3 RESEARCH INCOME BY TWO-DIGIT FOR CODE

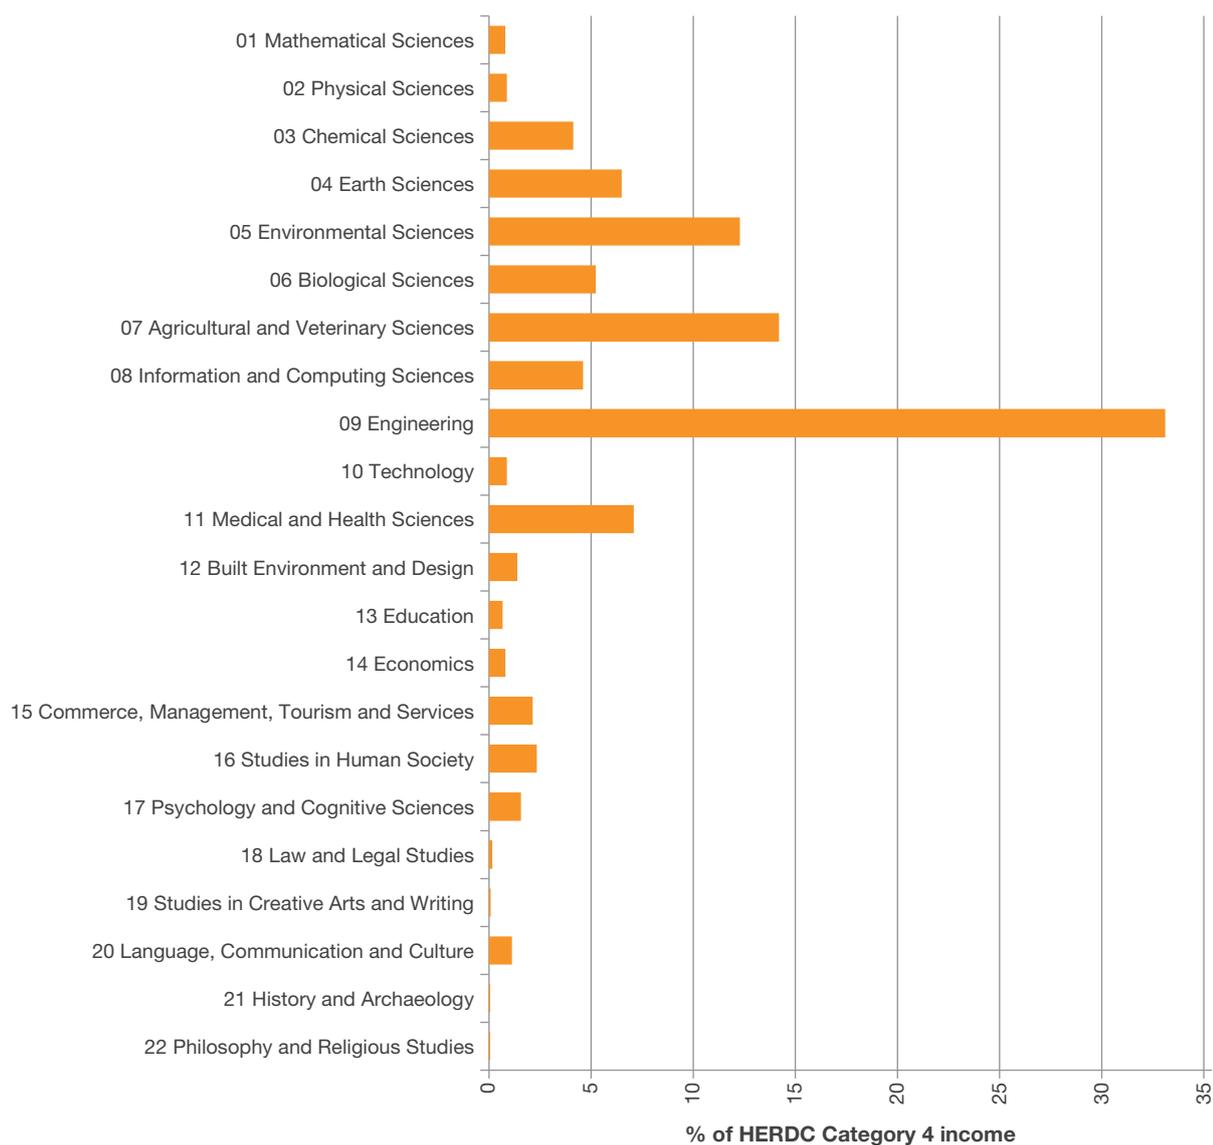

HERDC CATEGORY 3 RESEARCH INCOME BY YEAR BY TWO-DIGIT FOR CODE

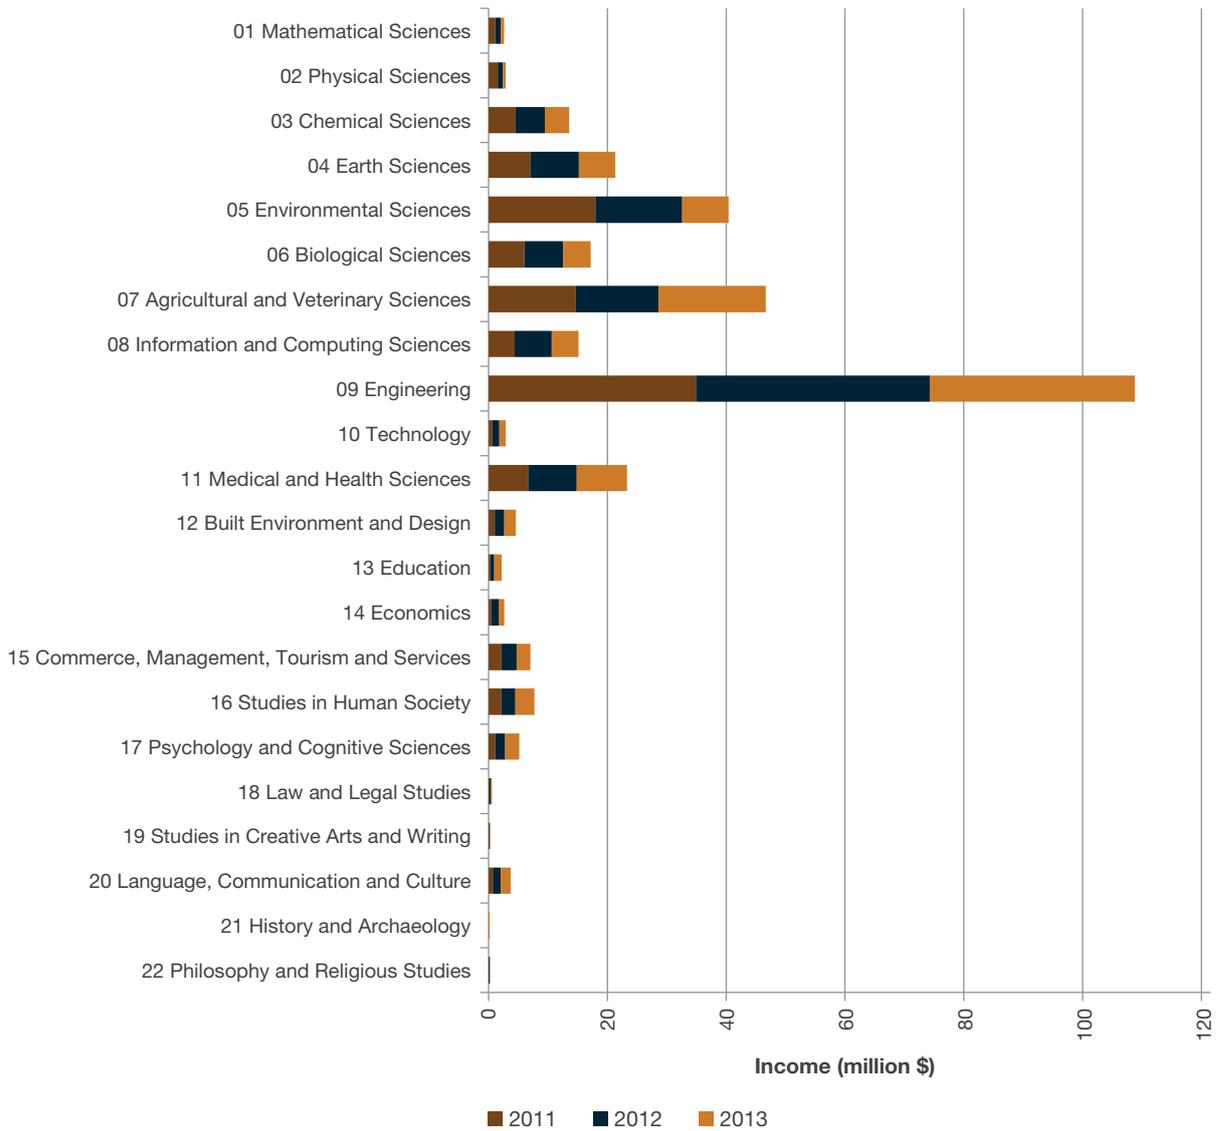

## HERDC Category 4 — CRC Research Income

Over \$328 million of Cooperative Research Centre (CRC) income was submitted to ERA 2015. The two-digit FoR codes with the highest percentage of HERDC Category 4 income were 09 Engineering (33 per cent), followed by 07 Agricultural and Veterinary Sciences (14 per cent) and 05 Environmental Sciences (12 per cent). The yearly income amounts by two-digit code are shown in the second chart (million \$). See **Section 4** for a detailed breakdown.

### HERDC CATEGORY 4 RESEARCH INCOME BY TWO-DIGIT FOR CODE

HERDC CATEGORY 4 RESEARCH INCOME BY YEAR BY TWO-DIGIT FOR CODE

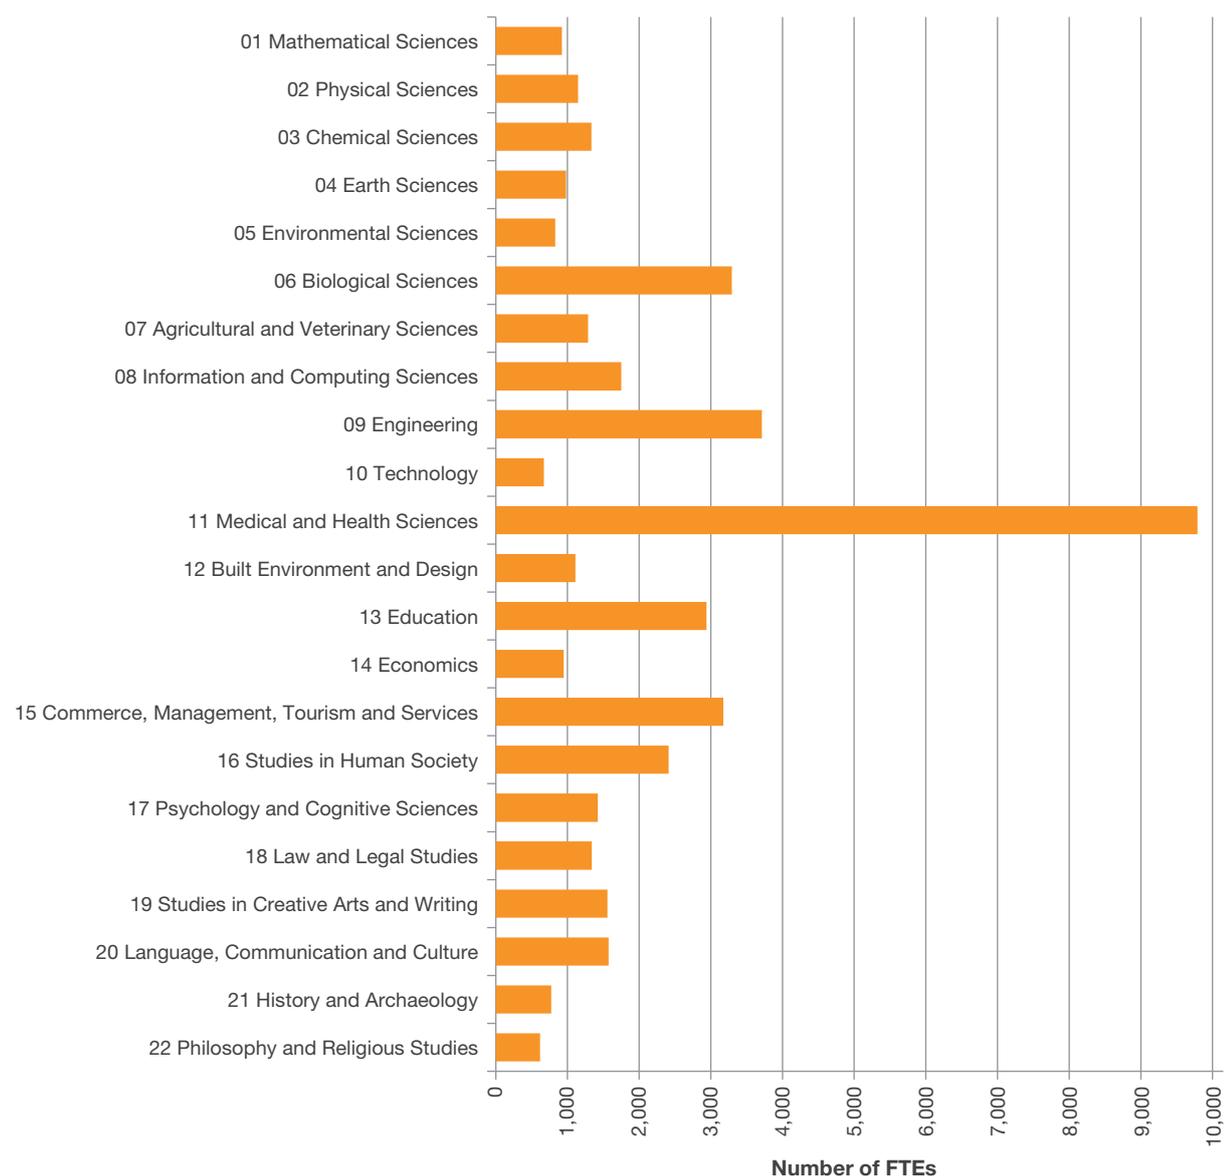

## FTE Staffing Profile

Over 43,000 eligible FTE staff (over 47,000 actual individuals) were submitted to ERA 2015. Level B staff had the highest number of FTE staff by level. The two-digit FoR codes with the largest number of FTE staff was 11 Medical and Health Sciences, followed by 09 Engineering, 06 Biological Sciences and 15 Commerce, Management, Tourism and Services. See **Section 4** for a detailed breakdown.

### HESDC LEVEL BY FTE AND HEADCOUNT

HESDC	FTE	% FTE	FTE Headcount	% FTE Headcount
Level E	6,142.6	14.1	6,649.0	14.0
Level D	5,298.4	12.2	5,615.0	11.8
Level C	9,567.7	22.0	10,226.0	21.6
Level B	12,657.1	29.0	13,795.0	29.1
Level A	6,081.3	14.0	6,784.0	14.3
Other	3,834.6	8.8	4,332.0	9.1
<b>Total</b>	<b>43,581.8</b>	<b>100.0</b>	<b>47,401.0</b>	<b>100.0</b>

### STAFFING PROFILE BY FTE BY TWO-DIGIT FOR CODE

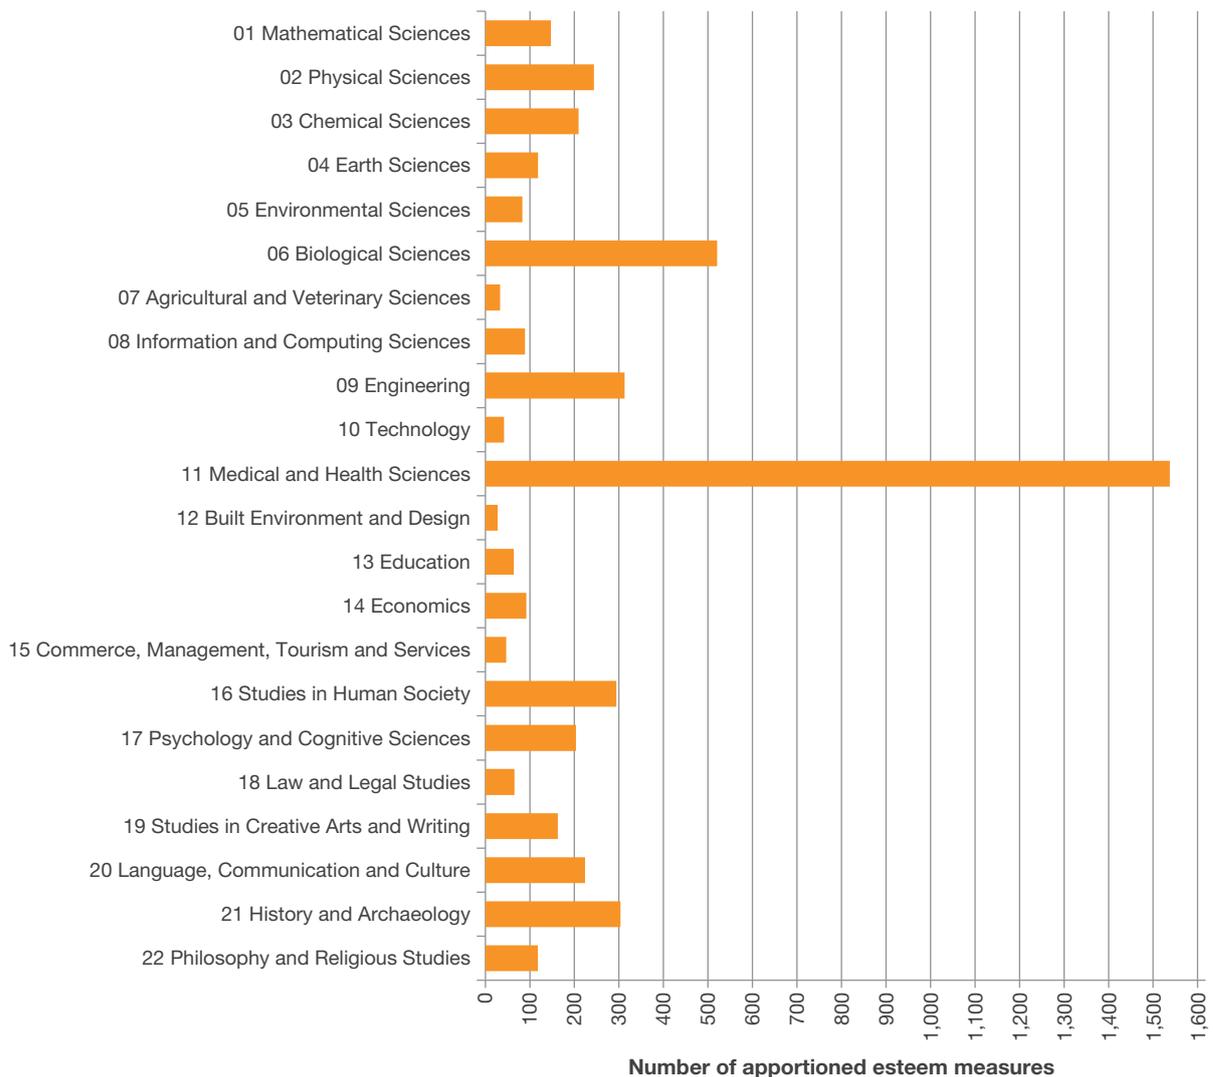

# Esteem Measures

Esteem measures eligible for ERA 2015 embody a measure of prestige and are recognised by experts within the discipline as a highly desired, highly regarded form of accolade or acknowledgment. Almost two-thirds of apportioned esteem measures were Recipients of a Nationally Competitive Research Fellowship (Category 1), while Membership of a Learned Academy or Membership of AIATSIS accounted for most of the remaining total amount of esteem measures. The two-digit codes which had the highest total number of apportioned esteem measures were 11 Medical and Health Sciences and 06 Biological Sciences. See **Section 4** for a detailed breakdown.

## APPORTIONED ESTEEM MEASURES BY TYPE

## APPORTIONED ESTEEM MEASURES BY TWO-DIGIT FOR CODE

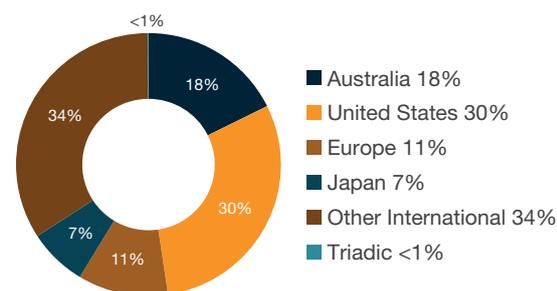

# Patents Granted

Eligible patents for ERA 2015 include Australian standard patents and their international equivalents, but not Australian innovation patents. ‘Other International’ includes all other countries not listed in the table below. Triadic patents are a series of corresponding patents filed at the European Patent Office (EPO), the United States Patent and Trademark Office (USPTO) and the Japan Patent Office (JPO), for the same invention by the same applicant or inventor. A total of 936 patents were submitted to ERA 2015. Over a third were submitted in the category of ‘Other International’. See **Section 4** for a detailed breakdown.

## NUMBER OF PATENTS GRANTED BY COUNTRY

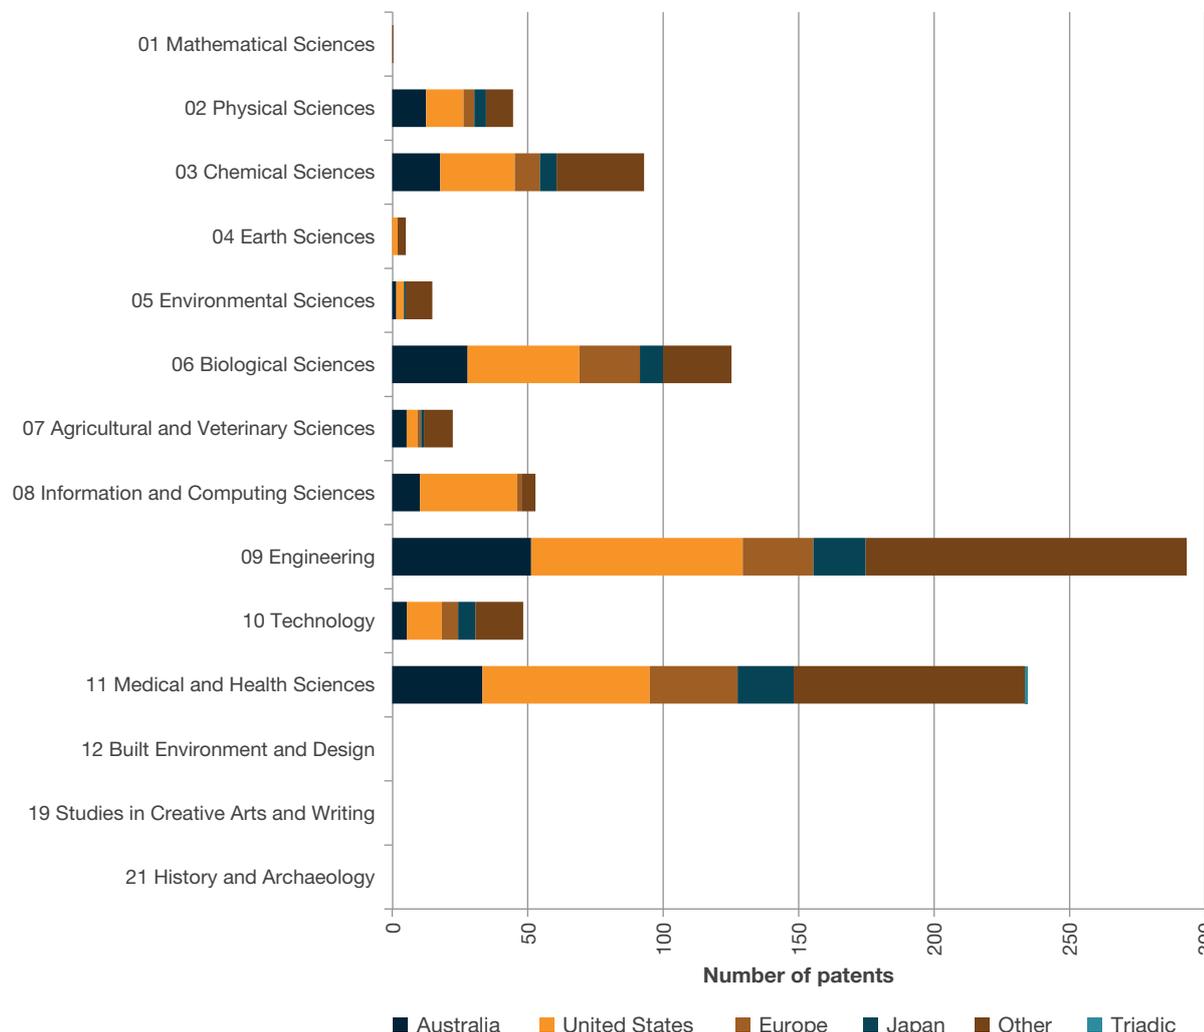

Country or Type	Patents Granted
Australia	165.0
United States	280.0
Europe	103.0
Japan	67.0
Other International	318.0
Triadic	1.0
<b>Total*</b>	<b>936.0</b>

## PATENTS GRANTED BY COUNTRY (%)

\* Note: Triadic patents count as three patents in the Total

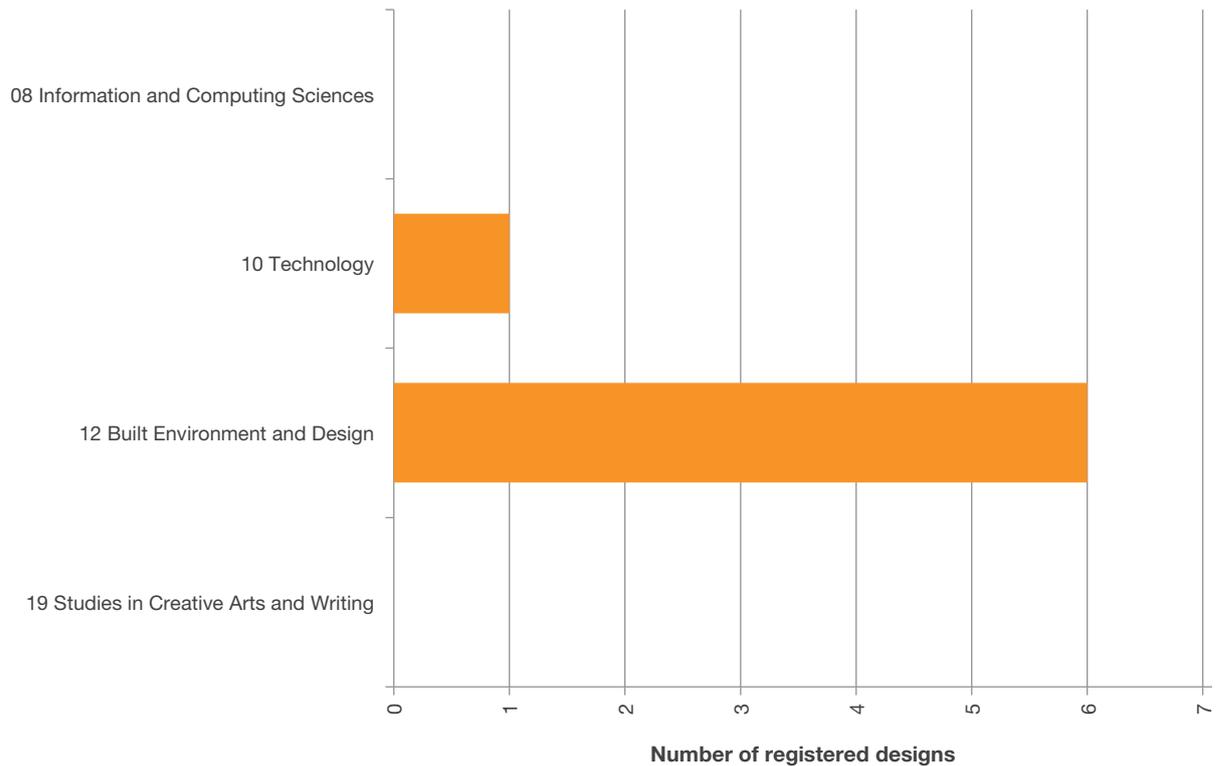

## PATENTS GRANTED BY TWO-DIGIT FOR CODE

## Registered Designs

Registered designs were required to demonstrate a clear link between the registered design and the related research to be eligible for submission to ERA 2015. Only those registered designs which were certified in Australia were eligible for submission. There were seven registered designs submitted to ERA 2015, six in 12 Built Environment and Design and one in 10 Technology. See **Section 4** for a detailed breakdown.

### REGISTERED DESIGNS BY TWO-DIGIT FOR CODE

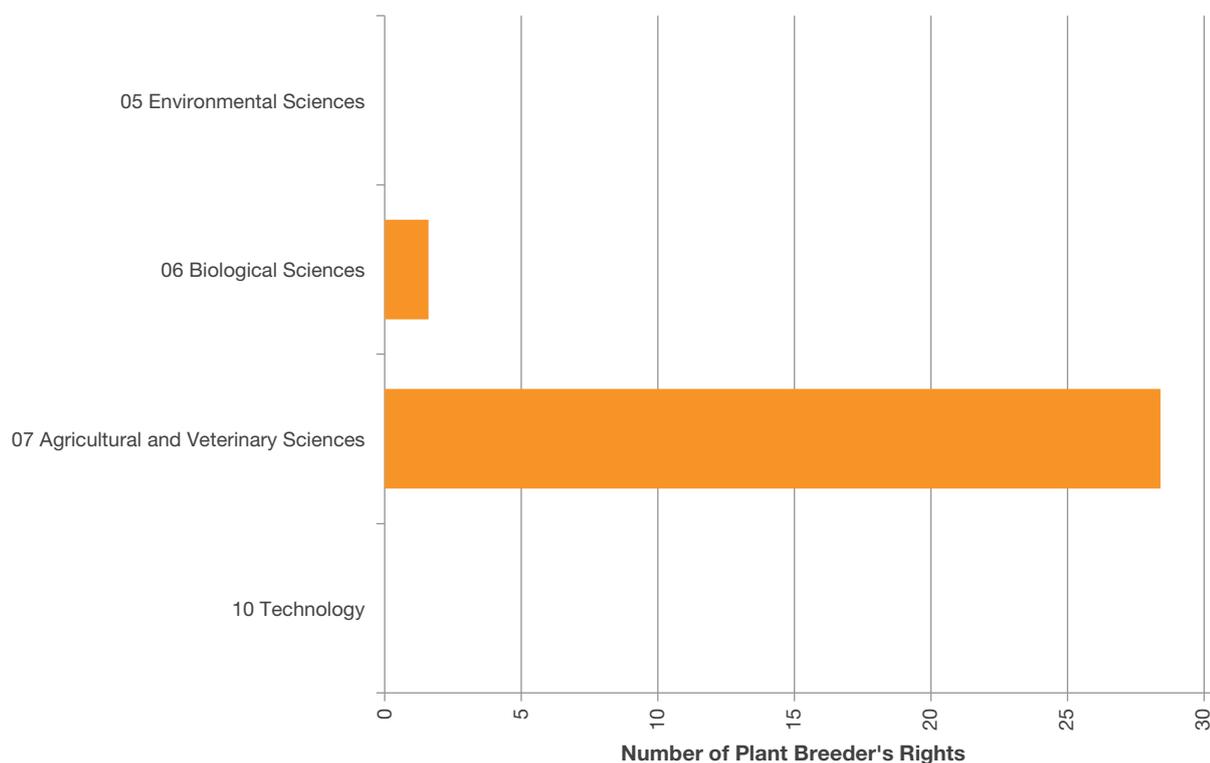

*Note: Two-digit FoR codes that do not use registered designs as an applied measure are not shown in the bar chart. See **Section 4** for a detailed breakdown.*

## Plant Breeder's Rights

Eligible Plant Breeder's Rights for ERA 2015 are those granted under the *Plant Breeder's Rights Act 1994* (Cth) or their international equivalents. Provisional protection Plant Breeder's Rights were ineligible for submission. A total of 30 Plant Breeder's Rights were submitted to ERA 2015, 28.4 were apportioned to 07 Agricultural and Veterinary Sciences and 1.6 were apportioned to 06 Biological Sciences. See **Section 4** for a detailed breakdown.

### PLANT BREEDER'S RIGHTS BY TWO-DIGIT FOR CODE

Note: Two-digit FoR codes that do not use Plant Breeder's Rights as an applied measure are not shown in the bar chart. See **Section 4** for a detailed breakdown.

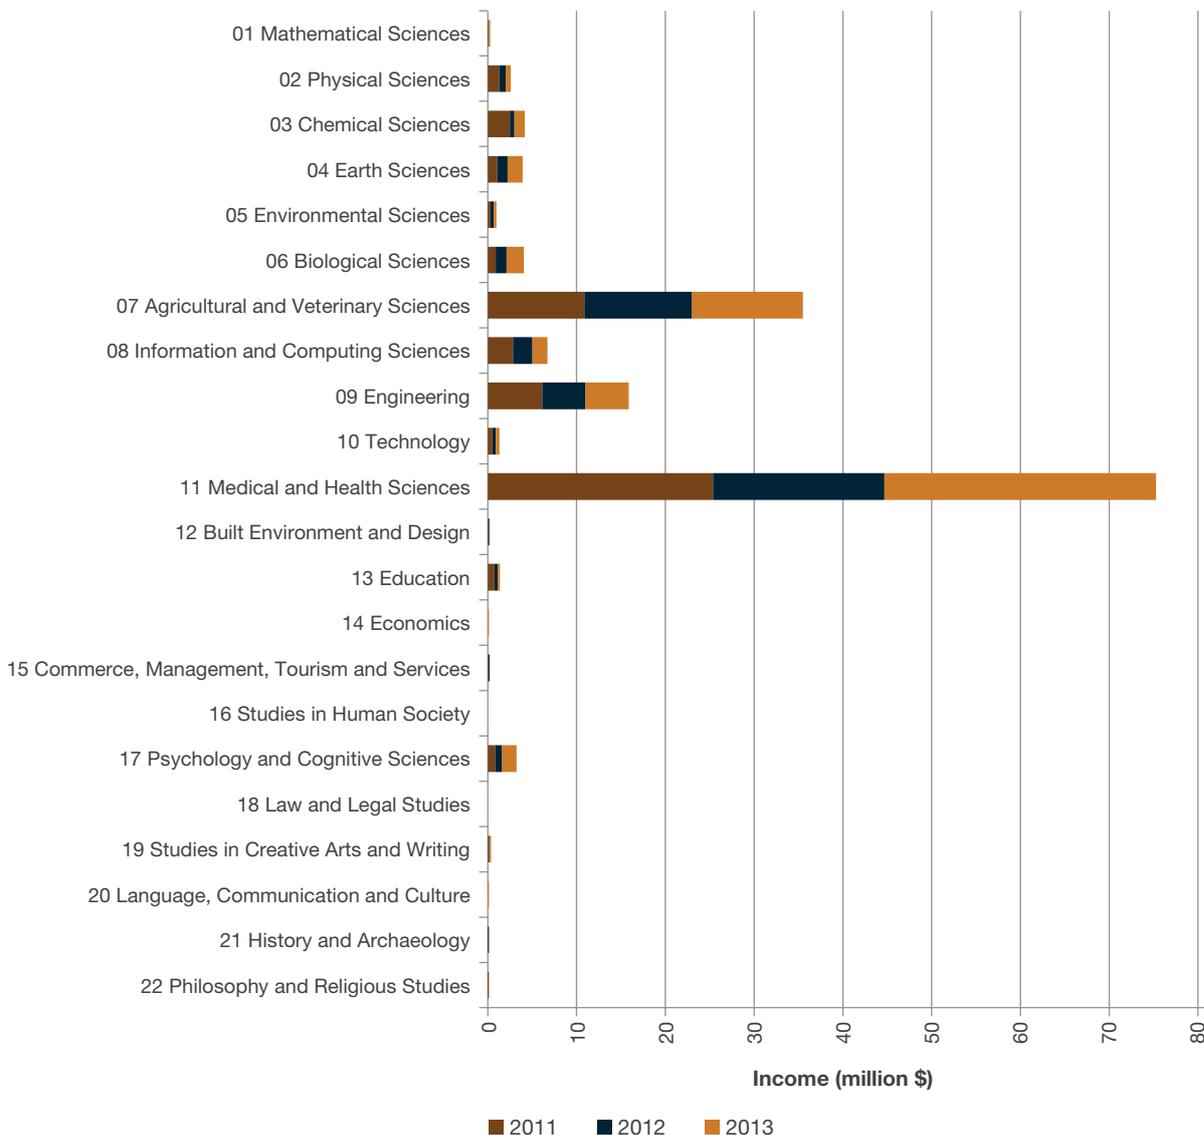

## National Health and Medical Research Council (NHMRC) Endorsed Guidelines

NHMRC Endorsed Guidelines include those on population health, clinical practice and ethics. This indicator was applicable to the two-digit and four-digit Medical and Health Sciences FoR codes. A total of 64 NHMRC Endorsed Guidelines were submitted to ERA 2015. See **Section 4** for a detailed breakdown.

## Research Commercialisation Income

A total of \$155 million of research commercialisation income was submitted to ERA 2015. The two-digit FoR codes with the largest amount of research commercialisation income were 11 Medical and Health Sciences followed by 07 Agricultural and Veterinary Sciences. See **Section 4** for a detailed breakdown.

### RESEARCH COMMERCIALISATION INCOME BY YEAR BY TWO-DIGIT FOR CODE

Note: Two- and four-digit FoR codes for Law and Legal Studies (18) do not use research commercialisation income as an applied measure nor do some underlying four-digit codes in Medical and Health Sciences (11). See **Section 4** for more detail.

01 Mathematical Sciences	104

**SECTION 3**

# Results by Fields of Research Code

12 Built Environment and Design	196
13 Education	202
14 Economics	207
15 Commerce, Management, Tourism and Services	212
16 Studies in Human Society	220
17 Psychology and Cognitive Sciences	227
18 Law and Legal Studies	231
19 Studies in Creative Arts and Writing	235
20 Language, Communication and Culture	242
21 History and Archaeology	249
22 Philosophy and Religious Studies	254

**Section 3** provides a summary of ERA 2015 results and activity by aggregated four-digit FoR code.

The four-digit codes that sit within each two-digit FoR are listed at the beginning of each discipline in this section.

Comparative information is presented for each discipline at the four-digit level and includes:

- › Fields of Research overview with the aggregated four-digit data for each ERA indicator
- › the distribution table and chart showing the number of UoEs per rating scale score (including the two- and four-digit ratings for that FoR)
- › research outputs submitted by type (chart and table)
- › research income by year—all categories (\$) (chart and table)
- › staffing profile by academic level (chart and table)
- › patent profile (where applicable) (table only)
- › research commercialisation income by year (\$) (chart and table)

Following these summary charts, an overview table for each individual four-digit FoR code is presented as well as doughnut charts showing the distribution of output types and the number of UoEs by rating for that four-digit code.

*Notes:*

- › Where an indicator does not apply to a particular discipline ‘–’ is shown. A ‘0’ represents that the indicator applies to the discipline, but no data was submitted.
- › Percentages <1 not shown on doughnut charts for research outputs by type.
- › Totals in the doughnut charts may not sum to 100% due to rounding.

# 01 MATHEMATICAL SCIENCES

Mathematical Sciences is comprised of the following four-digit codes:

- 0101 Pure Mathematics**
- 0102 Applied Mathematics**
- 0103 Numerical and Computational Mathematics**
- 0104 Statistics**
- 0105 Mathematical Physics**
- 0199 Other Mathematical Sciences**

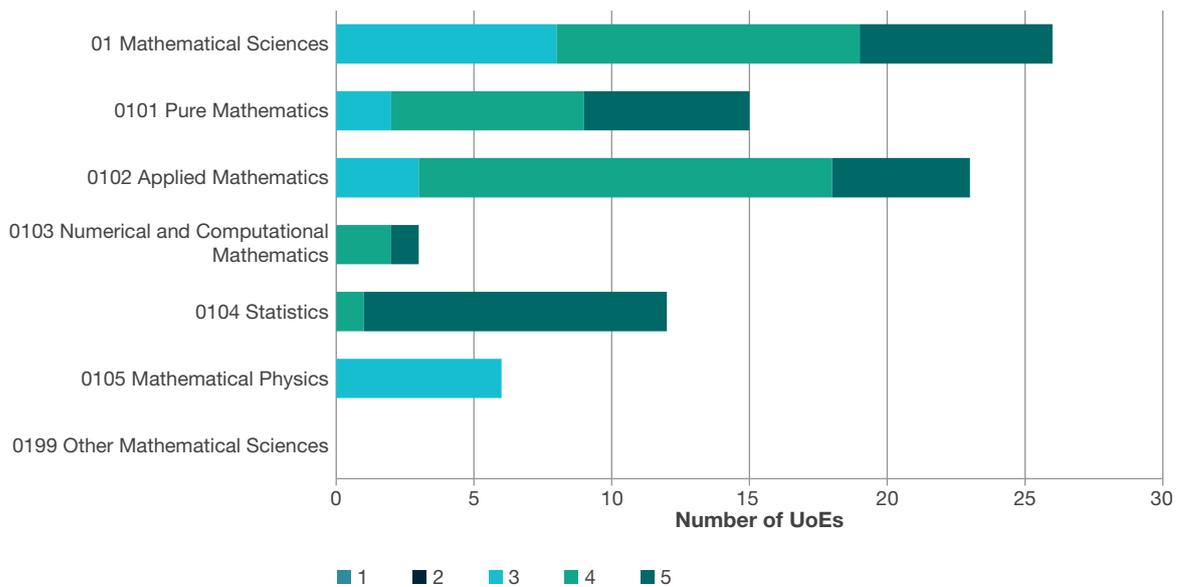

**18 out of 26 two-digit UoEs  
and 48 out of 59 four-digit  
UoEs assessed were rated  
above world standard**

## FoR Overview

Mathematical Sciences (01) accounted for approximately two per cent of the research outputs submitted to ERA 2015. The most common research output type in Mathematical Sciences was journal articles. The staffing profile showed similar staffing levels and spread for Pure Mathematics (0101) and Applied Mathematics (0102) for academic levels B–E. These two four-digit codes showed the highest number of research outputs and research income. Research commercialisation income was particularly strong in Applied Mathematics (0102).

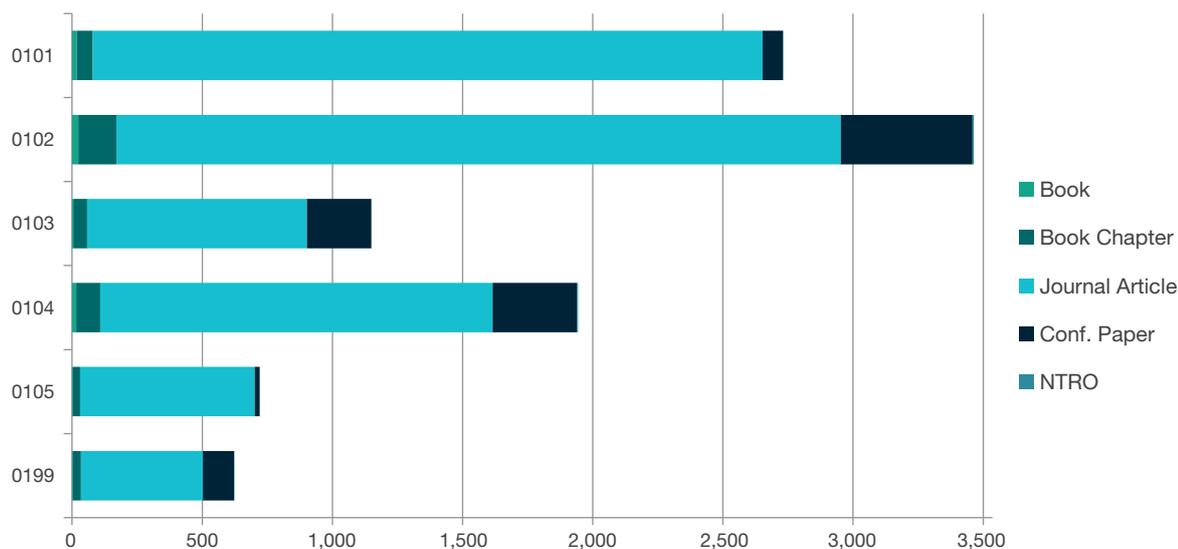

Indicator	No.	Rating	Distribution	
			Two-digit	Four-digit
Research outputs	10,632.6	5	7	23
Research income	\$150,725,932	4	11	25
FTEs	922.6	3	8	11
Esteem count	147.2	2	0	0
Patents	0.2	1	0	0
Research commercialisation income	\$162,956	<b>Total</b>	<b>26</b>	<b>59</b>

### NUMBER OF UOES PER RATING SCALE SCORE

# 02 PHYSICAL SCIENCES

Physical Sciences is comprised of the following four-digit codes:

- 0201 Astronomical and Space Sciences**
- 0202 Atomic, Molecular, Nuclear, Particle and Plasma Physics**
- 0203 Classical Physics**
- 0204 Condensed Matter Physics**
- 0205 Optical Physics**
- 0206 Quantum Physics**
- 0299 Other Physical Sciences**

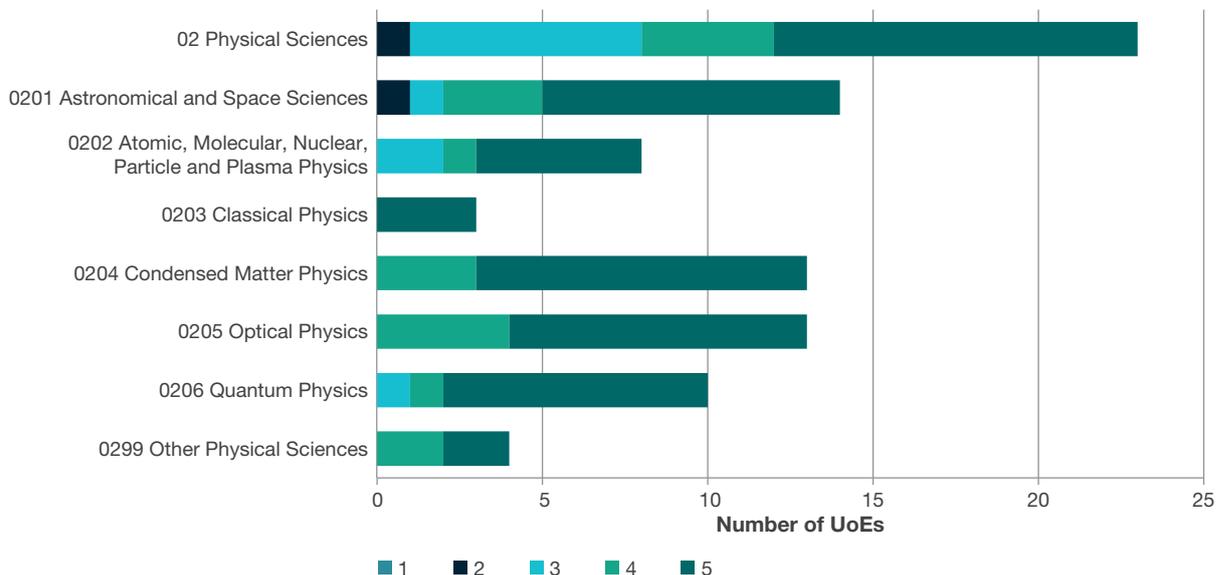

**15 out of 23**  
two-digit UoEs and  
**60 out of 65**  
four-digit UoEs  
assessed were  
rated above  
world standard

## FoR Overview

Physical Sciences (02) accounted for approximately four per cent of the research outputs submitted to ERA 2015. The majority of Physical Sciences outputs were journal articles (84 per cent), while 15 per cent of the research outputs were conference papers. Astronomical and Space Sciences (0201) had the highest number of research outputs, research income levels, number of staff, and research commercialisation income. Optical Physics (0205) was the next highest four-digit code for these indicators, and in addition, almost half of the patents submitted in Physical Sciences were assigned to Optical Physics (0205).

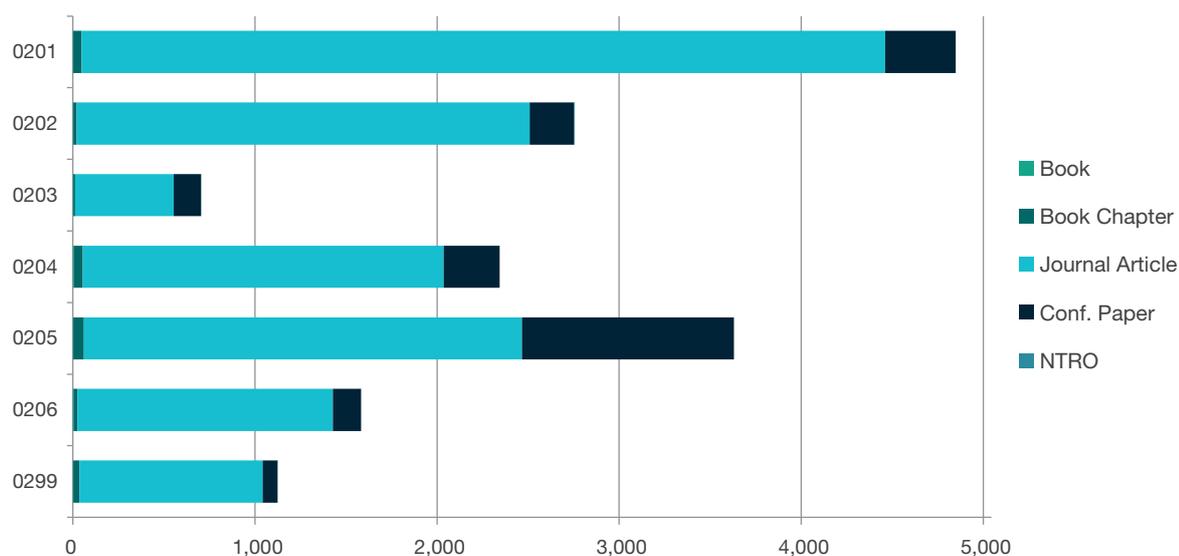

Indicator	No.	Rating	Distribution	
			Two-digit	Four-digit

# 03 CHEMICAL SCIENCES

Chemical Sciences is comprised of the following four-digit codes:

**0301 Analytical Chemistry**

**0302 Inorganic Chemistry**

**0303 Macromolecular and Materials Chemistry**

**0304 Medicinal and Biomolecular Chemistry**

**0305 Organic Chemistry**

**0306 Physical Chemistry (Incl. Structural)**

**0307 Theoretical and Computational Chemistry**

**0399 Other Chemical Sciences**

**19 out of 26 two-digit UoEs and 79 out of 94 four-digit UoEs assessed were rated above world standard**

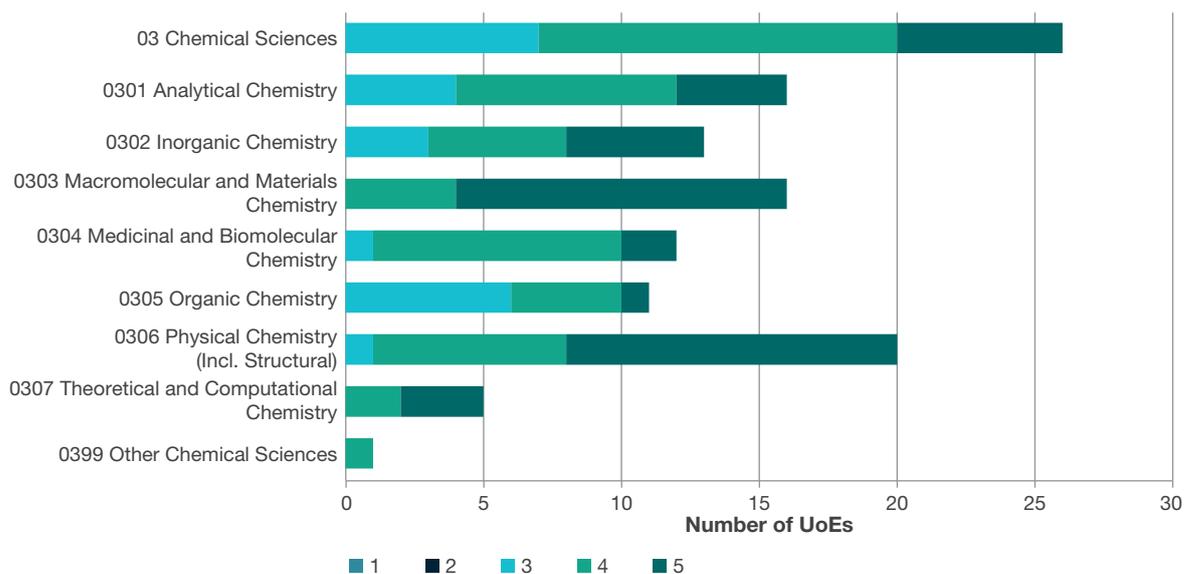

## FoR Overview

Chemical Sciences (03) accounted for approximately four per cent of research outputs submitted to ERA 2015. Journal articles were the predominant research output type. Almost 10 per cent of the patents submitted to ERA 2015 were assigned to the Chemical Sciences. Medicinal and Biomolecular Chemistry (0304) and Physical Chemistry (Incl. Structural) (0306) showed the highest staffing levels and research income. Theoretical and Computational Chemistry (0307) contributed the most research commercialisation income.

# 04 EARTH SCIENCES

Earth Sciences is comprised of the following four-digit codes:

**0401 Atmospheric Sciences**

**0402 Geochemistry**

**0403 Geology**

**0404 Geophysics**

**0405 Oceanography**

**0406 Physical Geography and Environmental Geoscience**

**0499 Other Earth Sciences**

15 out of 20 two-digit UoEs and 54 out of 62 four-digit UoEs assessed were rated above world standard

## FoR Overview

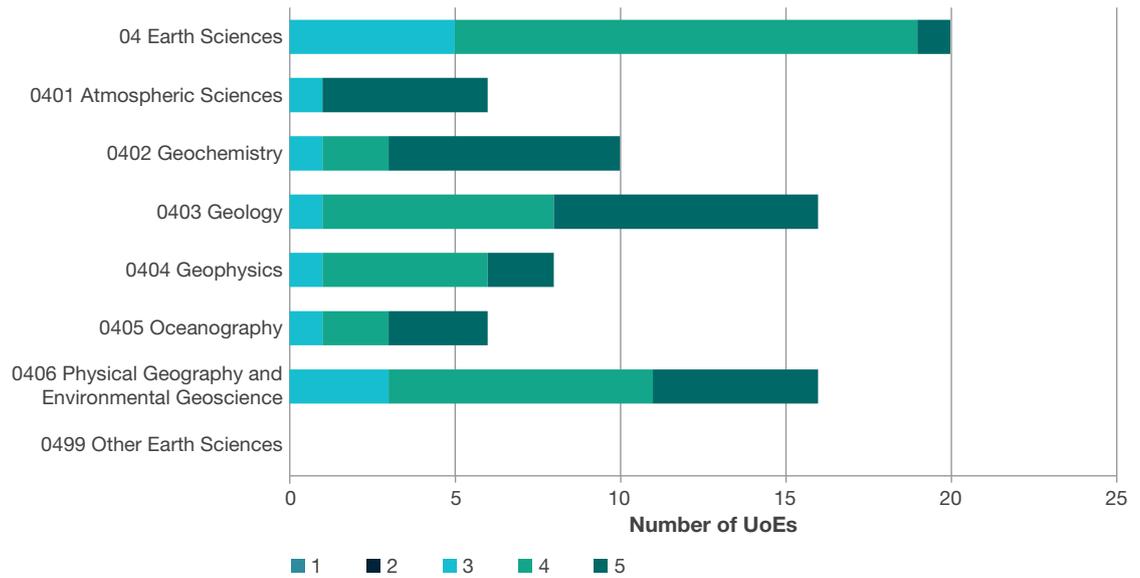

Earth Sciences (04) accounted for approximately three per cent of the research outputs submitted to ERA 2015.

Journal articles were the most common research output type in Earth Sciences. Geology (0403) had the highest number of research outputs, staffing levels and highest research income levels. Geochemistry (0402) had the highest research commercialisation income.

# 05 ENVIRONMENTAL SCIENCES

Environmental Sciences is comprised of the following four-digit codes:

- 0501 Ecological Applications**
- 0502 Environmental Science and Management**
- 0503 Soil Sciences**
- 0599 Other Environmental Sciences**

**26 out of 34 two-digit UoEs and 49 out of 53 four-digit UoEs assessed were rated above world standard**

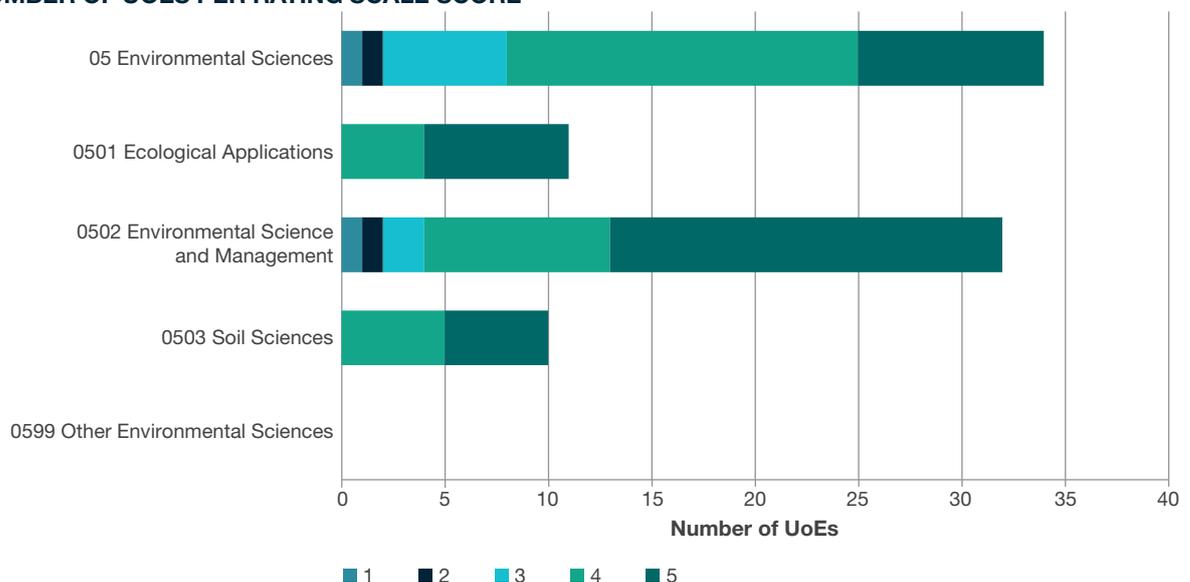

## FoR Overview

Environmental Sciences (05) accounted for approximately two per cent of the research outputs submitted to ERA 2015. Journal articles comprised 74 per cent of the total research outputs submitted to Environmental Sciences, followed by book chapters (11 per cent). Environmental Science and Management (0502) is the largest sub-discipline in terms of research outputs, staffing levels, research income and research commercialisation income. Approximately two per cent of the patents submitted to ERA 2015 were in Environmental Sciences (05).

# 06 BIOLOGICAL SCIENCES

Biological Sciences is comprised of the following four-digit codes:

**0601 Biochemistry and Cell Biology**

**0602 Ecology**

**0603 Evolutionary Biology**

**0604 Genetics**

**0605 Microbiology**

**0606 Physiology**

**0607 Plant Biology**

**0608 Zoology**

**0699 Other Biological Sciences**

**19 out of 33 two-digit UoEs and  
101 out of 137 four-digit UoEs assessed  
were rated above world standard**

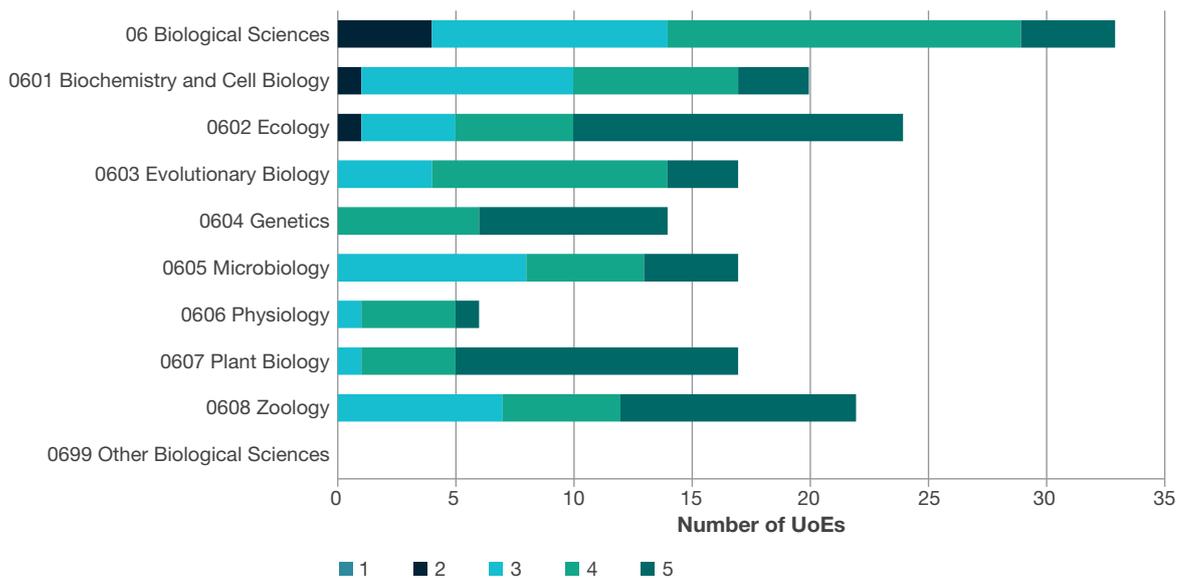

## FoR Overview

Biological Sciences (06) accounted for approximately seven per cent of the research outputs submitted to ERA 2015 and approximately 13 per cent of all patents. The majority of the Biological Sciences research outputs were journal articles (93 per cent). Biochemistry and Cell Biology (0601) was the largest sub-discipline in terms of research outputs, staffing, research income and patents. Plant Biology (0607) had the highest amount of research commercialisation income.

Indicator	No.

# 07 AGRICULTURAL AND VETERINARY SCIENCES

Agricultural and Veterinary Sciences is comprised of the following four-digit codes:

**0701 Agriculture, Land and Farm Management**

**0702 Animal Production**

**0703 Crop and Pasture Production**

**0704 Fisheries Sciences**

**0705 Forestry Sciences**

**0706 Horticultural Production**

**0707 Veterinary Sciences**

**0799 Other Agricultural and Veterinary Sciences**

**17 out of 24 two-digit UoEs and  
40 out of 55 four-digit UoEs  
assessed were rated above  
world standard**

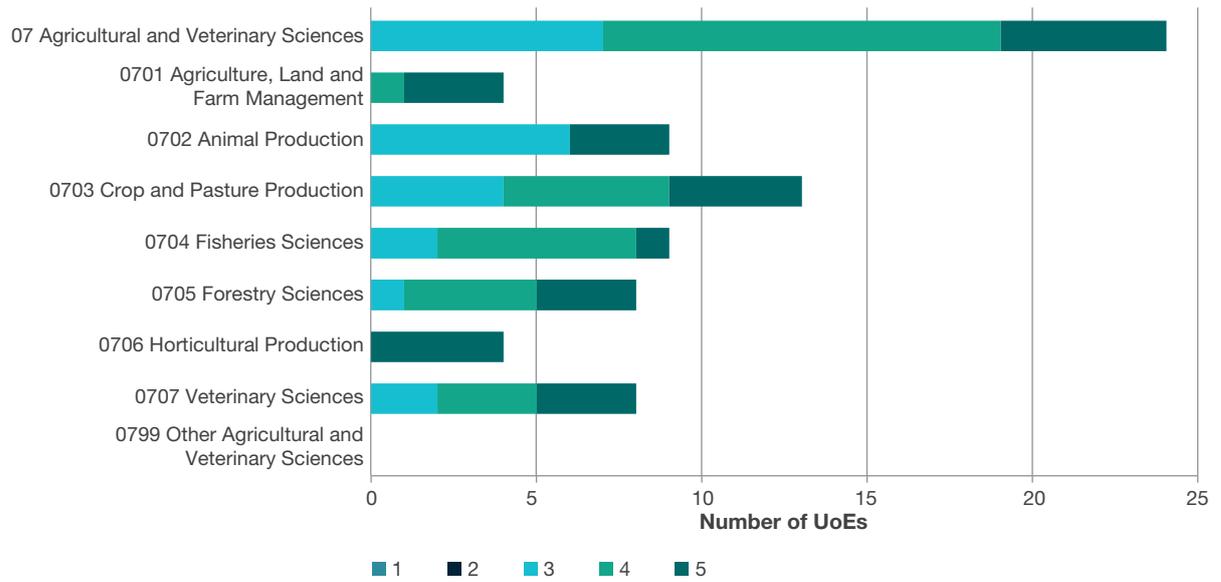

## FoR Overview

Agricultural and Veterinary Sciences (07) accounted for approximately three per cent of the research outputs submitted to ERA 2015. While most of the Agricultural and Veterinary Sciences research outputs were journal articles (82 per cent), there was a significant proportion of conference papers (12 per cent). Crop and Pasture Production (0703) was the largest sub-discipline in terms of research outputs and research income. Veterinary Sciences (0707) had the highest number of staff, while Animal Production (0702) had the highest research commercialisation income.

# 08 INFORMATION AND COMPUTING SCIENCES

Information and Computing Sciences is comprised of the following four-digit codes:

**0801 Artificial Intelligence and Image Processing**

**0802 Computation Theory and Mathematics**

**0803 Computer Software**

**0804 Data Format**

**0805 Distributed Computing**

**0806 Information Systems**

**0807 Library and Information Studies**

**0899 Other Information and Computing Sciences**

**9 out of 34 two-digit UoEs and  
45 out of 93 four-digit UoEs  
assessed were rated above  
world standard**

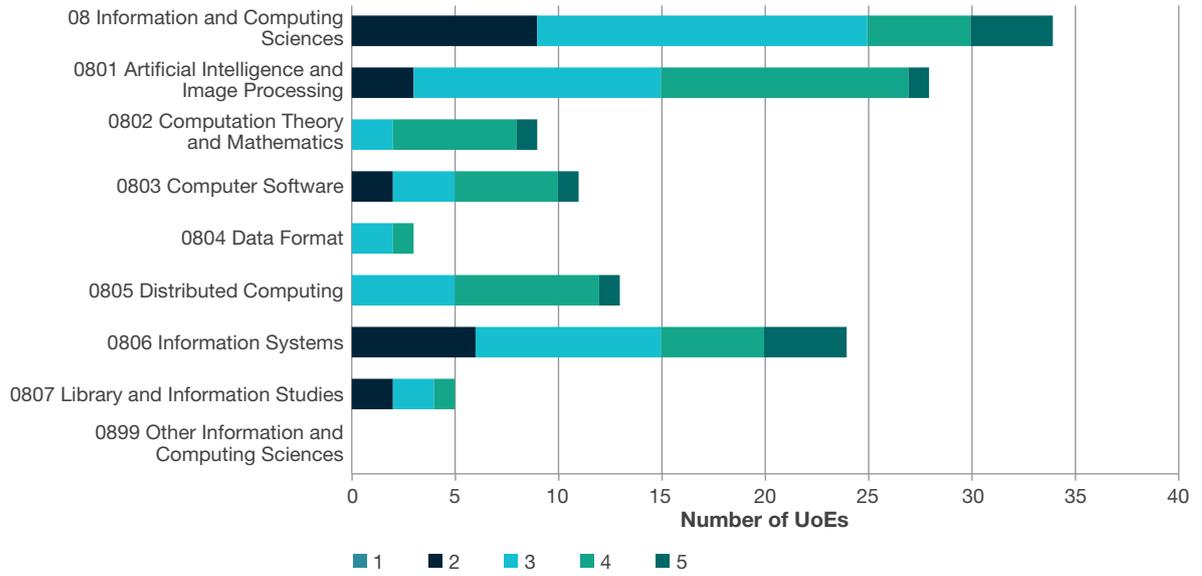

## FoR Overview

Information and Computing Sciences (08) accounted for approximately six per cent of the research outputs submitted to ERA 2015. Conference papers were the most common research output type (61 per cent). Artificial Intelligence and Image Processing (0801) contributed the highest amount of research outputs, research income, staff FTE and research commercialisation income.

Indicator	No.
Research outputs	24,856.6
Research income	\$248,350,121

# 09 ENGINEERING

Engineering is comprised of the following four–digit codes:

**0901 Aerospace Engineering**

**0902 Automotive Engineering**

**0903 Biomedical Engineering**

**0904 Chemical Engineering**

**0905 Civil Engineering**

**0906 Electrical and Electronic Engineering**

**0907 Environmental Engineering**

**0908 Food Sciences**

**0909 Geomatic Engineering**

**0910 Manufacturing Engineering**

**0911 Maritime Engineering**

**0912 Materials Engineering**

**0913 Mechanical Engineering**

**0914 Resources Engineering and Extractive Metallurgy**

**0915 Interdisciplinary Engineering**

**0999 Other Engineering**

**19 out of 34 two–digit UoEs and  
110 out of 143 four–digit UoEs  
assessed were rated above  
world standard**

## FoR Overview

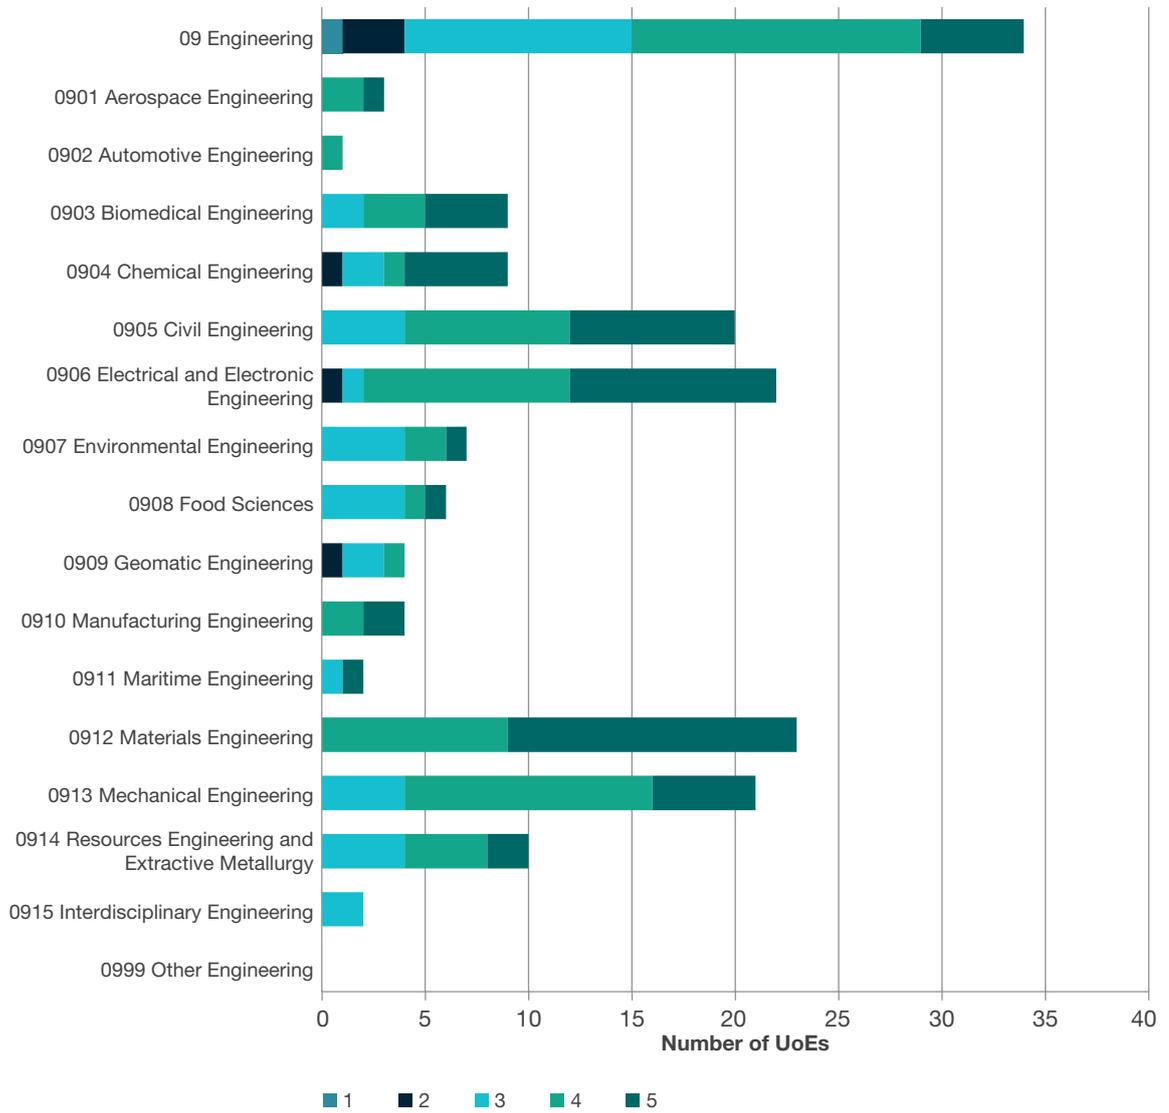

Engineering (09) accounted for approximately 13 per cent of the research outputs submitted to ERA 2015.

Approximately 31 per cent of the patents submitted to ERA 2015 were in Engineering. While journal articles were the predominant research output type (57 per cent), a large proportion of conference publications were also submitted to Engineering codes (39 per cent). Electrical and Electronic Engineering (0906) was the largest sub–discipline in terms of research outputs, staffing, research income, patents and research commercialisation income.

Indicator	No.

# 10 TECHNOLOGY

Technology is comprised of the following four-digit codes:

**1001 Agricultural Biotechnology**

**1002 Environmental Biotechnology**

**1003 Industrial Biotechnology**

**1004 Medical Biotechnology**

**1005 Communications Technologies**

**1006 Computer Hardware**

**1007 Nanotechnology**

**1099 Other Technology**

**9 out of 11 two-digit UoEs and  
19 out of 19 four-digit UoEs assessed  
were rated above world standard**

## FoR Overview

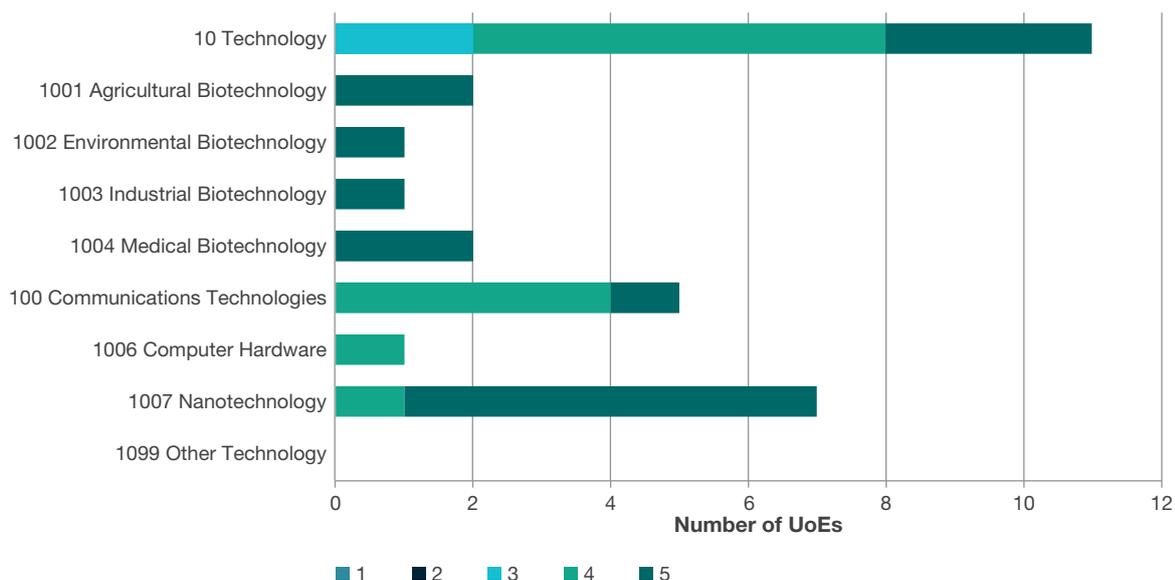

Technology (10) accounted for approximately one per cent of the research outputs submitted to ERA 2015.

Approximately five per cent of the patents submitted to ERA 2015 were from Technology. The most common research output types for Technology were journal articles (49 per cent), followed by conference papers (44 per cent). Communications Technologies (1005) and Other Technology (1099) were the two largest sub-disciplines in terms of research outputs, staff FTE and research income. Communications Technologies (1005) had the highest amount of research commercialisation income.

Indicator	No.
Research outputs	6,442.7

- 1117 Public Health and Health Services**
- 1199 Other Medical and Health Sciences**

26 out of 37 two-digit UoEs and 219 out of 274 four-digit UoEs assessed were rated above world standard

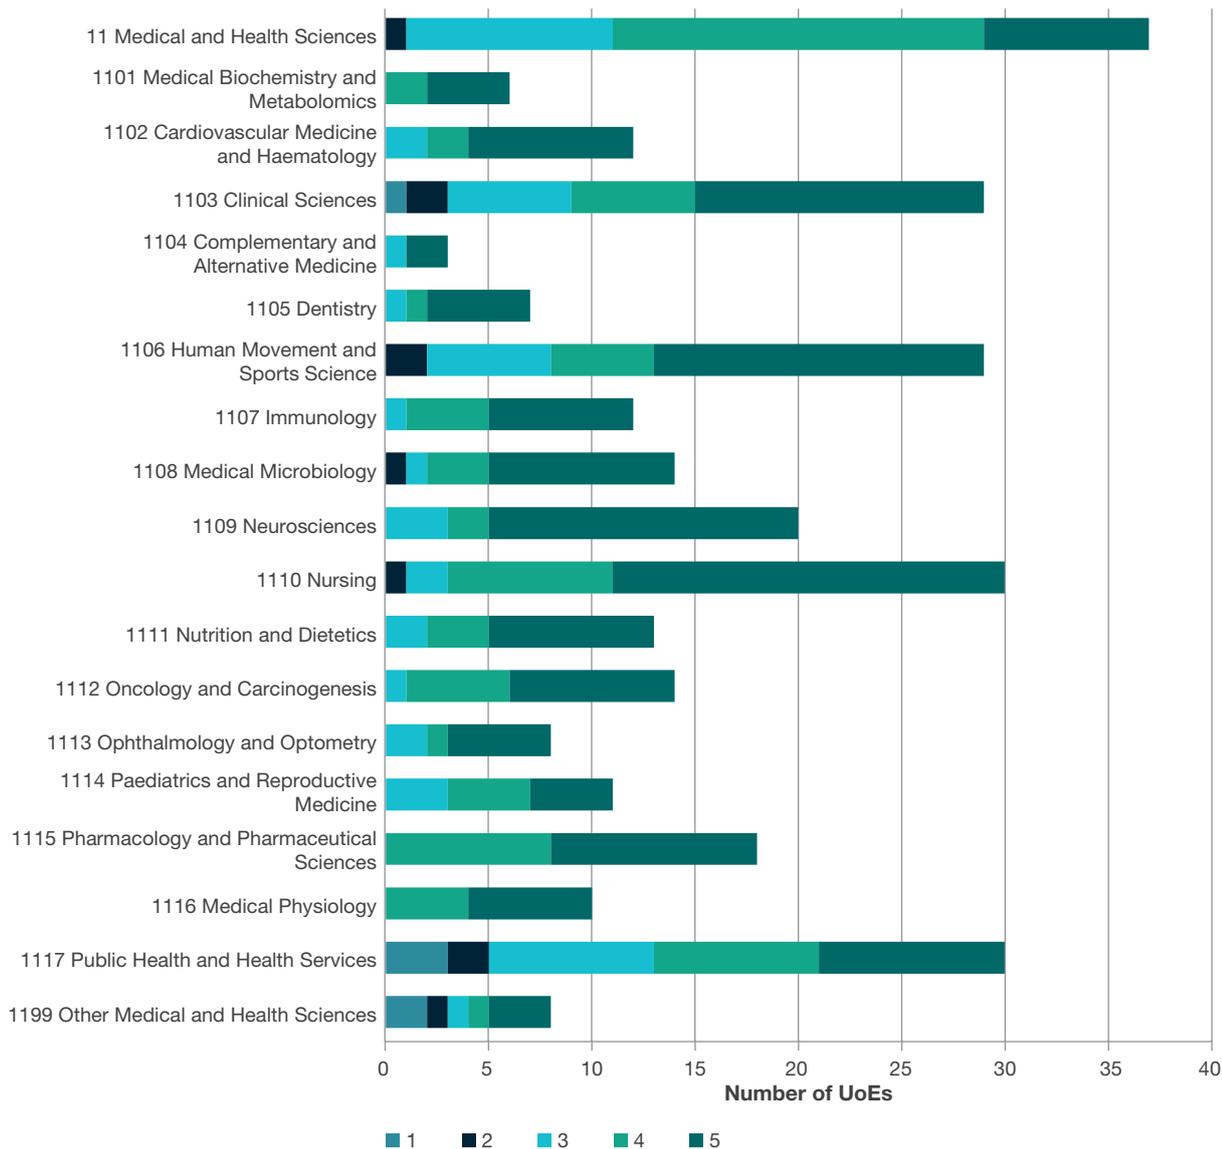

## FoR Overview

Medical and Health Sciences (11) accounted for approximately 21 per cent of the research outputs submitted to ERA 2015. Journal articles were the most common research output type in the Medical and Health Sciences (93 per cent). The two largest Medical and Health Sciences Disciplines for research outputs, research income and staff FTE were Clinical Sciences (1103) and Public Health and Health Services (1117). Research commercialisation income was particularly strong in Immunology (1107).

Indicator	No.
Research outputs	90,650.5

# 12 BUILT ENVIRONMENT AND DESIGN

Built Environment and Design is comprised of the following four-digit codes:

**1201 Architecture**

**1202 Building**

**1203 Design Practice and Management**

**1204 Engineering Design**

**1205 Urban and Regional Planning**

**1299 Other Built Environment and Design**

**3 out of 22 two-digit UoEs and 10 out of 44 four-digit UoEs assessed were rated above world standard**

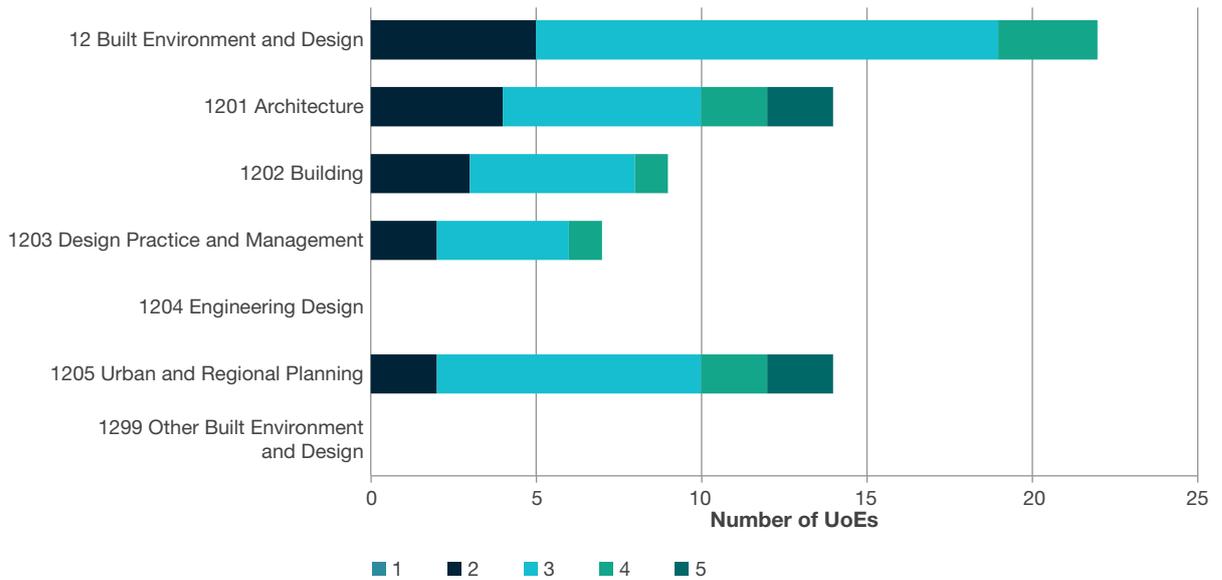

## FoR Overview

Built Environment and Design (12) accounted for approximately two per cent of the research outputs submitted to ERA 2015. Overall, conference papers were the most common research output type (37 per cent), followed by journal articles (33 per cent). Non-traditional research outputs comprised a high proportion of outputs in Architecture (1201) and Design Practice and Management (1203). Urban and Regional Planning (1205) and Architecture (1201) were the largest sub-disciplines by research output volume and research income. Design Practice and Management (1203) was the only four-digit code that submitted research commercialisation income.

# 13 EDUCATION

Education is comprised of the following four-digit codes:

**1301 Education Systems**

**1302 Curriculum and Pedagogy**

**1303 Specialist Studies in Education**

**1399 Other Education**

**8 out of 38 two-digit UoEs and  
20 out of 93 four-digit UoEs assessed  
were rated above world standard**

## FoR Overview

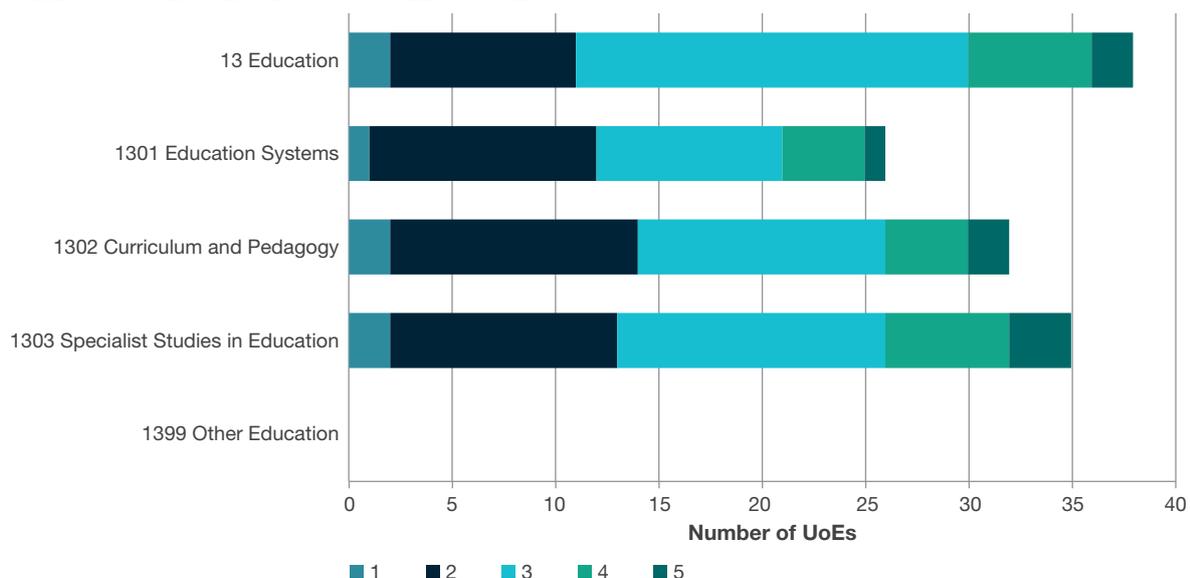

Education (13) accounted for approximately five per cent of the research outputs submitted to ERA 2015.

The most common research output type was journal articles (54 per cent), though the proportions of book chapters and conference paper were also high (22 per cent and 20 per cent respectively). Specialist Studies in Education (1303) was the largest Education sub-discipline in terms of volume of outputs, research income and staff FTE.

Education Systems (1301) had the highest amount of research commercialisation income.

# 16 STUDIES IN HUMAN SOCIETY

Studies in Human Society is comprised of the following four-digit codes:

**1601 Anthropology**

**1602 Criminology**

**1603 Demography**

**1604 Human Geography**

**1605 Policy and Administration**

**1606 Political Science**

**1607 Social Work**

**1608 Sociology**

**1699 Other Studies in Human Society**

**10 out of 39 two-digit UoEs and  
43 out of 121 four-digit UoEs assessed  
were rated above world standard**

## FoR Overview

Studies in Human Society (16) contributed approximately five per cent of the research outputs to ERA 2015.

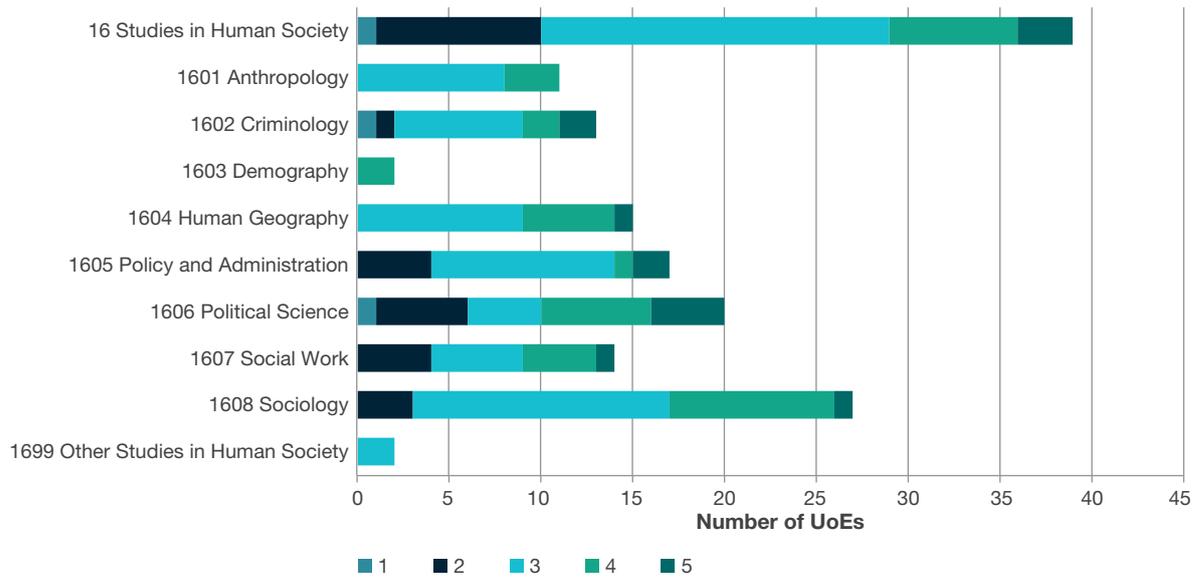

Journal articles were the most common research output type (58 per cent), followed by book chapters (29 per cent).

The three largest sub-disciplines in terms of research outputs, research income and staff FTE were Policy and Administration (1605), Political Science (1606) and Sociology (1608). No research commercialisation income was submitted to ERA 2015 for Studies in Human Society (16).

Indicator	No.
Research outputs	22,976.7

# 19 STUDIES IN CREATIVE ARTS AND WRITING

Studies in Creative Arts and Writing is comprised of the following four-digit codes:

**1901 Art Theory and Criticism**

**1902 Film, Television and Digital Media**

**1903 Journalism and Professional Writing**

**1904 Performing Arts and Creative Writing**

**1905 Visual Arts and Crafts**

**1999 Other Studies in Creative Arts and Writing**

**7 out of 36 two-digit UoEs and  
20 out of 70 four-digit UoEs  
assessed were rated above  
world standard**

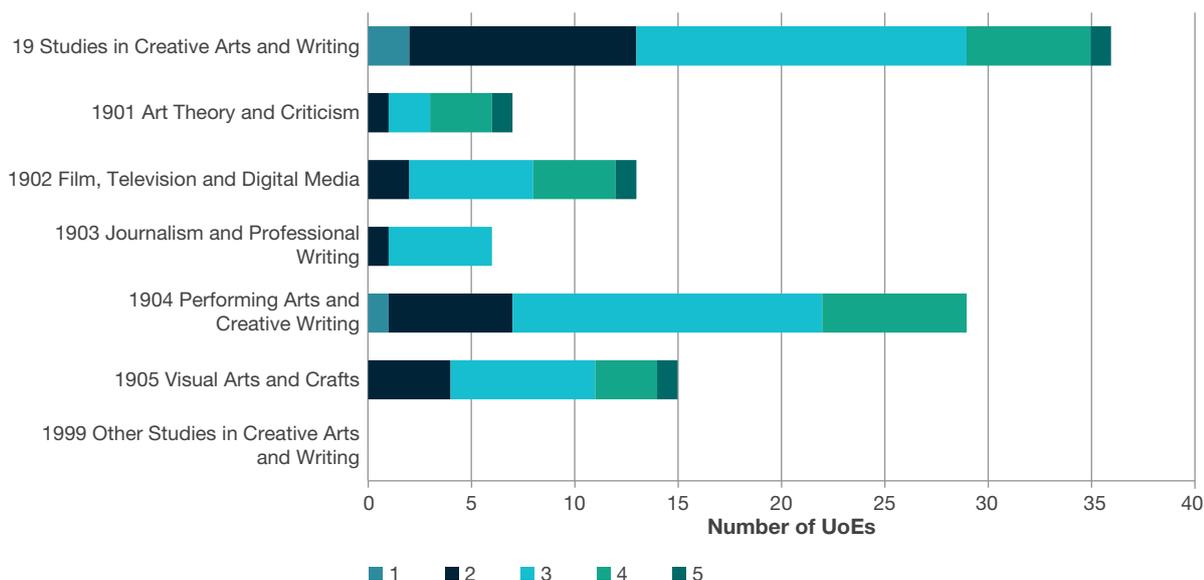

## FoR Overview

Studies in Creative Arts and Writing (19) contributed approximately three per cent of the research outputs to ERA 2015. Non-traditional research outputs were the main research output type (52 per cent), followed by journal articles (23 per cent). Performing Arts and Creative Writing (1904) was the largest sub-discipline in terms of research outputs, research income and staff FTE. Film, Television and Digital Media (1902) had the largest amount of research commercialisation income.

Indicator	No.

# 20 LANGUAGE, COMMUNICATION AND CULTURE

Language, Communication and Culture is comprised of the following four-digit codes:

**2001 Communication and Media Studies**

**2002 Cultural Studies**

**2003 Language Studies**

**2004 Linguistics**

**2005 Literary Studies**

**2099 Other Language, Communication and Culture**

**15 out of 33 two-digit UoEs  
and 43 out of 77 four-digit  
UoEs assessed were rated  
above world standard**

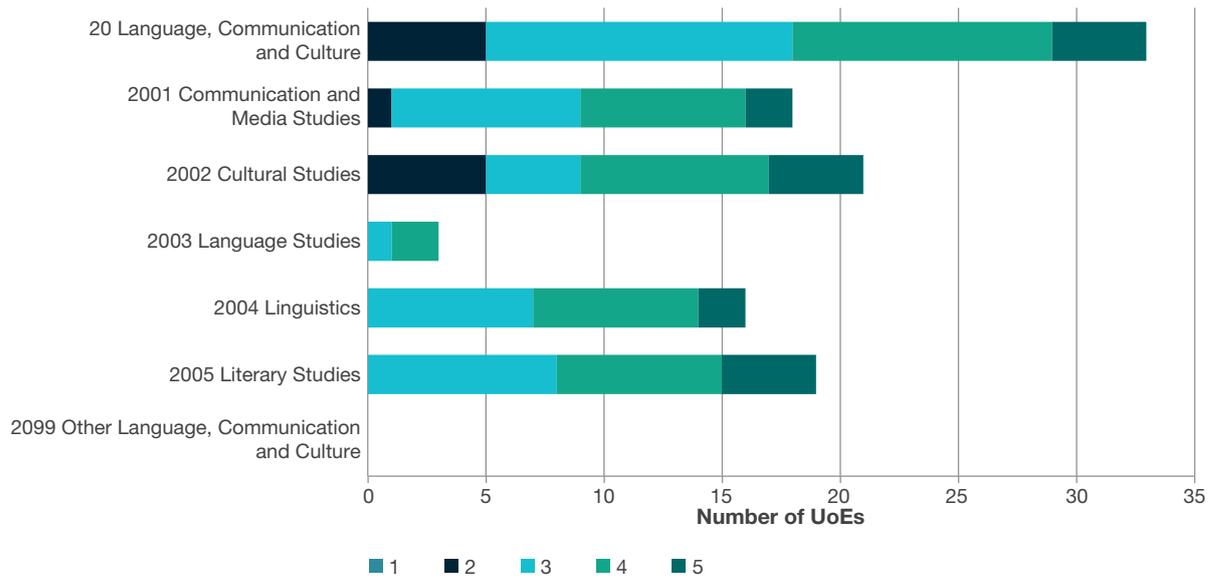

## FoR Overview

Language, Communication and Culture (20) contributed approximately three per cent of the research outputs to ERA 2015. While journal articles were the most common research output type (48 per cent), a significant proportion were book chapters (36 per cent). Cultural Studies (2002) and Literary Studies (2005) were the two largest disciplines in terms of research outputs and staff FTE. Linguistics (2004) had the largest amount of research income, whereas Communication and Media Studies (2001) had the largest amount of research commercialisation income.

Esteem	339
Patents Granted	347
Registered Designs	352
Plant Breeder's Rights	353
NHMRC Endorsed Guidelines	354
Research Commercialisation Income	355

**Section 4** provides detailed profiles of national ERA data by two- and four-digit FoR codes. Please note that there are differences in the applicability of indicators for each discipline. These are specified in the ERA 2015 Discipline Matrix, available from [arc.gov.au/era-2015-submission-documents](http://arc.gov.au/era-2015-submission-documents).

Where an indicator does not apply to a particular discipline, ‘–’ is shown. ‘0’ represents that the indicator applies to the discipline, but no data was submitted.

For each two- and four-digit FoR code the following data tables are provided:

## Research Outputs by Type

This table shows the number of research outputs submitted by output type. There are two broad groups of research output types:

1. Traditional: ‘book’, ‘book chapter’, ‘journal article’ and ‘conference paper’; and
2. Non-traditional: ‘curated or exhibited event’, ‘live performance’, ‘original creative work’, ‘recorded or rendered work’ and ‘research report for an external body’.

All disciplines were required to submit eligible traditional research outputs and eligible ‘research reports for an external body’ (a non-traditional research output type, applicable to all disciplines). All humanities, creative arts and social sciences disciplines were also required to submit other eligible non-traditional research outputs.

Non-traditional research outputs could be submitted as part of a ‘portfolio’. A ‘portfolio’ is a group of individual works which together constitute a single non-traditional research output. The portfolio submission was supported with information to demonstrate coherent research content.

Please note that all research outputs were submitted at the four-digit FoR code level. The two-digit FoR code level represents the aggregate of the outputs from the relevant four-digit FoR codes which sit beneath the two-digit FoR code.

## Research Outputs by Year

This table shows the number of research outputs submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for research outputs was 1 January 2008—31 December 2013. As a ‘portfolio’ can span multiple years, they are not included in yearly figures.

## HERDC Category 1 — Australian Competitive Grants Research Income

This table shows the total amount of HERDC Category 1 research income submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for research income was 1 January 2011—31 December 2013.

HERDC Category 1 income refers to income received from programmes listed on the Australian Competitive Grants Register. The HERDC Category 1 grants are highly competitive and have a strong element of peer review.

The 'median income' column shows the middle amount of Category 1 income submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period. The 'maximum income' column shows the highest amount submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period.

## HERDC Category 2 – Other Public Sector Research Income

This table shows the total amount of HERDC Category 2 research income submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for research income was 1 January 2011–31 December 2013.

HERDC Category 2 income refers to any other research income received from the Australian Government that is not eligible for inclusion as HERDC Category 1 research income. This includes income from both state and local governments.

The 'median income' column shows the middle amount of Category 2 income submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period. The 'maximum income' column shows the highest amount submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period.

## HERDC Category 3 – Industry and Other Research Income

This table shows the total amount of HERDC Category 3 research income submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for research income was 1 January 2011–31 December 2013.

HERDC Category 3 income refers to income from industry and other non-Australian government organisations. This category of income is broken down into three sub-categories: Australian, International A and International B (detailed below).

The 'median income' column shows the middle amount of Category 3 income submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period. The 'maximum income' column shows the highest amount submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period.

### HERDC Category 3 – Industry and Other Research Income (Australian)

HERDC Category 3 (Australian) income refers to contract, grant, donation, bequest and foundation income from Australian industry.

### HERDC Category 3 – Industry and Other Research Income (International A)

HERDC Category 3 (International A) income refers to competitive, peer reviewed grants for research from non-Australian industry or non-Australian government agencies including non-Australian industry collaborative research grants.

## HERDC Category 3 – Industry and Other Research Income (International B)

HERDC Category 3 (International B) income refers to income from non–Australian industry or governments that cannot be included in International A research income.

## HERDC Category 4 – CRC Research Income

This table shows the total amount of HERDC Category 4 research income submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for research income was 1 January 2011–31 December 2013.

HERDC Category 4 income refers to income received by Cooperative Research Centres (CRCs) in which the relevant institution is a core participant (i.e. a signatory to the CRC’s Commonwealth Agreement).

The ‘median income’ column shows the middle amount of Category 4 income submitted to ERA 2015 from an individual institution for an FoR code across the three–year reference period. The ‘maximum income’ column shows the highest amount submitted to ERA 2015 from an individual institution for an FoR code across the three–year reference period.

## Staffing Profile

This table shows the number of staff submitted to ERA 2015 as of the staff census date (31 March 2014). Both the ‘FTE’ (Full–Time Equivalent) and ‘Headcount’ figures are shown and correspond to the definition of staff outlined in the Higher Education Staff Data Collection Specifications. ‘FTE’ represents the time or workload of individuals employed while ‘Headcount’ represents the raw number of employees. ‘FTE’ is classified into staffing Levels A–E and Other while ‘Headcount’ is classified into ‘FTE’ (Levels A–E and Other), ‘Casual’ and ‘Other Appointment’.

## Esteem

This table shows the number of esteem measures submitted to ERA 2015 for the reference period. For ERA 2015, the reference period for esteem measures was 1 January 2011–31 December 2013.

Esteem measures indicate that a researcher is held in particularly high regard by their peers or other qualified parties. Eligible esteem measures for ERA 2015 included:

- › editor of a prestigious work of reference
- › membership of a learned academy and membership of AIATSIS
- › recipient of a nationally competitive research fellowship
- › membership of a statutory committee
- › recipient of an Australia Council Grant or Australia Council Fellowship.

The applicability of an esteem measure is dependent on the discipline.

## Patents Granted

This table shows the number of patents granted by country or type submitted to ERA 2015 for the reference period. For ERA 2015, the reference period for patents was 1 January 2011—31 December 2013.

Patents granted in Australia, United States, Europe, and Japan are reported in ERA 2015. Patents granted in other jurisdictions are grouped into the 'other international' category. Triadic patents are a series of corresponding patents filed at the European Patent Office (EPO), the United States Patent and Trademark Office (USPTO) and the Japan Patent Office (JPO), for the same invention by the same applicant or inventor. Institutions were required to identify patents that are essentially the same patent registered in more than one country—the 'patent family' column displays a set of unique patents.

## Registered Designs

This table shows the number of registered designs submitted to ERA 2015 for the reference period. For ERA 2015, the reference period for registered designs was 1 January 2011—31 December 2013.

A registered design is a right granted for new and distinctive designs. Once a registered design has been examined and certified, the owner has an exclusive right to use, license and/or sell the registered design, and to enforce it against an infringer.

Only eligible disciplines in 08 Information and Computing Sciences, 10 Technology, 12 Built Environment and Design, and 19 Studies in Creative Arts and Writing submitted registered designs to ERA 2015.

## Plant Breeder's Rights

This table shows the number of Plant Breeder's Rights (PBRs) submitted to ERA 2015 for the reference period. For ERA 2015, the reference period for PBRs was 1 January 2011—31 December 2013.

PBRs are proprietary rights held by breeders of certain new varieties of plants and fungi. Such rights are legally enforceable and give exclusive commercial rights to market a new variety or its propagating material for the duration of the PBR. For ERA 2015 purposes, PBRs were those granted under the *Plant Breeder's Rights Act 1994* (Cth) or their international equivalents.

Only eligible disciplines in the 05 Environmental Sciences, 06 Biological Sciences, 07 Agricultural and Veterinary Sciences, and 10 Technology submitted PBRs to ERA 2015.

## NHMRC Endorsed Guidelines

This table shows the number of National Health and Medical Research Council (NHMRC) Endorsed Guidelines submitted to ERA 2015 for the reference period. For ERA 2015, the reference period for NHMRC Endorsed Guidelines was 1 January 2011—31 December 2013.

Guidelines endorsed by the NHMRC and those on population health, clinical practice and ethics may be produced by groups external to the NHMRC, or developed by the NHMRC with the assistance of expert working groups.

Only eligible disciplines in 11 Medical and Health Sciences submitted NHMRC Endorsed Guidelines to ERA 2015.

## Research Commercialisation Income

This table shows the total amount of research commercialisation income submitted to ERA 2015 for each year of the reference period. For ERA 2015, the reference period for income was 1 January 2011—31 December 2013.

Research commercialisation income is defined as commercial returns via income and/or capital gains resulting from the commercialisation of research outputs, services and intellectual property. Under ERA 2015, research commercialisation income was treated as an 'applied measure' rather than as 'research income'.

The 'median income' column shows the middle amount submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period. The 'maximum income' column shows the highest amount submitted to ERA 2015 from an individual institution for an FoR code across the three-year reference period.

Two- and four-digit FoR codes for 18 Law and Legal Studies do not use research commercialisation income as an applied measure nor do some underlying four-digit codes in 11 Medical and Health Sciences.

**SECTION 5**

# ERA 2015 Institution Report

12 Built Environment and Design	386
13 Education	388
14 Economics	390
15 Commerce, Management, Tourism and Services	392
16 Studies in Human Society	394
17 Psychology and Cognitive Sciences	396
18 Law and Legal Studies	398
19 Studies in Creative Arts and Writing	400
20 Language, Communication and Culture	402
21 History and Archaeology	404
22 Philosophy and Religious Studies	406

**Section 5** provides the ERA rating for each two-digit and four-digit FoR code evaluated for the 41 eligible institutions.

The tables show the ratings for assessed UoEs. The UoE must meet the relevant low volume threshold for assessment to occur. Where the institution did not meet the low volume threshold, 'n/a' (i.e. not assessed) is shown in the table. In some cases UoEs were not rated ('n/r') by the Research Evaluation Committee due to coding issues.

The ERA 2015 Rating Scale is available in the introduction of this report.

Appendix 2 — ANZSRC Fields of Research (FoR) Codes	416

# Glossary and Appendices

# GLOSSARY

<b>Applied measures</b>	Applied measures for ERA 2015 include patents granted; registered designs; Plant Breeder's Rights; NHMRC endorsed guidelines and research commercialisation income.
<b>Apportioned (count)</b>	Institutions could apportion percentages of a research output submitted to ERA 2015 between one and three four-digit codes, to a total of 100 per cent. The minimum that an output could be apportioned to an FoR code was 20 per cent.
<b>Australia Council Grant or Fellowship</b>	Australia Council Grants and Fellowship programmes are an ERA esteem measure. They are characterised by a strong element of peer review, are open to applicants from any State or Territory, require a minimum tenure of two years full-time equivalent and are awarded to an individual.
<b>Cluster</b>	<p>A set of disciplines grouped specifically for the administrative purposes of the ERA 2015 evaluation. Clusters are made up of related two- and four-digit FoR codes. There is one Research Evaluation Committee (REC) for each cluster. The eight ERA 2015 discipline clusters were:</p> <ol style="list-style-type: none"> <li>1. Physical, Chemical and Earth Sciences (PCE)</li> <li>2. Humanities and Creative Arts (HCA)</li> <li>3. Engineering and Environmental Sciences (EE)</li> <li>4. Education and Human Society (EHS)</li> <li>5. Economics and Commerce (EC)</li> <li>6. Mathematical, Information and Computing Sciences (MIC)</li> <li>7. Biological and Biotechnological Sciences (BB)</li> <li>8. Medical and Health Sciences (MHS)</li> </ol>
<b>Commercialisation income</b>	See 'Research commercialisation income'.
<b>Curated or Produced Substantial Public Exhibitions and Events</b>	A type of non-traditional research output that is specifically aimed at research outputs produced by curators rather than artists. See section 5.4.9.6 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Discipline</b>	For the purposes of ERA 2015, disciplines were defined as two- or four-digit Fields of Research (FoR) codes, as identified in the <i>Australian and New Zealand Standard Research Classification (ANZSRC) 2008</i> . The ANZSRC is available at <a href="http://arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc">arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc</a> .
<b>Discipline Matrix</b>	The <i>ERA 2015 Discipline Matrix</i> specifies which ERA indicators apply to which disciplines. The <i>ERA 2015 Discipline Matrix</i> is available at <a href="http://arc.gov.au/era-2015-submission-documents">arc.gov.au/era-2015-submission-documents</a> .
<b>Eligible institutions</b>	Australian higher education providers eligible to participate in ERA, defined as Table A and B providers listed in the <i>Higher Education Support Act 2003</i> . A list of eligible institutions is provided at <b>Appendix 1</b> to this report.
<b>Eligible researcher</b>	A researcher who met the criteria specified at section 5.3.1 of the <i>ERA 2015 Submission Guidelines</i> (available from <a href="http://arc.gov.au/era-2015-submission-documents">arc.gov.au/era-2015-submission-documents</a> ).
<b>Employed</b>	For ERA 2015 purposes, the term 'employed' is used in the same sense as in the <i>Higher Education Staff Data Collection (HESDC) Specifications</i> . It is used to describe the status of an eligible researcher (as 'employed' or 'employed on a casual basis').
<b>Employee</b>	For ERA purposes, the term 'employee' is used in the same sense as in the <i>Higher Education Staff Data Collection (HESDC) Specifications</i> .
<b>ERA 2015 Submission Journal List</b>	A list of journals eligible for institutions' ERA 2015 submissions. Each journal is assigned to one or more disciplines defined by FoR code(s).
<b>ERA peer review</b>	Review conducted of a sample of research outputs by Research Evaluation Committees (RECs) and ERA peer reviewers as part of the ERA evaluation process.

<b>ERA peer reviewer</b>	Independent expert who undertakes ERA peer review of a sample of research outputs as part of the ERA evaluation process.
<b>Esteem measures</b>	Esteem measures indicate that a researcher is held in particularly high regard by their peers or other qualified parties. Eligible esteem measures for ERA 2015 included: editor of a prestigious work of reference; membership of a learned academy and membership of AIATSIS; recipient of a nationally competitive research fellowship; membership of a statutory committee; and recipient of an Australia Council Grant or Australia Council Fellowship. See Section 5.7 of the <i>ERA 2015 Submission Guidelines</i> for further details (available from <a href="http://arc.gov.au/era-2015-submission-documents">arc.gov.au/era-2015-submission-documents</a> ).
<b>Fields of Research (FoR)</b>	A hierarchical classification of research disciplines as set out in the Australian Bureau of Statistics <i>Australian and New Zealand Standard Research Classification (ANZSRC) 2008</i> . The term 'Fields of Research' or 'FoR' applies to all three ANZSRC levels (two-digit, four-digit and six-digit). Only two- and four-digit FoR codes are used for the purposes of ERA. The ANZSRC is available at <a href="http://arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc">arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc</a> .
<b>Four-digit FoR</b>	The middle level of the three hierarchical levels within the Australian Bureau of Statistics <i>Australian and New Zealand Standard Research Classification (ANZSRC) 2008</i> . An example of a four-digit FoR code is '0206 Quantum Physics'. The ANZSRC is available at <a href="http://arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc">arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc</a> .
<b>Full-time equivalent (FTE)</b>	FTE staffing profile based on academic salary classification, as used in HESDC. Includes Levels A–E and 'Other'.
<b>Higher Education Research Data Collection (HERDC)</b>	The Higher Education Research Data Collection is an annual data collection exercise undertaken by the Department of Education and Training.
<b>HERDC Category 1 (income)</b>	The type of research income addressed in HERDC research income Category 1, that is, grants listed on the Australian Competitive Grants Register (ACGR). See section 5.5.3.1 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>HERDC Category 2 (income)</b>	The type of research income addressed in HERDC research income Category 2, that is, public sector research income other than Australian Competitive Grants. See section 5.5.3.3 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>HERDC Category 3 (income)</b>	The type of research income addressed in HERDC research income Category 3, which consists of industry and other research income. For ERA purposes this income is disaggregated into the following three sub-categories: <ul style="list-style-type: none"> <li>› 3 (i) Australian</li> <li>› 3 (ii) International A (competitive, peer reviewed)</li> <li>› 3 (iii) International B (other international income).</li> </ul> See section 5.5.3.5 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>HERDC Category 4 (income)</b>	The type of research income addressed in HERDC research income Category 4. It comprises research income received by Cooperative Research Centres (CRCs) in which the relevant institution is a core participant (i.e. a signatory to the CRC's Commonwealth Agreement). See section 5.5.3.7 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Higher Education Staff Data Collection (HESDC)</b>	The annual staff data collection exercise that was undertaken by the Department of Education and Training.
<b>Indexed journal articles</b>	For ERA purposes, 'indexed journal articles' refers to articles published in journals listed in the <i>ERA 2015 Submission Journal List</i> that were indexed by the ERA 2015 citation data supplier, SciVerse Scopus.

<b>Learned Academies</b>	<p>Organisations whose individual or institutional members are devoted to the advancement of learning in one of three broad areas of knowledge: the natural sciences, humanities and social sciences. Eligible ‘membership of learned academies’ for ERA 2015 (esteem measures) included:</p> <ul style="list-style-type: none"> <li>› Australian Academy of Humanities</li> <li>› Australian Academy of Science</li> <li>› Academy of the Social Sciences in Australia</li> <li>› Australian Academy of Technological Sciences and Engineering</li> <li>› Australian Institute of Aboriginal and Torres Strait Islander Studies.</li> </ul>
<b>Live Performance of Creative Works</b>	<p>A type of non-traditional research output involving a public performance, including music, plays and dance. See section 5.4.9.4 of the <i>ERA 2015 Submission Guidelines</i> for further details.</p>
<b>Low volume threshold</b>	<p>Each discipline within an institution is only subject to ERA evaluation if a certain volume of research outputs has been submitted. For disciplines where citation analysis was used, the low volume threshold was 50 apportioned indexed journal articles. For disciplines where peer review was used, the low volume threshold was 50 apportioned research outputs. In peer review disciplines, for the purpose of calculating the low volume threshold only, books were given an effective weighting of 5:1 compared with other research outputs. See Section 3.6 of the <i>ERA 2015 Submission Guidelines</i> for more information.</p>
<b>Nationally Competitive Research Fellowship</b>	<p>Refers to a fellowship held during the esteem measures reference period, by an eligible researcher under a Category 1 programme listed on the Australian Competitive Grants Register (ACGR). Such fellowships are characterised by:</p> <ul style="list-style-type: none"> <li>› a highly competitive process open to applicants from any Australian State or Territory</li> <li>› a strong element of peer review</li> <li>› a minimum tenure of two years full-time equivalent.</li> </ul> <p>Further details can be obtained from section 5.7.2.5 of the <i>ERA 2015 Submission Guidelines</i>.</p>
<b>NHMRC Endorsed Guidelines</b>	<p>Guidelines endorsed by the National Health and Medical Research Council (NHMRC) including those on population health, clinical practice and ethics. They may be produced by groups external to the NHMRC, or else developed by the NHMRC with the assistance of expert working groups. See section 5.6.2.9 of the <i>ERA 2015 Submission Guidelines</i> for further details.</p>
<b>Non-traditional research outputs</b>	<p>Research outputs which do not take the form of traditional research books, book chapters, journal articles or conference publications. See section 5.4.9 of the <i>ERA 2015 Submission Guidelines</i> for further details.</p>
<b>Not assessed – low volume (n/a)</b>	<p>The unit of evaluation was not assessed because it did not have a sufficient volume of eligible research outputs to meet the low volume threshold.</p>
<b>Not rated (n/r)</b>	<p>Not rated due to coding issues.</p>
<b>Original Creative Works</b>	<p>A type of non-traditional research output, including visual art work, design/architectural work and textual work. See section 5.4.9.3 of the <i>ERA 2015 Submission Guidelines</i> for further details.</p>
<b>Other International (patents)</b>	<p>Patents that were granted in a country or region other than Australia, the United States, Europe or Japan.</p>
<b>Other Level</b>	<p>Where an eligible researcher cannot be assigned to one of the Full-Time Equivalent (FTE) levels A–E the researcher is classified as ‘Other’ level. This includes general staff and academics occupying management positions.</p>
<b>Patent</b>	<p>As defined in relevant legislation, a patent is a right granted for any device, substance, method or process which is new, inventive and useful. It is legally enforceable and gives the owner the exclusive right to commercially exploit the invention for the life of the patent. ERA 2015 applied measures include Australian standard patents (but not Australian innovation patents) and equivalent patents issued overseas. See section 5.6.2.3 of the <i>ERA 2015 Submission Guidelines</i> for further details.</p>

<b>Peer review</b>	See 'ERA peer review'.
<b>Plant Breeder's Rights (PBRs)</b>	As defined in relevant legislation, Plant Breeder's Rights (PBRs) are proprietary rights held by breeders of certain new varieties of plants and fungi. Such rights are legally enforceable and give exclusive commercial rights to market a new variety or its propagating material for the duration of the PBR. For ERA 2015 purposes, PBRs were those granted under the <i>Plant Breeder's Rights Act 1994</i> (Cth) or their international equivalents. See sections 5.6.2.1 and 5.6.2.2 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Portfolio</b>	A collection of individual items that are derived from the same underlying research endeavour but do not in themselves constitute a research output, which together constitute a single non-traditional research output. The portfolio must be able to demonstrate coherent research content. See section 5.4.9 of the <i>ERA 2015 Submission Guidelines</i> for further information.
<b>Prestigious work of reference</b>	A work of reference which is recognised as one of the best in its field or sub-field, and characterised by a rigorous refereeing process and high scholarly standards. Editor of a prestigious work of reference is an esteem measure for ERA 2015. See section 5.7.2.1 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Reassignment Exception</b>	Where a journal article has significant content (66% or greater) that could best be described by a particular four-digit FoR code, institutions could assign that code to the article, even if the <i>ERA 2015 Submission Journal List</i> does not assign that code to the journal in which the article was published. This is known as the 'reassignment exception'. See Section 5.4.3.1 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Recorded/ Rendered Creative Works</b>	The research component of this output is contained within the recording/rendering and includes research outputs such as audio/visual recording, performance, digital creative work, website, etc. See Section 5.4.9.5 of the <i>ERA 2015 Submission Guidelines</i> for more information about this non-traditional research output type.
<b>Reference periods</b>	The set time period during which research outputs were required to have been published, research income reported under HERDC etc., in order to be eligible for inclusion in ERA submissions. ERA 2015 reference periods vary according to the type of data being collected. ERA 2015 reference periods are listed in the introduction to this report.
<b>Registered design</b>	A registered design is an applied measure for ERA 2015. A registered design is a design registered under the <i>Designs Act 2003</i> (where 'design' refers to the overall appearance of the product including the shape, configuration, pattern and ornamentation, which, when applied to a product, give it a unique visual appearance). See section 5.6.2.5 and 5.6.2.6 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Research</b>	For the purposes of ERA, research is defined as the creation of new knowledge and/or the use of existing knowledge in a new and creative way so as to generate new concepts, methodologies, inventions and understandings. This could include synthesis and analysis of previous research to the extent that it is new and creative. For more information, see section 3.1 of the <i>ERA 2015 Submission Guidelines</i> .
<b>Research Commercialisation Income</b>	Institutions may provide information on research commercialisation income, which includes income resulting from licences, options and assignments (LOAs), including running royalties, cashed in equity and other types of income. Under ERA 2015, research commercialisation income is treated as an 'applied measure' rather than 'research income'. See section 5.6.2.7 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Research Evaluation Committees (RECs)</b>	The cluster-specific committees which undertook the ERA 2015 evaluations. Each committee included internationally-recognised members with expertise in research evaluation and broad discipline expertise. REC members are listed on the ARC website at <a href="http://arc.gov.au/era-2015-research-evaluation-committee-rec-members">arc.gov.au/era-2015-research-evaluation-committee-rec-members</a> .
<b>Research output</b>	Research outputs include books, journal articles, book chapters, conference papers and non-traditional research outputs.
<b>Research Reports for an External Body</b>	A research report for an external body is a written research output commissioned or solicited by an external body such as a government department or private company. See section 5.4.9.7 the <i>ERA 2015 Submission Guidelines</i> for further details.

<b>Staff census date</b>	For a researcher to be eligible for ERA, the researcher must have been employed by an eligible institution at the staff census date. The staff census date for ERA 2015 was 31 March 2014.
<b>Status</b>	This term describes the basis on which a researcher is considered affiliated with an institution for ERA purposes, and may be 'Employed', 'Employed on a Casual Basis', or 'Other Status'. See section 5.3.2.7 of the <i>ERA 2015 Submission Guidelines</i> for more information.
<b>Statutory committee</b>	Membership of recognised statutory committees is an ERA esteem measure for certain disciplines. Statutory committees are recognised by Commonwealth Government agencies, including the National Health and Medical Research Council, and The United Nations, including the World Health Organization. See section 5.7.2.7 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>Traditional research outputs</b>	Research outputs in the form of published research books, book chapters, journal articles or conference papers.
<b>Triadic patents</b>	Triadic patents are patents that are a series of corresponding patents filed at the European Patent Office (EPO), the United States Patent and Trademark Office (USPTO) and the Japan Patent Office (JPO), for the same invention by the same applicant or inventor.
<b>Two-digit FoR</b>	The highest of the three hierarchical levels as identified in the Australian Bureau of Statistics <i>Australian and New Zealand Standard Research Classification (ANZSRC) 2008</i> . An example is '02 Physical Sciences'. The ANZSRC is available at <a href="http://arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc">arc.gov.au/australian-and-new-zealand-standard-research-classification-anzsrc</a> .
<b>Unit of Evaluation (UoE)</b>	A discipline, as defined by a two- or four-digit FoR code, for a specific eligible institution. In some contexts, the term refers to the package of associated ERA information (including submission data, indicators and evaluation outcomes). See section 3.3 of the <i>ERA 2015 Submission Guidelines</i> for further details.
<b>UoEs assessed</b>	Units of Evaluation (UoEs) that have met the low volume threshold and have been assessed by Research Evaluation Committees (RECs).
<b>Weighted research outputs</b>	For the purposes of determining the low volume threshold for peer review disciplines, books were given an effective weighting of 5:1 compared with other research outputs (such as journal articles).
<b>Whole (count)</b>	The ERA methodology provided both apportioned and whole counts of research outputs, i.e. an output apportioned 20 per cent to an FoR code would have an apportioned count of 0.2 and a whole count of 1 in that FoR code.

# APPENDIX 1 — ELIGIBLE INSTITUTIONS

Australian higher education institutions eligible to participate in ERA 2015 are defined as Table A and B providers listed in the *Higher Education Support Act 2003*.

<b>Australian Catholic University</b>	<b>The Australian National University</b>
<b>Batchelor Institute of Indigenous Tertiary Education</b>	<b>The University of Adelaide</b>
<b>Bond University</b>	<b>The University of Melbourne</b>
<b>Central Queensland University</b>	<b>The University of New England</b>
<b>Charles Darwin University</b>	<b>The University of New South Wales</b>
<b>Charles Sturt University</b>	<b>University of Newcastle</b>
<b>Curtin University of Technology</b>	<b>The University of Notre Dame Australia</b>
<b>Deakin University</b>	<b>The University of Queensland</b>
<b>Edith Cowan University</b>	<b>The University of Sydney</b>
<b>Flinders University</b>	<b>The University of the Sunshine Coast</b>
<b>Griffith University</b>	<b>The University of Western Australia</b>
<b>James Cook University</b>	<b>University of Ballarat<sup>2</sup></b>
<b>La Trobe University</b>	<b>University of Canberra</b>
<b>Macquarie University</b>	<b>University of South Australia</b>
<b>MCD University of Divinity<sup>1</sup></b>	<b>University of Southern Queensland</b>
<b>Monash University</b>	<b>University of Tasmania (incorporating Australian Maritime College)</b>
<b>Murdoch University</b>	<b>University of Technology, Sydney</b>
<b>Queensland University of Technology</b>	<b>University of Western Sydney</b>
<b>RMIT University</b>	<b>University of Wollongong</b>
<b>Southern Cross University</b>	<b>Victoria University</b>
<b>Swinburne University of Technology</b>	

<sup>1</sup> Currently known as the *University of Divinity*

<sup>2</sup> Currently known as *Federation University Australia*

# APPENDIX 2 — ANZSRC FIELDS OF RESEARCH (FOR) CODES

FoR Code	FoR Name	ERA Cluster Name
<b>01</b>	<b>Mathematical Sciences</b>	<b>Mathematical, Information and Computing Sciences</b>
0101	Pure Mathematics	Mathematical, Information and Computing Sciences
0102	Applied Mathematics	Mathematical, Information and Computing Sciences
0103	Numerical and Computational Mathematics	Mathematical, Information and Computing Sciences
0104	Statistics	Mathematical, Information and Computing Sciences
0105	Mathematical Physics	Mathematical, Information and Computing Sciences
0199	Other Mathematical Sciences	Mathematical, Information and Computing Sciences
<b>02</b>	<b>Physical Sciences</b>	<b>Physical, Chemical and Earth Sciences</b>
0201	Astronomical and Space Sciences	Physical, Chemical and Earth Sciences
0202	Atomic, Molecular, Nuclear, Particle and Plasma Physics	Physical, Chemical and Earth Sciences
0203	Classical Physics	Physical, Chemical and Earth Sciences
0204	Condensed Matter Physics	Physical, Chemical and Earth Sciences
0205	Optical Physics	Physical, Chemical and Earth Sciences
0206	Quantum Physics	Physical, Chemical and Earth Sciences
0299	Other Physical Sciences	Physical, Chemical and Earth Sciences
<b>03</b>	<b>Chemical Sciences</b>	<b>Physical, Chemical and Earth Sciences</b>
0301	Analytical Chemistry	Physical, Chemical and Earth Sciences
0302	Inorganic Chemistry	Physical, Chemical and Earth Sciences
0303	Macromolecular and Materials Chemistry	Physical, Chemical and Earth Sciences
0304	Medicinal and Biomolecular Chemistry	Physical, Chemical and Earth Sciences
0305	Organic Chemistry	Physical, Chemical and Earth Sciences
0306	Physical Chemistry (Incl. Structural)	Physical, Chemical and Earth Sciences
0307	Theoretical and Computational Chemistry	Physical, Chemical and Earth Sciences
0399	Other Chemical Sciences	Physical, Chemical and Earth Sciences
<b>04</b>	<b>Earth Sciences</b>	<b>Physical, Chemical and Earth Sciences</b>
0401	Atmospheric Sciences	Physical, Chemical and Earth Sciences
0402	Geochemistry	Physical, Chemical and Earth Sciences
0403	Geology	Physical, Chemical and Earth Sciences
0404	Geophysics	Physical, Chemical and Earth Sciences
0405	Oceanography	Physical, Chemical and Earth Sciences
0406	Physical Geography and Environmental Geoscience	Physical, Chemical and Earth Sciences
0499	Other Earth Sciences	Physical, Chemical and Earth Sciences
<b>05</b>	<b>Environmental Sciences</b>	<b>Engineering and Environmental Sciences</b>
0501	Ecological Applications	Engineering and Environmental Sciences
0502	Environmental Science and Management	Engineering and Environmental Sciences
0503	Soil Sciences	Engineering and Environmental Sciences
0599	Other Environmental Sciences	Engineering and Environmental Sciences
